

SHRSS Adobe Knowledge Transfer — Consolidated Transcripts

Session: Jobs — 2026-02-10

SHRSS Adobe Knowledge Transfer-20260210_130301-Meeting Recording

February 10, 2026, 6:03PM

1h 53m 23s

Lucas Nelson started transcription

Lucas Nelson 0:11 All right folks, thanks for joining this afternoon and being patient while we've been working out the the logistics to to get these knowledge transfer sessions on the calendar and I think we're we're in a good enough consensus between Adobe and SHRSS leadership that we can get these. These started. So given that Daniela T is going to be running this session, I think we're putting the early sessions with a focus on careers, you know, with the jobs components that we have. Given the careers work stream that's happening in parallel. So with that, Daniela, is there anything else you need me to kick off before you start?

Daniela Tea 0:56 I think Luke, if we just want to remind everyone that for the end of these sessions we'll be having essentially like a gap analysis phase, if you just want to mention that really quickly.

Lucas Nelson 1:10 Yeah, no, that's a good point. Both individually to Daniella. It's worth noting on these calls that we're going to have, we'll get through our material that Daniella has, you know. Created and and reviewing with you guys and we'll have each session will have a a little bit of a retrospective Q&A for one. But what Danielle is talking about as well is the intention at the end of these knowledge transfer sessions. Is that that there there's a oh, I heard some back feed. Sorry. OK, cool. At the at the end of these knowledge transfer sessions the the last week or so of the seven week schedule. We're going to be supporting you know Seminole Hard Rock you you guys with with with filling in the backlog for gaps and noted functionality that that you you would have documented from having these this baseline knowledge transfer. Work stream that we have so so we we can put together together the you know full list or as comprehensive as a list as we can of the of the gaps that the platform doesn't currently have implemented.

Daniela Tea 2:17 Yeah.

Scott Sorel 2:21 Yes.

Lucas Nelson 2:35 And so that's the, that's the intention that we want to get to the desired outcome from these knowledge transfer sessions. So Danielle, thanks for calling that out. And if there's other questions on that, Scott, as we're going through these sessions, you and I can work to, you know, make sure we address them. OK, Scott.

Scott Sorel 2:55 Yes, Sir.

Lucas Nelson 2:57 Alrighty, Danielle, anything else before I hand it to you?

Daniela Tea 3:01 Yep, I think we're good to go. So let me go ahead and share my screen and we can get started. Um, let's confirm.

Lucas Nelson 3:03 Alright, thanks.

Daniela Tea 3:09 If you guys can just confirm you guys can see my screen, we should be looking at a Confluence page.

Lisa Cardia 3:16 Yes.

Scott Sorel 3:17 Yep, looks good to me.

Daniela Tea 3:18 Perfect. Thank you guys. All right. So thank you everyone. Good afternoon. Today what we have planned is to review the job-related components specifically because we are aware of the fact that the careers website, the intention is to have that to be going live sometime next month. I know.

Scott Sorel 3:19 Yeah.

Daniela Tea 3:38 That currently it's in the QA phase with SHRSS team. So today what we'll be reviewing are those job components as well as the job content fragment, which is the data source for essentially all of these components. Earlier this week I had also posted. Some additional agenda items for some future sessions. To be clear, the reason why we I selected these here is because I wanted to make sure that we had time to really get into the content fragment driven components. So we will have of course additional agendas, additional sessions which will cover other items. Want to make sure that you were aware that the items I'm trying to prioritize first in these this first week of sessions are things related to content fragments. So taking a quick quick look at this Confluence page, the other thing I wanted to call out is that what our intention is, is we understand that you may have questions about the components or you know, just just some some things you might need to verify with us. And what we're asking you to do is if you are able to come up with those questions during the session or if we run out of time, we would

like for you to gather those questions within the specific Confluence page for that session. So for example, anything that you may think of when it comes to jobs while like say you're eating dinner tonight or something if you could. Please just add a comment to this page. What our team will be doing is we will be reviewing the questions and our goal is to be able to either answer them directly within this Confluence page or if it's something that needs to be, say, demonstrated further, then we want it to allocate some time. Just going to go to this next. Agenda here allocate some time at the beginning of each future session to to review those questions and and make sure that you get those updates. So that's what we're just asking for this team here is any questions that you may have, please make sure to add it to the specific Confluence page. All right. OK, so let's go ahead and get started. I am now going to navigate to the stage environment. And we're going to take a look at our jobs content fragment. All right, so here I am in stage and I'm going to go to Assets and Files and I'm going to go to the SHRSS folder. And then the content fragments folder. Here we can see here there is a folder called jobs and what I wanted to point out is that this jobs folder will contain all of the jobs that are coming in from Workday. So what you see here are essentially a folder structure. That will show, say, like the country US, you'll see like the state, in this case Florida, and then you'll see the location or the property name. And then from underneath there will be all those related job postings for that specific location. So to be clear, all this here that you see is actually coming. In from Workday, this is not something that an author has created. So in terms of like adding a new job post or something, my understanding is that this is supposed to be from Workday and so this you'll see here that this will continuously be modified and published as the sync is being run from the connection. Between Workday and AEM. So you might notice that some folders do not have anything in them, and that's because what might have happened is there were previously jobs for this location. However, those jobs may have been removed in Workday for whatever reason, so the folder structure will still be intact in AEM. However, the job postings content fragments will no longer be available. And to be clear, we're on the stage environment and right now we are connected to, I believe, the QA API for Workday. So these jobs, of course, there's certainly much more jobs available. Once we make the connection to prod, however, right now down in stage and as the QA team is doing their testing, you're going to see a a much smaller subset of jobs. So this will certainly be much bigger once we go to production. Right, so now I'm just going to navigate to a folder and I'm just using Tampa because I was looking at this earlier and there's multiple jobs. I'm going to open up one of these content fragments, so selecting it and then clicking on edit. OK. And let's take a look at each of these different fields. Some of these fields again are going to be coming from Work Day and some of these are actually going to be something that the author would consider updating. So let's walk through each one of these. And then what we'll do is we will map these fields to some of

these job components to see how the information is actually being displayed to the end user. So I'm actually going to zoom in just a little bit so everyone can see. All right. So we see here the job ID, job unique ID. These are coming in from Workday. Here we have our image field. This is something that is not going to come from Workday and it's something that's going to be inputted by the author.

Don Middlebrook 9:12 OK.

Daniela Tea 9:14 There is a way, yes.

Mayte Eme 9:14 Question you have two ID's. You have job unique ID and then you have job ID. Which one are you using?

Daniela Tea 9:24 So right now this is both information coming in from Workday. What's being displayed to the end user is going to be the job ID.

Mayte Eme 9:31 OK, that's the wrong one.

Daniela Tea 9:33 So that I'm aware that there is a ticket, I believe that mentions the job ID. This is something that I believe our developers have taken a look at. So if that needs to be updated, that is something that will be handled with that ticket.

Mayte Eme 9:48 OK, and then this image thing you meant that's not mapped to pick up automatically the right image like we currently have right now.

Daniela Tea 9:57 So right now what I'm showing you is the actual image field within the content fragment. Later on in this session, we're going to take a look at the image configuration page where you would be able to set up the images for all the locations in advance. However, keeping in mind that we are aware that in some instances. Images might need to be overwritten by the author and or. We've also seen on the live site itself that some some job job postings do not have images at all. So this here is a way for the author to be able to overwrite whatever is coming from that configuration page and or remove an image entirely if that is desired.

Mayte Eme 10:38 OK. Thanks.

Daniela Tea 10:39 Yep, we'll take a look at that image configuration page shortly. Yep. OK, so let's keep going down to the remaining fields that we have in our content fragment. So we see here.

Lisa Cardia 10:50 But Daniella, sorry, sorry to interrupt, but regarding the image, how you said we have the option to override and I am aware that there's the mapping with the configurations. Does the override replace the image we see on the card and the listing or just the card? if we if we choose to override it.

Daniela Tea 11:10 If you choose to override it, it should update the image that's used in the job listings component, which is the cards I believe you're referencing, and then also the job search component which lists the results as like longer horizontal cards.

Lisa Cardia 11:26 OK, all right. Something we'll take back then because we typically do two different like logo on listings, property shot on let's say homepage and the hiring events page. So just want to make or hot jobs page I guess because that's what's pulling in.

Daniela Tea 11:27 So that's so this is Yep. OK.

Lisa Cardia 11:42 So I'll just note that and we can move forward. Thanks.

Daniela Tea 11:42 OK. Okay, sure. All right.

Mayte Eme 11:46 And one more thing when because this there's a sync right that I guess runs every so often. If there's an update to the job and you've over reading something, I assume that doesn't get updated again after the sync or we lose the override.

Daniela Tea 11:52 Yes. So the only fields that get over that would OK, so just to be clear, anything that's coming from workday. So we're going over those workday fields, those will get overwritten by workday. However, the field say for example image and then another field down here for hot job and the LD JSON field we've seen on our content fragments, these. These are not fields that are coming in from Workday. So if you set this or if you put an image, nothing from Workday will overwrite that. However, if you try to say add additional content here or any of these other fields then that will get overwritten by Workday.

Ramona Harris 12:36 Daniella, a quick question. As far as the size for the logo image, I see two different sizes. What is the standard size of the logo that should be uploaded?

Daniela Tea 12:45 Yeah. So that is still information that I think we would need to get back to you on. As of right now, we were using, I believe, whatever was already in the dam for the Sage website. So we don't have those exact measurements at this moment.

Ramona Harris 13:02 OK.

Daniela Tea 13:04 It. OK, so let's keep going here. So as mentioned earlier, these other fields, job title, job portal, URL, etcetera, all the way up to here are going to be coming in from Workday. You'll notice this toggle that says is API data. This is signifying that this. Particular content fragment is something that's coming in from Workday, and so again, it's going to overwrite this information. When we've initially wrote the requirements for jobs content, we were informed that

there have been some instances where say a job. Not necessarily like a job that would be coming in from Workday or ISIMs

in your current instance, but you might need to have a job posting that's created by an author. If that's the case, you can. You do have the ability to do that. This would not be turned on because this is not. This is not coming in from any sort of API. However, that was one of the use cases that we have previously heard when we were documenting requirements. So to be clear, you can create a job as an author. However, these are here that we all see currently right now within stage are all going to be jobs that are coming in from. Work day.

Mayte Eme 14:22 And how would you do that? Do you just?

Daniela Tea 14:26 So if you just wanted to create a new job yourself, you can do create and then do content fragment and then you could select jobs with the title test job CF create.

Mayte Eme 14:26 Uh.

Daniela Tea 14:41 And then you would just fill out all that information yourself.

Mayte Eme 14:46 And is there any feed of the category so it goes with the other ones? So you have to know them. Those are not drop downs, right?

Daniela Tea 14:54 These are not dropped up, correct. These are not drag downs because these were the under. The understanding is that these are supposed to be coming in from work day. So if you did need to match something, you would need to make sure that you had the exact category like in this case casino sales.

Mayte Eme 15:10 OK, so you have OK.

Daniela Tea 15:12 Mhm. Hang on a second. OK, sorry, something from teams just popped up. All right, so let me go back to.

Mayte Eme 15:21 Is there? Sorry to ask again, but just checking. Is there a schedule? Like if you're adding a job, as soon as you publish, it goes live. There's no scheduling, right?

Daniela Tea 15:24 Yep. So if you have published, I'm going to click on publish here. You can see there's the now functionality and then there's the schedule. So when you click on schedule and you can have the activation date. So and to be clear though, I might say and because these are all coming in from workday, they do get published as they're like.

Mayte Eme 15:38 Oh. Um. Oh.

Daniela Tea 15:51 Coming into AEM, but I guess are you asking specifically for like a like a authored content fragment? OK, yeah, so you do have the ability to to schedule content fragments, but in the case of jobs, anything from Workday is going to get published without any intervention from the author. Like you can see this just got.

Mayte Eme 15:53 Mhm.

Daniela Tea 16:10 Modified 6 minutes ago is another one and published 6 minutes ago because it's coming in from that API.

Mayte Eme 16:17 And they drop off based on workday, right? If it's manual, there's no drop off. You have to manually delete it.

Daniela Tea 16:24 That is correct, yes.

Lucas Nelson 16:26 Gonzalo has his hand up, Daniella.

Daniela Tea 16:27 Yeah, go ahead, Gonzalo.

Gonzalo Calasich (SHRSS)** 16:33 Hi, can you guys see me?

Daniela Tea 16:34 Yes.

Gonzalo Calasich (SHRSS)** 16:36 Yeah, following on my test question. So so the the way this process works is that you wipe out all the job postings every time that you do a sync.

Daniela Tea 16:51 Sorry, cause I'll what was the sorry, what was the question?

Gonzalo Calasich (SHRSS)** 16:54 Once again, so every time that you do a sync from work day, do you delete all the job postings from Adobe?

Daniela Tea 17:01 Oh, are you talking like, does an author have to manually delete all of this? Is that what you're asking?

Gonzalo Calasich (SHRSS)** 17:06 No, what I'm trying to understand, for example, let's say when a job is no longer active and should no longer should be showing the website, I mean that that needs to happen from work day. So let's say this work, this, this job posting is already fulfilled and work day they will do a change.

Daniela Tea 17:11 Oh. Yes, that. Hmm.

Gonzalo Calasich (SHRSS)** 17:23 And that will not be part of the sync. So that means that next time the sync runs, that job will automatically be removed, correct?

Daniela Tea 17:32 That is correct, yes. And I'm not sure if you if you were part of the discussion earlier, but for example, like this innocally folder is here, but there's no jobs underneath. When this was initially set up, there were likely going to be there were likely jobs that were here. So just

to be clear, do we not set up any of these? These are coming. Directly from Workday, so the folder structure will remain intact, but the job postings will come and go depending on what is happening in Workday.

Gonzalo Calasich (SHRSS)** 18:02 OK. Thank you.

Daniela Tea 18:03 I am going to now go back to our content fragment and I want to just also highlight one thing that you could see here. What I'm showing here right now is the city, the state, the country. And I'm just going to drag it to the right and have the folder structure here on the left. So as you can see, the way that this folder structure was set up is based off of the information that's being that was coming in for this particular job. So we can see here US job location country US you can see FL FL is the state and then for the city is Tampa and so Tampa is right here and that's why this particular job 6150. Here is located in there. So every single job post that you see here is going to be sorted based off of their country, state and then city. So that's how this was created. Alright.

Mayte Eme 19:06 One more question about this thinking. There's been situations where we had to remove a job. It takes a while for ISAMS to do it. I don't know about workday, but we had to immediately hide it from the website. Is there that? Do we have an option to do that?

Daniela Tea 19:22 So. An author could technically delete a job, but to be clear, because of the sync and it's going to constantly republish, that's obviously not a viable solution. So your question is, would you be able to say say this particular job is no longer something that you need to show right now? And and you want to make sure it's hidden. At the moment, I don't think you would be able to just simply remove it because the sync is continuous and the expectation is that all of the changes would be coming in through work day versus happening in AM.

Mayte Eme 20:00 Right. But there's been situations that it takes a while, especially on weekends, right, to remove a job where they won't reply until Monday or you can get hold of somebody and we need to remove that posting. So we can do that in cycle, but seems an E and we we don't have that yet.

Daniela Tea 20:15 Yeah. So Macy, let me check with the development team to see if like for example, if we were to say turn off the as API data, is that something that could potentially say freeze the sync? So let me check in with our development team tomorrow. We can capture this as a question and then in our next session I can get back to you on their response.

Mayte Eme 20:35 OK, it doesn't happen quite often, so don't like freak out, but it's happened enough that we had to do those emergency things that wouldn't.

Daniela Tea 20:35 Once. Yeah, understood. Right. And sorry, just out of out of curiosity, curiosity might say who who updates the jobs and work like is that your team or is that a completely different team?

Mayte Eme 20:58 Well, before it.

Ramona Harris 20:59 That would be me, Danielle.

Daniela Tea 21:01 But sorry, who was speaking? Sorry, I couldn't see.

Ramona Harris 21:05 Oh, no, that would be me.

Lisa Cardia 21:06 Yeah, so well, so Mona, yeah, yeah, I'd I'd say the content team does part of the equation, which is getting a a hiring event and a hot job posted on the home page as well as where it feeds into the other two pages.

Daniela Tea 21:06 OK.

Mayte Eme 21:07 Yes, it will be Lisa's team week.

Daniela Tea 21:21 Uh.

Lisa Cardia 21:21 But our team doesn't manage any of the actual work today job postings.

Ramona Harris 21:27 Right.

Daniela Tea 21:27 OK. OK. So so basically like all this information that's coming in from Work Day, that's not your your team's responsibility, Lisa, but making sure it's appearing on certain pages like displaying as like a card that is your team's responsibility, is that right?

Lisa Cardia 21:28 Right.

Mayte Eme 21:42 No, Lisa's team. I mean, yes and no. Yes, of course they're supposed to make sure they're they're displayed, but she does. She's not responsible for functionality, right? She's just making sure the events, the hot jobs are tagged properly, but making sure these plays that will be product, right? Which we don't own this yet, so I would say IT.

Lisa Cardia 21:42 Correct. Oh, well, yeah.

Daniela Tea 21:44 Oh. Uh.

Mayte Eme 22:01 Until it's transferred.

Daniela Tea 22:06 OK. All right. OK. So we'll get back on that question about the the, the not as common edge case, but still something that you guys have seen Mayte where you need to remove a job. I'll get back to you guys on on that for tomorrow. Now what I want to do is essentially show how this content fragment is

going to display within our job components. So I am going to switch over just to a page that I created. This is within the careers section of the site. And so what I'm going to do is I'm going to go through this page, but we can also create a brand new page and add these components as well so you can see how they look like when you are initially configuring. But for this particular purpose, I do want to show how these fields map to something that's already configured. OK, so this here is our job search component. We have 1/2, just counting how many components we have 3-4. We have four different job components which is dependent on this content fragment. So the job listing one as we know is on the I'm sorry, the job search component as we know is on the search page. So let's take a look at what our content fragment maps to. So here we have the job ID which is currently being posted right here. My understanding is it should be something different. It seems like it should be the unique ID, but again, this is something that was captured within a JIRA ticket so our team can take a look at it. But you can see for right now it's pointing to the job ID. We have our image field. In this case this one was authored by someone and you can see there are instances where you don't have an image and there are instances. You do if you do have an image and it will display here to the left. We have our job title, so casino host. I'm gonna actually find casino host on here. Here we go. Casino host. The job portal URL is the destination link when you click on the on actual. Results the updated date. We take this and we post the duration of time since it has been since the job was available. So in this case this is about a month ago. We have our job category casino sales also listed here. On the results, job type full time. This is not something that's listed on the result, but it is something that affects the filters. Job types full time. Then we have the address and we showed how the address does dictate the folder structure that's in the DAM. And then we have here the job properties, Seminole Hard Rock Hotel and Casino Tampa. And here's an example of how the job property is displayed here within the results. Those fields are also going to affect the filters as we saw before job category. It is in this section. Select properties. These are all the ones where results are existing. Select locations. This here is a combined field based again off of the. In this case this is the country. So in this case this is Canada, but here we you know US the job location, state and then also the city. So that this is a concatenation of those 3 fields. I'm going to pause here and see if there's any questions. On how the content fragment fields map to the job search component.

Mayte Eme 25:54 Notice.

Lisa Cardia 25:55 Just me again. Oh, sorry, my turn. If you want to go, it doesn't matter. You can go ahead. OK. I was just gonna say to reiterate all of the the fields that you just mentioned if we were to override if needed.

Mayte Eme 25:58 Yeah. Go, Google.

Lisa Cardia 26:10 They'll get overridden when the sync happens again. Just to be clear, it was what 3 fields don't get overridden. I guess the the point is like, I don't know if we should touch these if it's gonna resync every what, 30 minutes? Like does that?

Daniela Tea 26:13 Yes. The fields that.

Don Middlebrook 26:21 G.

Daniela Tea 26:22 The only so the fields that an author can touch and would not get overwritten by sync is this image field and then also the is hot job and that's sorry, just realized this is one thing. So these three of course have the is hot job toggle set and that would be something that comes from an author.

Lisa Cardia 26:43 Yes. So it was just, it was just Image Field and hot job.

Daniela Tea 26:49 Yes, that's correct.

Lisa Cardia 26:51 You said three, so I just want to make sure if I.

Daniela Tea 26:53 So LD JSON also that's that's not something that's going to be displayed here, but just want to be clear, this is something that is included. I believe in the other content fragment models again not coming in. This field is not going to have any information coming in from Work Day. It is something that an author could author if needed, so this would not get overrated. Neither.

Ramona Harris 27:16 Daniella, are the select locations under the job search component? Are those locations pulling in from AEM?

Lisa Cardia 27:17 Got it. Thank you.

Don Middlebrook 27:19 Sh.

Daniela Tea 27:22 Yes. You're talking about this portion? Yes, yes. So this here is coming in from. It's a combination of the country field, the state field, you can see FL and then the city field. Let me find Tampa. Here we go. So.

Ramona Harris 27:29 Yes. And that was pulling in from OK. OK. I was just asking because I didn't see Ottawa on the back end of AEM and I was.

Daniela Tea 27:46 US I fell in Tampa.

Ramona Harris 27:54 That just brought to my attention because I was thinking if there's a new property, is the author responsible for adding that property and then that property will pull into this area here under select locations as well?

Daniela Tea 28:07 So when new properties are created, so let's say in work day, I guess a new property is created and a new job is created for that property. That folder structure should be because this because these content fragments.

Ramona Harris 28:10 OK.

Daniela Tea 28:23 Are being populated from Workday. What's happening is the folder structure is set up based off of those fields as well. So an author would not have to create this, nor would an author have to update anything in this section because this is all coming in from the fields that are within the content fragment.

Ramona Harris 28:42 OK. OK. Thank you.

Daniela Tea 28:43 Yeah, and I see Don's hand up, I think.

Don Middlebrook 28:47 Yeah, so for the image component, you may have already said this, but so where exactly is that image coming from? Is it coming from workday? How is it authored?

Daniela Tea 28:50 Mhm. Oh, so yeah, so this particular image.

Don Middlebrook 29:01 It's uh, it's it is in the dam, so.

Daniela Tea 29:04 Yeah, this is this is coming in from the dam, so this so I don't want to X out of it just because it's in stage. But yeah, if I click on add asset I would be able to select any other image from the dam instead.

Don Middlebrook 29:08 Sure. Right. So if this asset's already there and we haven't changed it and let's say I move the asset, is it going, we're going to lose that reference?

Daniela Tea 29:26 The reference should update, but I am going to take that down as well. Don, just to confirm and I can report back tomorrow, but it should update the reference if this gets moved. If it gets deleted then this would break, but if it were to get moved then yeah it's it moved or renamed.

Don Middlebrook 29:29 OK. Sure. Yeah. Yeah. Right, right. No, definitely, yeah.

Daniela Tea 29:45 Then the references should be updated as well.

Don Middlebrook 29:47 Should say, OK, I just wanna make sure. I mean, I I knew that was the case, but I just wanna make sure that that's where it's coming from exactly so.

Daniela Tea 29:53 Yeah, absolutely.

Don Middlebrook 29:55 Thank you.

Daniela Tea 29:56 Sure. Okay.

Charles Baugh (SHRSS)** 29:56 I had a question. My hand raising isn't working for some reason. I keep trying to raise my hand and and it won't do it. I had a question about the sequence. So I'm assuming the sequence is all by I guess by the date value, right? Is that the way that it's arranged? Like so when you look at the page you see that there's a sequential order, right? You have 13 days ago, a month, month, whatever.

Daniela Tea 30:00 Oh, no problem, Charles. Go ahead. Sequence. Yes.

Charles Baugh (SHRSS)** 30:16 Is it? How is that sequence determined? And if you wanted to reorder something, how would you do that?

Daniela Tea 30:22 So we have there is a filter that's associated with this component. Right now I'm viewing this in essentially published mode, but I will now go back over to the editor and we can configure this component to see what was set. So I'm just going to open this up. You'll see here on the sort filter we have most recent job title and location. These values are coming in these. These are not something that an author touched. These are something that will already be part of the job search configuration. If additional sorting is available in the future then that. Is certainly something that could be added by an author by simply clicking add, but these were the ones that we were informed about so they are added here by default. So in this case here most recent is what was the default was selected and so that's why it's being displayed like that. However as a user if I want to do job title. It's going to sort everything outside of the hot jobs O location. Oh, OK, so it does. Sorry. When I say it sorts everything outside of the hot jobs, what I mean is the hot jobs will should always stay at the top. However, these will sort amongst itself. It's separate from from the portion underneath. I want to make sure that's clear.

Charles Baugh (SHRSS)** 31:42 OK. And then after that I'm assuming it's by property and then the most recent in that property.

Daniela Tea 31:48 After that, so you're saying most recent if we were to do sorry, like you mean like if we did job title or?

Charles Baugh (SHRSS)** 31:54 Right. Yeah. If you so if you just did job title, is that gonna be like in alphabetical order by a job title?

Daniela Tea 32:01 Yes. So based off of this, like assistant general assistantship, I'm trying to see if there's OK, here we go. So like bartender, same, but Hard Rock Cafe Barcelona, Spain has precedence over Edinburgh, United Kingdom. Yep.

Charles Baugh (SHRSS)** 32:13 OK. OK. All right. No problem. OK. Thank you.

Daniela Tea 32:16 Mhm. Yeah, sure. OK. So I think since we're looking at the job search component, let's do that. And what we'll do, just to be clear, when we go over the other components, we can also take a look at how they map to the content fragment. But since we're talking about job search, let's go ahead and look at the configuration for this. And I'm also going to open up another page and we're going to create a new page and then just add this on there to see what it looks like by default. So give me one moment to be able to add that new page. We're just going to create a page using the open page template. And this is knowledge transfer job search. So just putting something random here just to get this to have a link page. OK, all right. So now what I'm going to do is I'm going to add a couple of spacers on here simply because this particular template you would typically use. Say a hero image or so, but I'm not going to put one in here since I'm just trying to test some components. So in order to kind of take up that space, I'm just simply adding some spacers, so I'm just going to add the job search component. Here and we can see I dropped it on the page and this is how it looks. And let's see what the configuration was by just dropping it on the page. Just putting this over to the right here. OK, so. Our job search component is again pulling in all those jobs that are currently in AEM, so author doesn't need to necessarily do anything from that through this configuration window. You can see how it appeared with me just dropping this on there since there's an. Associated query with this component, but what an author can do is we can see here I'm able to edit these specific text fields, for example the title. Refine your search. That's what's being displayed here on the left for the filters. We have different button labels like clear all which is displayed here, the placeholder text search, our category labels, job categories, properties, job types and locations. So this is these are the default values here. We had that sort label that we had taken taken a look at. So sort by I believe is displayed in mobile so we can see that when we look at the mobile view. But our sort filters currently have three options by default with most recent as the default selected. We have our properties label that is select properties and you'll see here singular and plural. So as I'm starting to select things, if I select one, I'll say one property selected. If I say if I select multiple then that's when it would display this version instead. Job types. Locations. So all these labels are associated with the filters here and the apply filters label. There's apply filters button I believe in mobile. So again we'll take a look at that and then again more more labels for when a job is found. Singular and plural. Here we have results per page. Right now you can see it's 50. Since there's 30 jobs, then there's not going to be a pagination. However, if I were to say change this to 10 and I hit done, I'm going to hit preview and I Scroll down, you can see that pagination will begin. Depending on on how many results I want to show. Now keep in mind that as of right now the pagination I have put 10 and so it does show 10

results here. It also will show the hot jobs in addition to those 10 results. So the 10 results is saying OK 10 on here and then also to show the hot jobs. I am going to change this back to 30.

Angelika Akopyan (SHRSS)** 36:31 Do we display the hard jobs on each of the pages or just on the first one?

Daniela Tea 36:31 Save this. I believe, sorry, let me change that back. I believe it only shows it on the first one, but we're gonna, we're gonna look at that right now. So I've set it back to 10 and I hit next. So now it's gonna show 10 on each of these additional pages without the hot jobs at the top.

Angelika Akopyan (SHRSS)** 36:38 OK. Yes.

Daniela Tea 36:56 O The first page is going to be 10 plus hot jobs on top. All right, let me now let's take a look at how things will render when we look at it in. I think iPhone would be the most appropriate here. So we'll see here that we have our refine your search button. Second, yeah. And so when I have refine your search, you'll notice things are a little bit a little bit different. However, it's. This is how the user will be able to interact with it. So let's take a look at the configuration. So Yep, the title again here it's it's a title, but it's also now serving as the link to display the filters. Um, and then all right, one second. OK. See if I were to select things. Yep. So you'll see here this is this is what's the this is what's being pulled in from the plural selected or singular selected. These are all things that were configured by the author. Jobs found, job categories selected. Et cetera. All right. And then here's our apply filters button. Keep in mind I'm viewing this in in the emulator. That's why this is so long. Of course on the phone, if your review is on actual device, apply filters is not going to be, you know, like on this long scroll bar. But this is where the apply filters button comes in and one of the things that we. Had seen that an author would, um, be able to configure. So where is it? So here you go, the apply filters label. Hey. All right. Any questions about what we're seeing here with job search?

Mayte Eme 38:59 Not the search, but the cards. When I click on an actual card, what's that we need to track these clicks, right? So I remember in cycle we used to have. I don't know if we did a custom or we just had something hard coded, but they had unique IDs, right? Not.

Daniela Tea 39:04 Mhm.

Mayte Eme 39:17 And friendly so we can track them. So when I click on them, what data I send to the Tillium data layer?

Daniela Tea 39:24 So in terms of the data alert, that is that is something that we can capture as a question for our tech team. The link that's populating this as we saw is coming in from. Uh, the content fragments. I really pull that up again.

Mayte Eme 39:43 So OK the link I get but the ID of the you know like each course you have their own like name or ID something.

Daniela Tea 39:45 Yeah. Right. You're you're saying like for example this here should be like say like ID one and then another one be like ID2 etcetera, like in unique individual for each of these results. That's what you're asking for, correct?

Mayte Eme 40:00 Yes, mhm.

Daniela Tea 40:02 One second, let me uncheck this just so we can see more. So in terms of these all having unique IDs as as something from like the author standpoint that is not currently set up within the configuration section as you can see here. But I will check in with the tech team with regards to what's actually being passed, because I do believe these should still have unique ID's since they are coming in from unique content fragments, but I will get more information. More information on that one and we can follow up on that during tomorrow's Q&A portion before we start with the next portion. Does that sound good, Maiti? OK, all right. OK. Any. Yeah, go ahead. Sure.

Mayte Eme 40:43 OK, Yep.

Angelika Akopyan (SHRSS)** 40:47 Yeah, I can Daniel, we have one quick question related to the actual job. I understand that the job runs every 30 minutes, but is there any option to run the job on demand if we need to run for whatever reason in between?

Daniela Tea 41:01 Any option to run the job on demand? So I actually I actually want to check in and I'm not sure. I'll check in with our dev team, but my understanding is actually this is running more than 30 minutes. I don't. I think it was running as much as like every 5 minutes or so I I.

Angelika Akopyan (SHRSS)** 41:03 Thank you, ma'am. Anything is.

Daniela Tea 41:21 I will confirm the numbers on that, but your question is would you be able to run it on demand? Since I think it was it was such a short time, I'm not sure if we have that particular functionality because you can see here like it's been less than 30 minutes and this is already updated.

Angelika Akopyan (SHRSS)** 41:21 Oh, OK.

Daniela Tea 41:41 So I I'm not quite clear the exact duration, but I will check in on that and then also ask that question about an on demand update for these jobs.

Angelika Akopyan (SHRSS)** 41:48 I wonder how how long will be the period for the in production also 5 minutes or it will be increased to 30 minutes. I don't know even in staging or in a low environment they just did it 5 minutes so that we can test.

Daniela Tea 41:51 Uh. Mhm. Right. Because there's because there's way less jobs. Yeah, that's that's definitely something. I think we would need to check in on it. Go ahead, Gonzalo, maybe you have some insights on that.

Angelika Akopyan (SHRSS)** 42:04 And. And I wonder how long it takes if we have. Currently we have around 800 jobs in production. How long will it take the whole thing to happen? OK.

Daniela Tea 42:24 Gonzalo, did you? Did you have?

Gonzalo Calasich (SHRSS)** 42:27 No, I will wait. I will wait for you guys to answer Angelica first.

Daniela Tea 42:28 Oh.

Angelika Akopyan (SHRSS)** 42:31 No, I think I'm done. I just asked my questions. You can go ahead, Gonzalo.

Gonzalo Calasich (SHRSS)** 42:36 What your question would answer, Angelica?

Angelika Akopyan (SHRSS)** 42:39 No, I think Danielle will check it out.

Gonzalo Calasich (SHRSS)** 42:41 Oh, OK, cool.

Daniela Tea 42:41 Yes, that's something I'll need to check in on, Gonzalo.

Gonzalo Calasich (SHRSS)** 42:44 OK, so on the on the search page I noticed when you select something on the filter it doesn't really append something on the URL. Is is that something that you guys because the the current one we we have every time that you select a filter it will append the.

Daniela Tea 42:51 Mhm.

Gonzalo Calasich (SHRSS)** 43:04 To the URL. So that that means that if I copy that URL and put it someplace else, it's going to do the filter automatically. Is that something that is going to happen? And the reason has been because I I think you know somewhere on the sites I think they have a hardcoded you know categories or property. Locations that will need to be in the filter automatically, so I haven't seen the the filters being added on the URL on the on the URL.

Daniela Tea 43:31 Right. Yeah, so.

Mayte Eme 43:35 Yes, thank you, Gonzalo. We do need deep links and we need them to be friendly. Not those weird numbers, letters that we have right now.

Daniela Tea 43:44 Yeah. So in terms of what you guys like as we can see like you're you're pointing out Gonzalo not appending to the URL and yes, there are definitely instances I believe. Let me see, let me take a look. There are instances on the the website where you guys are leaking. Yeah, yeah, sorry.

Mayte Eme 44:02 So just to give you an example, we have exactly properties will go to their specific property or we will go by category or we might go by region, right? If it's like depend depending on the use case.

Daniela Tea 44:11 OK, yeah. So yeah, let's take a look like, I guess like if we were going to Hard Rock Digital, uh, if you all.

Mayte Eme 44:22 No, they have their own hiring. We usually don't. Don't LinkedIn, yeah.

Daniela Tea 44:25 Oh, do they? Oh, 'cause I I think, right? I think you're.

Angelika Akopyan (SHRSS)** 44:29 My pictures if you go to my cages.

Mayte Eme 44:30 They have they they feed into work day, but they have their own thing too, so that's not a good use case.

Daniela Tea 44:34 I see. OK. Um, what would be a good one then?

Mayte Eme 44:39 A property. I mean if you go to a property website, they link to right now to the career site and you learn on that specific property like Brighton will link to this research results page filtered by Brighton or it could be filtered by Brighton and a category or and you know.

Daniela Tea 44:53 So I do.

Mayte Eme 44:59 I don't know whatever we want to do, we can mix and match any of those filters.

Daniela Tea 45:04 I see something. Yeah so this is because I know that even without even throughout this site there are instances where the URL is going to have like something like this with some parameters at the end. In this case here like I I copy this from whatever link we were just on in this case here this.

45:11 I.

Daniela Tea 45:26 Does not exist with the QA data, so that's why it's not able to show something doesn't exist. I know it says 30 jobs found because the default behavior is that if it's not going to show anything instead of saying 0, it's just going to load the jobs as is.

Mayte Eme 45:39 Right.

Daniela Tea 45:43 So this is definitely something I, you know, I I want to talk to the tech team on because we were working with such a small subset of data. But yeah, definitely want to confirm how the filtering works with regards to the URL because as it stands right now, I'm just going to go to the search for.

Mayte Eme 45:53 Oh.

Daniela Tea 46:02 Jobs page, right? As you're clicking on filters, it's not going to append that to the URL, but it sounds like that's what you guys need.

Mayte Eme 46:07 Well, to be to be honest, we don't want the filters to append to the URL, we just want a deep link. So because every time you append to the URL, you literally create a new URL. So our analytics now has 1000 URLs for the same page.

Daniela Tea 46:15 OK. Mhm.

Mayte Eme 46:24 Just because of the filter options. So we don't want it to append to the URL, we just want to have the ability to deep link so we can add to the URL and land on the page filtered. We don't want users to be, you know, clicking everywhere and changing the URL.

Daniela Tea 46:37 OK, OK. So let me talk to the tech team on that one too, because I know that was we were we were testing in in terms of authoring certain pages and we saw that the URL on the live site had those filters appended to it. So let me make sure and confirm how that's going to work with the use case that you described might say for those other property websites. So we're going to take that one back and we'll get back to you guys hopefully tomorrow on that one, OK. Now I'm going to, I'm going to just get out of this, this particular page so that way I can focus on the editor. Yeah, go ahead.

Mayte Eme 47:16 One last question about this, just because you never know right with our technology, if for whatever reason the sync goes wrong and it's not connecting or whatever, do we have an error message?

Daniela Tea 47:29 Do we have an error message if the sync goes wrong? So if the I think if the sync goes wrong, if there's existing jobs in there, that would still display because that's already in AEM, right? So like it.

Mayte Eme 47:40 OK. So if you display the last sync, it doesn't OK and if for whatever reason you can't display the data.

Daniela Tea 47:45 Yes, that's correct, right.

Mayte Eme 47:52 It's just blank.

Daniela Tea 47:55 I believe this would just we do have a no jobs found message.

Mayte Eme 48:01 OK.

Daniela Tea 48:02 So that this display right now you're gonna see this if I were to delete all the content drivers right now it would say no jobs found. But if I were to like try and do some weird selection of filters, it would say no jobs found. So you're saying if.

Mayte Eme 48:08 Mhm.

Daniela Tea 48:17 There's an instance where it's not waking.

Mayte Eme 48:19 For whatever reason it cannot pick, it cannot read, it cannot display anything. Instead of just showing blank in like we should have like you know like that message, no jobs found. I mean something better than that, but you know like a custom message that we can display.

Daniela Tea 48:38 OK, yeah, so I'm trying to think of when there could be an instance because like I mentioned, these would all still be here. So as long as there's jobs in AEM, something would display in this section. If you if there was no jobs in AEM, it would display no jobs found. So this is custom, but it sounds like what? What you're saying might say is like say another field if there's like an error, not just if there's no jobs found because of weird filters.

Mayte Eme 48:59 Mm.

Gonzalo Calasich (SHRSS)** 49:02 Yes.

Mayte Eme 49:04 Like, yeah, and I remember when we were testing Isense, we had that we we had them break it to see what would happen, right? And we got a blank page. So we just adapted to have a an error message in case that ever happens.

Gonzalo Calasich (SHRSS)** 49:14 Yes. Any. That.

Daniela Tea 49:21 Sorry, someone saying sorry, someone speaking.

Gonzalo Calasich (SHRSS)** 49:25 Anyways.

Mayte Eme 49:25 I think that was background.

Daniela Tea 49:26 Oh, OK, got it. All right, so yup, heard what you said in terms of essentially something separate from no jobs found, more like a specific error message for when something can't load instead. That certainly sounds like something that we'd want to cover during the gap analysis, so.

Mayte Eme 49:28 OK.

Daniela Tea 49:46 We'll make sure that that's something that we're taking note of. I'm going to hit cancel.

Mayte Eme 49:51 Yeah. To be fair, I don't know when that would happen. I mean, the odds are low, just, you know, having some business continuity in case something goes wrong.

Daniela Tea 49:58 Yeah, yeah. No, understood. All right. OK. So I think we we talked about with regards to the job search component, essentially, you know some of the things that you can see the differences in mobile. And in desktop, the configuration and how the fields are mapping. Are there any questions with the job search component before we move on to our next component?

Lisa Cardia 50:27 Um, just from me, I know we're going uh component by component today, but as it relates to like a new page needed for careers, what template should we be using? And is that on our? Forgive me if it was on the agenda to go over just building a regular page for.

Daniela Tea 50:31 Mhm.

Lisa Cardia 50:42 For careers, so we know which template to use.

Daniela Tea 50:45 Yeah, so Lisa, for all of these pages you're gonna be using essentially the open page template and it's just like how I did here. So it's always gonna have like the the header and the footer established and then the middle area for the content with whatever components you need to add to it.

Lisa Cardia 50:58 OK. But that was always open page.

Daniela Tea 51:05 Yes, that's correct. Yes. Yep.

Lisa Cardia 51:06 OK. Thank you.

Mayte Eme 51:08 I do have one more question about filters because I know we did that wrong and we had to fix it during the Sprint when we did items. When you select the filters, do they update each other? Angelica, I don't know what word we use if you remember, but if I select like you're doing now properties, types and locations get.

Daniela Tea 51:25 Uh huh.

Mayte Eme 51:27 Ulated so you only see.

Daniela Tea 51:29 Yeah, so you can see actually how like I had selected multiple here, but then when I selected a property, it kind of removed those filters. I don't know, conditional filter. I'm not quite sure what the correct term is, but you can see how like when I unchecked properties, the categories came back, right? Is that what you're referring to?

Mayte Eme 51:42 Uh. Yep. Yeah, I I see it. Thank you. Exactly. Thank you.

Daniela Tea 51:49 My day. Okay. Yep. Sure thing. All right. OK, guys, let me Scroll down now and let's take a look at

our next component. OK, so this is our job listings component and I'm going to pull back up. Uh, my. Sorry, my my random job posting here the CF again so we can see how this maps to the content fragment. Let me close out of my test one and I'm just going to jump back to author. OK, here we go. So this is the job listings component. So the job listings component actually can display in two ways. In this instance, I'm showing all the jobs, limiting it to a certain number of jobs I want to show, but I'm showing everything versus showing just the hot jobs. But let's take a look first at this job listings all and just really quickly here. We're going to see again this card is comprised of our image that's set here or with the image configuration page, which again I will be showing. We see the title of the job and then also the property. Listed here and then we have the Apply Now button which is pulling in this particular link. OK, so let's take a look at how this is configured to be showed the way it is right now. As mentioned, I can select between all jobs and hot jobs. In this instance I have shown all jobs for the layout style. I chose 3 columns. You have an option of 123 or four. My route path is pointing to a specific folder in the dam. In this case I had selected, I went to SHRSS CF jobs US and I selected Florida. So that way it will pull in all of these particular folders from Florida and display within this component. If I wanted to say narrow it down to just Tampa, I could do that and. It would just show the items here, but in this case I chose everything from Florida. I can also select my maximum job cards. So say I only want to show like 3 jobs in Florida. I'm not sure you know there might be a use case that you have like you only want to show a certain number. You can do that by setting this here. So if I were to change this to say 4, I'm going to hit done. You can see it changed. Yeah, go ahead.

Mayte Eme 54:29 Does it only does it only go like Florida as a state or does can you can select properties because what we our real use case would be South Florida Cocoa Classic. Oh OK, you can check.

Daniela Tea 54:37 Yeah, so if I were to select Orlando instead and I do this, you can see this is only showing things from Orlando, so.

Mayte Eme 54:45 And you can do multiple properties, right? I saw checkboxes.

Daniela Tea 54:47 So in this case you you would show um one. Uh, you can do multiple properties.

Mayte Eme 54:54 Because we would do the three, the what is it? They have a name for the three in Florida, the three big S or whatever they call it. And it's Coco, Classic and Hollywood. We we do job first for those 3.

Daniela Tea 55:06 Classic and hot. So you're saying like like in your instance, you would probably show these two together. Is that what you're saying, Maiti?

Mayte Eme 55:18 Yeah, I see that you can select more than once, I think so.

Daniela Tea 55:20 Oh no, no. So you cannot select more than one. Be clear, you can only select one time. However, in this instance, like if you, this is not going to be the most elegant solution. However, if I want to show those.

Mayte Eme 55:23 Oh. You just remove the headings and put them one after the other.

Daniela Tea 55:38 Yes, correct. Yeah.

Mayte Eme 55:40 Yeah, but then you can't sort them properly.

Daniela Tea 55:45 When you say sort, I guess what kind of sorting are you talking about?

Mayte Eme 55:47 Yeah. Well, if you want to sort them by, you know, by category or division or whatever, you can't, it's property, then the division. OK, so we'll just know this is another gap.

Daniela Tea 56:02 Select.

Lisa Cardia 56:03 I think I do have a question on this too though. What are the steps that you chose? So you can also choose the columns, but you said you can choose like the Max cards. Is there any way? And this this occurs quite a bit on like very similar components outside of careers.

Daniela Tea 56:05 Sure. Mhm. Uh.

Lisa Cardia 56:19 If we had less, like we always have three being the typical 11 row, but if there is less than three, there's no way to like center the two cards or center that one card so that like so they're not always left aligned I guess is my question.

Daniela Tea 56:26 Mhm. And. I see what you're saying. Um.

Lisa Cardia 56:37 So like that fourth card that you just had when you did 4 listings was like all the way to the left, but the rest were center. So it's.

Daniela Tea 56:40 Yeah. So.

Lisa Cardia 56:45 Is there a way to keep it that way?

Daniela Tea 56:45 Yeah, so let's see. So not currently. So in this case here I I understand what you're asking. You would want these to be centered, but let me confirm something though. You would want this to be centered without changing the width of the cards, is that correct?

Lisa Cardia 56:54 Yeah. I'll have I'll defer to the UX team to to comment on the width of the cards. I would think we'd want them to to not get larger because then that might distort what they look like, but at least centered.

Daniela Tea 57:15 Yeah, so that. So that's currently not there, but I was asking because that would certainly be something that we would discuss during the gap portion, but something like understanding if this number were to change, like for example if this was one, oops.

Lisa Cardia 57:30 Yeah, 'cause it's one, it's one in the section below. So that's why I was like saying it looks a little bit odd when or when you just had you just had Coconut Creek or something selected at this point and it was showing just one. Yeah, so so one by itself especially looking.

Daniela Tea 57:31 This is 1. Uh huh. Oh, when I had two, two together too. Yeah. Mm-hmm.

Lisa Cardia 57:48 You know.

Daniela Tea 57:49 Yeah, no, understand what you're saying. And yes, so this sounds like a gap. However, when we discuss the gap, that would be something, you know, like we would need to understand if there's less numbers, what happens to the card? Does it stay the same width? Would it increase? It would be centered and it would increase, you know, like if I were to put two here is the. Expectation that this would take up 100% of this width right here or that this would just simply be centered. So those are the kinds of things that we would need to to discuss during the gap portion. But certainly understanding though that is that the desire is that at least at the bare minimum the alignment is something that is missing from this component.

Lisa Cardia 58:16 Right. Yeah, I guess the reason why I bring it up, especially not just to be like nitpicky, but because of the hot jobs in the hiring events that we saw on the home page, those ones centered, the hot jobs actually got bigger, but it stayed center aligned. You know, they're all working differently. So it's like although we're we're having a set of.

Daniela Tea 58:37 Hey. Yeah.

Lisa Cardia 58:46 Grid cards, they all display different, so it just doesn't look very like neat and consistent. That's my concern.

Daniela Tea 58:54 OK. OK. Yeah, these are all definitely, these are definitely the topics that we want to talk about when we go over the gaps for the job listings though. So in this case here I had chosen Orlando, I had chosen previously I had chosen Florida.

Lisa Cardia 59:00 Yeah.

Daniela Tea 59:11 Simply because I knew I had more cards. Just do this. So yeah, so you can see here it's going to list out everything within my columns of three because that's what I selected. The button label apply now that's just, you know, dictates what's being displayed here, but

again, as mentioned before.

Lisa Cardia 59:22 Yeah.

Daniela Tea 59:31 The URL, the destination URL for this is coming from the individual content fragment. So this is going to link to that specific page for Hostess is going to the general manager, etcetera, etcetera. And here you can see a job's default image. So if say you did not put any image within the content fragment here, you're able to set something so that way when it's displayed as cards here, it will at very bare minimum have this this image that's listed in the card. So if I were to of course clear this, it done. And you can see it's not going to show anything, so I'm able to to set whatever default image I want for this particular component. That apostiary, yeah.

Lisa Cardia 1:00:18 And that doesn't work. That doesn't work the same for the listings we saw with the search, because like the ones that appeared with nothing didn't have.

Daniela Tea 1:00:26 Right, so this the search and that's where we're going to take a look at the configuration page, but there is no default image set up within the job search at this time. Let me open this. Let's confirm. So we talked about jobs type when it's all jobs. We talked about the layout style, the root path, and how you can only select one, but it can be very specific for property. It could go up to any portion of this hierarchy setting setting the. The maximum number of jobs, our CTA button label, and what populates the link opening a new tab, as well as our default image here. OK, so this is for yeah.

Lisa Cardia 1:01:12 Sorry Danielle, the the apply now link. So is there a a purpose for it then? If that always gets added as the content fragment, like why do we what would we? What would happen if we put different text there? What is that gonna do?

Daniela Tea 1:01:15 Yes. Oh, well. So this is what dictates the button text.

Lisa Cardia 1:01:29 OK, so that always has to be filled out and can only be the the same there, but then the actual URL is what gets generated in the fragment.

Daniela Tea 1:01:39 Yes, that is correct.

Lisa Cardia 1:01:40 OK.

Daniela Tea 1:01:41 Yeah. All right, OK, so that is for all listings. Let's take a look at the exact same component, but in this case, this is specifically for hot jobs. OK, so you can see here same. I put Florida and I selected three column and I selected yeah.

Lucas Nelson 1:02:00 Daniela, sorry, this you wanted to leave that different text.

Daniela Tea 1:02:05 That's fine. Yeah, this is. Oh, just to be clear guys. So this isn't stage, but it is. It is a test page, so so don't worry and we will certainly be removing it. So it would not appear on production. Yeah, no, no problem.

Lucas Nelson 1:02:05 I don't know if the test page for you. OK, thanks. OK. All right. Thanks. Sorry.

Mayte Eme 1:02:20 I have to select a location. Sir, can we have the path as the road? Because hot jobs would be every hot job, not specific to our location.

Daniela Tea 1:02:20 So here, yeah. So you're asking for hot, like, say, say you selected multiple hot jobs for anywhere, right? So you would just move up the location of where you wanted that to be. Yeah, in this case, I chose. I chose Florida just because that's where I knew the hot jobs were. But yes, you could set it higher up in order to choose those hot jobs.

Mayte Eme 1:02:39 Good job. OK, so that works. OK. And if there are no hot jobs, like let's say you leave it like this, right? And we have a bunch, but at one point we don't have anything. Does it just hide by itself or blank with a message?

Daniela Tea 1:03:04 So right now I believe it would be blank, but there is no message at the time. I think we saw that again because we were using QA data. And just to confirm, I take you're saying there are instances where you guys will not have hot jobs or will there always be at least one I guess from y'all's end?

Mayte Eme 1:03:24 We don't have hot jobs as often as you may think, so we don't want like hot jobs title and then blank. Nothing, you know, it's.

Daniela Tea 1:03:28 OK.

Angelika Akopyan (SHRSS)** 1:03:31 Yeah, my TV tested this and if there are no hard jobs, then what will happen? The section is still there and you'll have the section name, but the the whole section will be empty.

Daniela Tea 1:03:31 OK.

Mayte Eme 1:03:45 What do you mean the whole section? Something like the title like everything and it's just a.

Angelika Akopyan (SHRSS)** 1:03:47 The time you will have you have the the the hot jobs title as a section title right? But there will not be cards underneath.

Daniela Tea 1:03:53 Yeah, so this here. Right. So like pretend this type. So this title is there's.

Mayte Eme 1:03:59 So there's no message saying no jobs or nothing.

Daniela Tea 1:04:02 There would not. There's currently not, um, a message that displays if there's no hot jobs.

Mayte Eme 1:04:09 Or the component or the module hides. OK, so that's.

Angelika Akopyan (SHRSS)** 1:04:12 No, it doesn't hide. It doesn't hide. It will stay there. It is a title, but blank, blank.

Mayte Eme 1:04:16 OK. OK, it's just another up.

Lisa Cardia 1:04:22 Yeah, so if you went to production today, team, you would see that we you might have scraped the site and a hot job existed, but hot jobs no longer has any listings currently. So the title of hot job section comes down automatically when there's no listings.

Daniela Tea 1:04:36 Mm. Hmm. OK. OK, alright. OK.

Mayte Eme 1:04:45 Do we have a back for that, Angelica?

Angelika Akopyan (SHRSS)** 1:04:46 We have a. Yes, I have a for this. Mm-hmm.

Daniela Tea 1:04:47 Yeah.

Mayte Eme 1:04:48 OK, good.

Daniela Tea 1:04:49 Yes, there is a jury ticket for that. Yep. OK, alright, so that is the job listings component. We covered how that would be set up for hot jobs or if we needed to show all jobs. Let's take a look now at our.

Lisa Cardia 1:05:04 And I think, I think Danielle will, unless you want me to add it to the confluence page. The take away there though is the fact that for the hot jobs we usually put an image of the property, but we wouldn't want to override the logo image in the listings. So although we're going to pull in the hot jobs here, Tampa should show the Tampa property.

Daniela Tea 1:05:05 Yep. Mhm.

Lisa Cardia 1:05:23 Coco should show the Coconut Creek exterior image, but then if we were to look at the same job as the hot job listing at the top, it would still show the logo.

Daniela Tea 1:05:24 Mhm. Uh huh. I see. OK. So yeah, that I think so we are, since we are recording this and that's what we're going to be reviewing essentially things that we acknowledged as a gap, I think Lisa. So I think we have it covered since I'll be checking out the transcription, but let me make sure I I confirm this. You are saying that there are instances where if something is a hot job, you might have a different logo than when it's within the actual job listing itself. Is that correct?

Lisa Cardia 1:06:01 Yeah, it won't be a logo, but rather we like to use like an image of the property. But then when it's in this like search component, that's when we're pulling in a logo.

Daniela Tea 1:06:06 OK. The logo. OK, OK, got it. OK, understood. All right, let's see. OK, so now we're going to take a look at job filters after that job category, category cards, and then the job image page. So let's take a look at job filters. All right, and actually I'm going to pull U. Sorry, I meant to do this for the other component. I know that this is my this is my test. My new test page I had created with the job search component. I'm going to delete that and I'm just going to put in. I realize I didn't show this. I'm gonna go play in job listing so you guys can see what it looks like by default. So I just put it in, put in a new component. So by default it's showing hot jobs for column. It has this root path, so these are the default values and then of course as you can. Figure it. You can change it to however you need. If you want it to show all jobs instead, that's where you would do it here. Change that route path to show exactly where you want versus the overall jobs, etcetera, etcetera. So just want to make sure that the team was aware of what values are here by default. And also how things can look after you configure it.

Lisa Cardia 1:07:36 So that one was set to 8 and four or what was this set to the one that we're just looking at?

Daniela Tea 1:07:37 OK. Yeah, sorry, this one was set to by default it's four column hot jobs, 4 column pointing to the root path of jobs, meaning every every location and then a maximum of eight.

Lisa Cardia 1:07:55 Yeah, if you just had done, I'm just curious, like I would like to know as an author what? So like if it's four, they have like a bit of a skinnier view. If it's three, they have more of the like wider view. If it's two, are they going to get very wide? Like is is the number of columns, what's shading the size of the card? Because it's not like would go in.

Daniela Tea 1:08:18 OK, so I'm going to change this one to two because I'm showing more things here. So you can take a look. You can see that the cards does get wider to fill in the width of this component.

Lisa Cardia 1:08:23 Thank you. OK.

Daniela Tea 1:08:31 Yeah, so we saw how it looked like at 2:00 and then this is how it looks like at three. Sorry, it shifted, but this is how it looks like at 3:00.

Lisa Cardia 1:08:41 Got it. So it's the columns that's dictating the size of the cards. Number of cards are always going to left align no matter how many.

Daniela Tea 1:08:41 Yep. Yes. That is correct, yes. All right. OK, so now let's go on to our job filters component so we can see how I configured this and we'll see how it looks like upon initial configuration. All right, so just join to the left. This is the filters that you see on the homepage of the careers website. Here as an author, I'm configuring what I want the search jobs button to go to. In this case, you can

see I've sent it to our jobs page. I have the labels that are displayed here, job categories, select properties, select job types, select locations, as well as the singular and plural labels like we had seen earlier. So that's that's for all four of these drop downs. We're just going to Scroll down. A little bit more. We have our button text of search jobs and then of course when you view this particular component in mobile, there is a title that gets displayed on top of this that the author would be able to configure here. Let's take a look at how that is. Find it. Here you go. So find your career is the title that I figure within the component, only displayable in mobile. OK, so this is the job filter. So let's take a look at how it is when you just drag it on the page and remove my job listings component. Job filters. So by default it looks pretty much the same, but the search page is something that you would need to configure. You can see right now it's pointing to just like a random location with an SHRSS because your search page could be anywhere. So this is certainly something that an author would need. To make sure it's configured properly. In terms of the labels, you will likely keep the majority of this information the same, but perhaps the button text instead of search jobs, you might need to put something else, but just wanted to make sure that the authors. Confirm that the job search page is indeed pointing to the correct search page that you need it whenever you use this component. Great. OK.

Mayte Eme 1:11:18 Why do we have to configure the search page? We only have one search page.

Daniela Tea 1:11:23 So when this the way that this is working right now is the on on the current website right now in stage it is pointing to the right search page. So an author at this moment would not have to change anything if you were to ever have to use this component say I don't. I'm not quite clear why you would use it on say like a cafe site or something, but if you need to use it somewhere else, that search page is going. The job search page is not going to necessarily be in the same location for every site I would imagine. So what we're just saying here is that. You don't have to change anything right now as it is because it's been migrated, but if say you have another search page you need to point to instead when you're using this component, you have the ability to change that as an author.

Mayte Eme 1:12:03 Mhm. But even if we put this widget somewhere else, we would go to the same search page. Can that be defaulted?

Daniela Tea 1:12:22 It certainly can, but keep in mind whenever you default values, I guess the question is like having the flexibility for an author to be able to change things. If we're talking about like a default value, sure, that's fine. However, if you were to change the structure, you know, I guess, or if there's another search page, you want to just.

Mayte Eme 1:12:26 Uh.

Daniela Tea 1:12:41 Make sure that the author has that flexibility to be able to update it.

Mayte Eme 1:12:45 Yeah, I I mean, I do like the flexibility and that that that's good.

I'm just saying if we're gonna use it somewhere else, we pretty much. 99.9999% of the time we'll go to the same search page, so defaulting the value is just one step less. That is a content author that I will have to do, you know, the easiest for them, the faster and the better for all of us.

Daniela Tea 1:13:08 So I I think, yeah, so it sounds like then for right now things should be fine. There's the default value as we saw is something that is a little bit different since you know if you is a little different if you ever use it. Just as it is. However, if we were to take a look again at what is currently going to be, I think it's on, it should be on home. Yeah, so this should be set up as is. And I guess my say if if like there's no reason to use this component anywhere else for the time being, this should be fine the way it is then. This is what's currently on your stage website configured properly.

Mayte Eme 1:13:48 OK, we'll just log it and I guess identify, you know, another gap and we'll fix it later.

Daniela Tea 1:13:54 Great. OK, now I wanted to move on. Oh, sorry. Actually, before we move on, quick look at the UI portion of the. So I'm just trying to find my published view of the page. OK, yeah, so this is. My test page, but on the state website. So just just to be clear here again, we can see how this operates. This is pulling in that information from those content fragments. So like the location we saw, that's the city essentially from the content fragment, the category, the values there are being rolled up into these drop downs here. I. Alright. OK, so now let's move on to job category cards and this here is what is also on the homepage, I believe on the current live site. Let's take a look at what I have configured. All right, singular results label, one job, plural results label, 9 jobs. Number of cards to display. I put six sort results. It could either be by the number of jobs, highest to lowest or alphabetical order. In this case I chose alphabetical order. And to your point, Mayte, the job search page, this is again, I know you you're saying there will only be one. In this case here, it's being pointed to that one job search page within the corporate careers website. And so that's what we have here. Let's take a look at how this component is when you configure it from scratch. So I'm going to jump on over to my other test page. Just remove this. I'm going to add job category cards. Alright, so by default you'll see it's pulling in the information on. These are the this information's coming in from our content fragments, right? These are our categories, so it's pulling all that in. You'll notice here it says undefined, undefined, undefined, and that's because I don't have how many cars I want to display and I also do not

have the search page added. So if I were to just put a number in this case. I think. Just going to put 9 and then the job search page is under corporate careers, English and then jobs. I hit select once I hit done. You can see here how now it displays the correct label and it's also sorted. I believe I've had it sorted by default by number of jobs, highest to lowest. So this is what it is when you drag the components for the first time to a page. So again, if you want to change that to output order. That would just be something the author configures.

Mayte Eme 1:17:02 How do you change the categories? Because we don't. Um. I wanna say and Angelica, please correct me if I'm wrong, but we can change the categories that we want I think.

Daniela Tea 1:17:18 So I guess my take, can you sorry, can you elaborate on?

Mayte Eme 1:17:21 Does it have the ability? Like what if I don't want to put food and beverage right? I want to promote some other category. How do I change that?

Daniela Tea 1:17:29 What if you don't want to promote food and beverage you want? So you're just say you want to like pick and choose which categories versus everything that's within that's currently stored in in EEM. That's what you're asking. Is that correct? OK.

Mayte Eme 1:17:36 Yeah. Mhm.

Daniela Tea 1:17:46 So I guess if you wanted to simply pick and choose right now with this component as is, you do not have that ability if say you wanted to show like the top three that had the most jobs. You could do that with the current implementation. Right now I'm only showing these are the ones that have the most jobs available. But if you say wanted to show, I'm going to go back to 9 so I can see more if you want to show like casino sales and housekeeping. And just those two currently with the implementation of the component, you would not be able to do that. I guess, um, is that something currently that you all are doing today with the live site?

Mayte Eme 1:18:32 I wanna say we have the ability because we started having gaming jobs and then we added more and we tweaked them. But honestly, this component I would have not developed because we're gonna kill it so we can.

Daniela Tea 1:18:40 Mm. OK.

Mayte Eme 1:18:48 Um. We can just move on.

Daniela Tea 1:18:52 OK, sure. All right. OK. Any other questions, um, for anyone else on the job category cards? OK, so now let's take a look at the promised configuration page. So what I'm going to do now is I'm just going to go back to just the admin view of AEM and I'm going to click on Adobe Experience Manager. And I'm going to click on the hammer here and then I'm going to click on ACS AEM Commons and I am going to click on content packagers. So what this is going to do is this is going to take me to this configuration section where we are able to. To put images for specific properties, I'm going to select the image config. I'm going to hit edit. Alright, so you see here we have this component called Job Images and it looks like it's just a title. However, when we click on the configuration icon, you'll see here what's actually being stored in this component is the job property as well as. The image that we wanted for the specific property. You can see that this dropdown, yeah.

Mayte Eme 1:20:17 What is? What is the job property? Is that the? Because it doesn't read. Is it like specific name that we?

Daniela Tea 1:20:26 This is what's. So let me navigate back to a content fragment so we can see where that's coming in one second.

Mayte Eme 1:20:28 Yeah. Thank you.

Daniela Tea 1:20:35 Yep, alright.

Mayte Eme 1:20:36 Is it like the work they name or something?

Daniela Tea 1:20:39 Yeah, So what I believe what our our tech team did is took the job like this is that field, that value that's stored here in job property, right. So the way this configuration works is it's going to check like for example Hard Rock Cafe Orlando.

Mayte Eme 1:20:48 Mhm.

Daniela Tea 1:20:55 Any jobs, new jobs that get added with Hard Rock Cafe Orlando will then have this particular image stored as the image for that particular job. So this here this value, if it matches what's stored here in the job property, then the image that's that you can see referenced here will will be stored here in this image section.

Mayte Eme 1:21:28 And let me assume all of the locations have been created and already.

Daniela Tea 1:21:28 OK, so. Yeah, so yeah, you can, excuse me, you can see this is a pretty long list and you um.

Mayte Eme 1:21:37 It doesn't seem long. That's what is scaring me because we have way more locations than that, no.

Daniela Tea 1:21:40 Oh, it's it doesn't seem as long as you think. Yes, so this is something that.

Lisa Cardia 1:21:44 I think the concern too is that like Seminole Casino Coconut Creek is in this list with a logo referenced, but that was one of the ones that showed up without a logo.

Daniela Tea 1:21:53 Yeah, so let me explain that. So with regards to this configuration page, anything that has been like any job that has been added before the configuration page was set up does not automatically inherit. This. The reason why is because when we were first working on these components, to be clear, we were told that there are instances where jobs do not have images. There are also instances where again, the author would want to overwrite the image. So because of that, this does not automatically get added to make sure that it's not overwriting whatever an author actually wants. However, if you were to, once we move over to production, all those jobs that will be in production once we have the production connection. It will check the property match here, the value here with this and any of those jobs should then display whatever image is being referenced here. So I understand right now in stage because keep in mind when we were working on some of like the configuration page for example, some jobs are already coming in because. I think was made before we handed off the site, and so that's why you're probably seeing some jobs that do not have any images. However, when we move to production, those images, as long as the job properties match, those images should appear within those content fragments and displayed and say like the job search results component. Night.

Mayte Eme 1:23:33 So who's doing all that mapping and who's getting every name for every location out there when we go by?

Daniela Tea 1:23:39 So this yeah. So this is at least the initial setup of this. This is something that that I know our technical team handled. I'm not clear I guess from the SHRSS side who would be handling adding additional properties for example like if if something else gets added or if a. Logo needs to change.

Mayte Eme 1:23:57 I mean new locations I understand but existing right where we we already have that in cycles so who we need that and what I'm concerned is if were they. Where to change their internal name? Because I don't know why they have HRC Washington DC. It should be Hard Rock Cafe Washington DC. Is that going to break this because the name is not going to map anymore on the next sync?

Daniela Tea 1:24:22 So then what would happen if the property doesn't match this? Like so you're saying if in Work Day for example, if they were to change this to Hard Rock Cafe, Washington DC, what would need to happen is a new entry would need to be added with that specific property value and with

the desired logo.

Mayte Eme 1:24:32 Mhm. A new entry or just updating this one?

Daniela Tea 1:24:44 So I guess, I guess if the jobs that are existing or saying that those jobs should also, I guess there would be no references of this anymore. Is that what you're?

Mayte Eme 1:24:53 Oh, you're saying if all jobs have their own name, OK. Yeah, this mapping is concerning. It seems very, very manual. And it's not even a third or a fourth or a fifth of all the locations that we have.

Daniela Tea 1:25:12 I think then what? Because I I'm not quite clear exactly where we got the list of locations. Perhaps it was when we it might be when we had worked on the integration. I can check on this with the tech team, but they we did do the initial setup. Perhaps if there's a separate list or something, we can take a look at that, but I think we were working with information that was provided to us when we were discussing the integration. So this is the process for adding additional properties. To your point, Mayte, if we are missing some, I think we would just need to. Understand where that you know like where this list um like where there is a full list.

Mayte Eme 1:25:56 Yeah, we have over 500 locations.

Lucas Nelson 1:25:57 Daniella, we can provide our, we can provide our point of view as an answer tomorrow after we follow up with Vinay on what where we were getting the initial mapping from, OK.

Daniela Tea 1:26:06 Yeah, Yep, definitely. I'll check in with with our team tomorrow. Again, understanding I can report back during our next session. Yep.

Lucas Nelson 1:26:14 Yeah, I just want to time check. There's 30 minutes left. I know we wanted to leave time for a retro for the call. Is there any? How are we tracking, Danielle?

Mayte Eme 1:26:15 Hey, I'm. And.

Daniela Tea 1:26:24 Yeah, let me.

Mayte Eme 1:26:24 Wait, hold on, let me just ask Scott, if you can take a task please with IT that work with with the vendor on this to make sure that we have every location in that mapping because we have over 500 and I don't think I even saw 100.

Scott Sorel 1:26:42 Well, I think it's just coming through the interface, my data. It's nothing anybody's going to hard code there.

Mayte Eme 1:26:43 Yes. Well, it has to be added in Adobe, right? Like copy paste the name so if we can get the list of locations from workbase, somebody from IT can go and start mapping those ahead of time.

Scott Sorel 1:26:59 They have to actually be done. They don't. They don't come in as part of the interface.

Lisa Cardia 1:27:04 No, that's what Daniela just showed us.

Mayte Eme 1:27:05 No, that's what they just showed us. It's not automatic. You have to. There's another panel where you have to paste the name that has to match work day and then add the image and then you got to go 1 by 1 by 1.

Scott Sorel 1:27:15 Oh yeah, yeah.

Lisa Cardia 1:27:17 It's like Workday recognizes the mapping, but the mapping has to be manually added. That's the missing part.

Mayte Eme 1:27:17 I know. Mhm.

Scott Sorel 1:27:26 Who added the ones that are in there now?

Daniela Tea 1:27:31 Adobe the Adobe technical team did.

Scott Sorel 1:27:34 OK. OK. So we can ask so, so I wouldn't be out of bounds Luke asking Vinay to do something like that.

Daniela Tea 1:27:42 I I think what we need though, Scott, is we need to understand what that full list is. We were operating off of information that was given, but according, you know, the team is saying it's not full. So we just need to understand where is that full list.

Lucas Nelson 1:27:48 Yeah.

Scott Sorel 1:27:48 Yeah. Yeah, we need to figure out where it comes from, right? Who's the source of the full? Like, you know who is the source of the full list?

Daniela Tea 1:27:57 That's correct.

Lucas Nelson 1:27:57 Exactly. We're gonna confirm.

Scott Sorel 1:28:04 Who can give us that full list?

Lisa Cardia 1:28:07 That's what we're asking if you can connect with IT on.

Scott Sorel 1:28:10 It's like a circle. We just say IT is like it's like it's it's like a nebulous cloud. At least I I can start asking around. I I will start poking around. Maybe. Uh, OK.

Lucas Nelson 1:28:22 Yeah, Scott, we're only confirming with Vinay what what what we got initially, but if it's not a full list, we don't have visibility to that.

Scott Sorel 1:28:23 Some.

Daniela Tea 1:28:26 Mm.

Scott Sorel 1:28:28 Yeah, I'll ask Michael. Maybe he knows. It's OK. I'll put it on my To Do List. It's fine. We'll figure it out. I'm somebody asked to have it. This must exist, right?

Daniela Tea 1:28:34 Right.

Lisa Cardia 1:28:41 Probably whoever handed it off the first time.

Daniela Tea 1:28:44 Yeah, we'll, we'll when we discuss with Vinay, you know, we'll try to track down where it came from and then we can confirm, you know, if there's a bigger, if there's more information that we can gather from that particular individual, but.

Scott Sorel 1:28:44 Yeah.

Daniela Tea 1:28:59 OK.

Scott Sorel 1:28:59 Yeah, I don't know who. I'll, I'll, I'll take it upon myself.

Daniela Tea 1:29:05 Right. OK. All right. OK. So just confirming what we had scheduled for today's session. So I think we did cover search categories, filters.

Yep. So we covered all the topics that were listed here. I had put time for. Perspective and also of course Q&A. And again the reminder for any burning questions you may come up with later on tonight, tomorrow before the next session, you know we we ask that you please put them within this confluence page. That way we can keep track and also respond. With in the comments as well. So I guess I'll pause here though and see Luke, how you want to handle this, this next step with the retrospective portion.

Mayte Eme 1:29:53 And before we get into retro because I just wanna make sure you didn't miss anything. We didn't see the career events or the job first.

Daniela Tea 1:30:00 Oh, so yeah, sorry, the what was the second part?

Mayte Eme 1:30:04 They're the same thing. I mean different names, but the same thing.

Lisa Cardia 1:30:05 Yeah, the hot, the hiring events. And then we didn't see those pages that are supposed to have the same cards on them. So there's a hot jobs page and there's a hiring events page, and then both those cards exist on the home page.

Daniela Tea 1:30:05 Oh. Yeah. So with regards to hiring events, that was my plan was to have that actually within the events session because it's not a specific component related to jobs, right? So like these here that we were covering today were job specific components.

Mayte Eme 1:30:48 OK.

Daniela Tea 1:30:48 With regards to the events content fragment. So that is something we are planning on covering, but that was not for today's session.

Mayte Eme 1:30:48 OK.

Lisa Cardia 1:30:54 And then those pages though. So obviously like the the hot jobs are getting pulled in from the hot jobs tag into that section on the home page, but they aren't. Are they also getting funneled into the the hot jobs page as well? So if you browse all hot jobs, do we have to add them manually to every location or is that pulling from the same feed?

Daniela Tea 1:31:15 Um, yeah. So this here, let's take a look at that. I'm going to just navigate to this specific page. We'll iter this looks like it's about jobs. Let's take a look at the configuration of the components on here. So this is just using that job listings component, right? And it's, you know, selecting my hot jobs. So you anything that's marked as a hot job should appear here on the hot jobs page. And then also if we were to go back to the home page. Because you there's that section there.

Mayte Eme 1:31:55 And before you move from the hot jobs page, where's the filtering for the hot jobs and the searching and all those things?

Daniela Tea 1:32:01 So the filtering is something that we had identified. I believe there was an open ticket for that. The filtering is not something that's currently part of the component, so it so we had identified that as a gap, but that is something that was being tracked in JIRA.

Mayte Eme 1:32:07 Oh.

Daniela Tea 1:32:17 So yeah, you can see you can see here with hot jobs, this is using the same component job listings with that configuration of hot jobs. So Lisa, I believe your question was if you would have to do it twice and the answer is no, you wouldn't have to make any updates. It's just adding that hot job toggle to jobs within the content fragment itself.

Scott Sorel 1:32:20 OK. And.

Daniela Tea 1:32:37 Elf.

Lisa Cardia 1:32:38 OK, but might be a different story for the hiring events below. I know you said we're going to do events tomorrow, but is this also getting fed?

Daniela Tea 1:32:42 Green. So this here, yeah, let's let's cover this tomorrow because this is using a a a different content fragment. It's not using jobs. So this one we can talk more about how this is going to work and how we can potentially try to reuse, you know, like say using experience fragments. Or something like that to make it so you only have to update it once.

Lisa Cardia 1:33:12 Yeah, you can just see though like in comparison when these are both pretty similar cards on the production site, a hot job versus a hiring event, how now looking at the hiring event, they're they're different widths and heights than what is standardized with the hot jobs like. Carousel or grid, if you will. And then even like the lengths here when there's like 3. See how they're not like an equal. It's just little things because we're using the same type of concept of a card in one section and a card in another, but they look so, so different.

Scott Sorel 1:33:38 8.

Daniela Tea 1:33:43 No. Mm-hmm.

Mayte Eme 1:33:50 And to check also for tomorrow, are we going to go over the queries and when we're bringing in different, you know, like properly like throughout the pages, we have different cycle queries right to bring different content that we're going to go through that.

Scott Sorel 1:33:57 Sure. Sure. Uh.

Daniela Tea 1:34:06 Um.

Lucas Nelson 1:34:06 Daniela, do you wanna pull up the agenda for tomorrow so we have a clear expectation set?

Daniela Tea 1:34:10 Yeah. Yeah, sure. OK, so tomorrow's supposed to be all about events. So again, reviewing the event content fragments, the the template page that's used for displaying events. The event detail component and the event calendar components. Um, I guess, Mighty, can you repeat what you were hoping to see?

Mayte Eme 1:34:34 So when we go, we have. Other pages in the career side right where we pull queries of content that already exists in other websites so we don't have to reuse them. So we need to go through those too.

Daniela Tea 1:34:49 I guess I need to understand like example like you're saying I I guess. Can you provide like very clear examples for us to be able to take a look at first?

Mayte Eme 1:34:51 OK. Yeah, like we have content in Cycord for that already exists somewhere else. So why do it again, right? We'll manage the same thing twice so we can just write a query. I don't know how you call them in Adobe, right? But we we call them scopes in Cycord and you say get me the cards from this folder and it displays on the page.

Scott Sorel 1:35:12 OK.

Angelika Akopyan (SHRSS)** 1:35:17 Danielle, you can go to our brands. I can show you what we're talking about. Go to cafes or casinos. Scroll down. Yeah, even more. Yeah, where? Which page you want?

Mayte Eme 1:35:17 Yes.

Daniela Tea 1:35:20 Sure. OK. Oh.

Scott Sorel 1:35:28 Sign.

Daniela Tea 1:35:29 This is on our brands. Is that what you asked for?

Angelika Akopyan (SHRSS)** 1:35:32 You go to a casino under our brands menu. You go to casinos or cafe cafes.

Daniela Tea 1:35:40 Um. Uh.

Lisa Cardia 1:35:42 I think that's the getting the those are the children pages, Angelica, of getting the name.

Angelika Akopyan (SHRSS)** 1:35:46 Yeah, yeah, I'll get here. Sorry, get in the game. Yeah. But if you go to the casinos, right, Scroll down. So for example, there are three, three cards we display and they display the same cards if you go to, let's say now to the you know where you go to cafes, cafes or hotels.

Daniela Tea 1:35:47 Oh, OK. Sure, sure, sure. Yes.

Angelika Akopyan (SHRSS)** 1:36:03 We display the same key cards looks like.

Daniela Tea 1:36:04 OK. Yeah, so, so this is actually, yeah, so this is, this is something that I believe we were going to explore the use of experience fragments for because I I understand what what you're saying and I was reviewing some of the tickets. I believe there are about 18 or so where you guys identified pages that have. Have some shared content. In this case, for this section here, it looks like these cards are essentially all shared amongst all these pages. And then for the art brands, I believe there's a section of cards here that should be shared across all the pages. Is that that's what you're referring to, Angelika and Mayte, is that correct?

Mayte Eme 1:36:43 Yeah, the yeah, the component. I mean all the functional different career side, those the video cards. I think there's a form somewhere, but no, we killed that, so never mind.

Angelika Akopyan (SHRSS)** 1:36:54 Reason that we can reuse, right? Instead of creating on each page separately, we would like to reuse.

Mayte Eme 1:37:01 Like the navigation, right? Um.

Daniela Tea 1:37:01 Right, So what I had and actually what I had done, I should have scrolled down. Yeah, so like I because I remembered seeing that ticket and what I was going to show you guys just to make sure and and see if this covered the needs is that instead of using a card carousel on the page, what I did was I set up. An experience fragment and then put up that card carousel and then just point it to it instead. So that way I could update the cards and then any pages that's referencing the experience fragment would also have the update. So like if I were to change Seminole Gaming to like Seminole Gaming 2026. In in the experience fragment, anything that has this experience fragment would also have Seminole Game 2026 and I that's what I wanted to understand is that that's what you guys are are looking for. Is that correct?

Lisa Cardia 1:37:53 That would definitely solve our issue of needing to use like if we updated one card that existed on 10 pages that it gets updated in one spot. But there is something separate that we do have to log that Angelica might have logged, which is that these cards that are related to when you were on the get in the game, for example that showed all.

Daniela Tea 1:38:02 Yes.

Scott Sorel 1:38:06 Yeah.

Daniela Tea 1:38:06 OK.

Lisa Cardia 1:38:13 All of our lines of businesses, the way that they should actually act is with a little bit of logic so that when you're on the casino's page, you wouldn't actually see the casino's cards now in that listing. So it shows all children of the get in the game, excluding the page you're on, if that makes sense. So it's taking what you just said, but.

Daniela Tea 1:38:15 Uh huh. OK.

Lisa Cardia 1:38:33 Also a step further of something we would would like to know, but it's definitely useful at least to get a shared source, you know, just in case we change the amount of casinos listed or something and then that only gets updated once of course. But I do want to mention that there is like additional logic with these queries.

Daniela Tea 1:38:34 I see. Yeah. I see. OK. Yeah.

Lisa Cardia 1:38:53 that Maite brought up.

Daniela Tea 1:38:54 OK, understood. So I think it sounds like then the experience fragment approach takes you guys like halfway there in the sense that reusable right now the way that this was set up on with an AEM is I think because during the migration it probably.

Scott Sorel 1:39:00 Oh.

Lisa Cardia 1:39:04 Yeah.

Daniela Tea 1:39:14 You know, it probably had like some. It saw that the logic was that the cards weren't exactly the same. So that's why these cards are all locally configured. So I think in terms of how you guys can do this, you guys can use the experience fragment. It would not have the additional logic for go live or you can.

Scott Sorel 1:39:18 Yeah.

Daniela Tea 1:39:34 Keep it as is where you're able to control it locally on each page. So that way it essentially is not showing like you're saying the casinos page would not be in here because this would just be a local instance of that carousel. So I think that's something you know. I understand definitely the appeal of the experience fragment. We want to update it once, so that way any page that's having it will then also be updated it. If that's the route you do want to take, knowing that in this case here it would show like the casino's card because you'll be referencing the same experience fragment on all of these pages, then this would need to be just replaced.

Scott Sorel 1:39:54 OK.

Daniela Tea 1:40:10 With an experience environment component. So there would be some authoring involved with that, but I think that would just have to be a decision that Hard Rock would have to make.

Lucas Nelson 1:40:15 So.

Mayte Eme 1:40:20 OK, Scott, then we need to follow up because this should have been set up properly, right? So we need a fix before we go live and we we're done.

Scott Sorel 1:40:27 Well, obviously.

Mayte Eme 1:40:31 OK. I mean it should. I mean I thought it was when Mohsin told us it was as is. We assume at least this site would get a structured better knowing that most of our content is shared across everywhere. So let's put a task for that one please. I have Moses figured that out.

Scott Sorel 1:40:52 Sure.

Mayte Eme 1:40:57 Oh. Oh.

Daniela Tea 1:40:57 Sorry, Charles, I didn't see that. I'm sorry.

Charles Baugh (SHRSS)** 1:40:57 Yeah, yeah, it's it's OK. That was a very lively conversation. I needed that to go first.

Scott Sorel 1:41:01 Yeah, that's fine, Charles. I just. I felt bad. I'll ignore you, man.
Sorry.

Charles Baugh (SHRSS)** 1:41:06 Yeah, my question was a logic question and I might have missed the answer to it in the very beginning when we talked about when we imported items from the API that the publishing happened immediately, right. So pretty much whenever that happened is live time. So say that we had 13 items, 13 jobs that got imported immediately. We realized after the fact like oh shoot, we need the.

Daniela Tea 1:41:16 Yes. Yes.

Charles Baugh (SHRSS)** 1:41:27 Take three of these down and reschedule them for later. Do would would it? What would be the best way to go about doing that? Would it be to resubmit through Workday and have them pull in 10 and purge? Or is it to purge those three? Is it a way to just go to those three individual and reschedule them manually? What would be the easiest way to take care of that?

Daniela Tea 1:41:48 Yeah. So this is one of our takeaways that we're going to discuss with our tech team. So as of right now, like you mentioned Charles, these are going to be coming in from Workday. So the Workday is the source of truth. It's pushing everything to A EM. So all these are coming from there if, if. You were to make a change in here right now and try to publish it. Work day changes would eventually override it because it's continuously syncing. So what we did want to check though with our our team is like for example, my team had called out earlier in the call of some instances where you might need to take down a job just like you're describing.

Charles Baugh (SHRSS)** 1:42:13 Uh, OK.

Daniela Tea 1:42:25 So we are going to check in and see if there's any way that you can do it through the AEM side, anything you know for an author to be able to handle those particular use cases, but we will not have that answer until the earliest tomorrow. So definitely making sure though that we will discuss that with our team. OK.

Charles Baugh (SHRSS)** 1:42:46 OK. Thanks. Yeah, I must have missed that. Sorry. Thank you.

Daniela Tea 1:42:48 Oh, no problem. No problem. Yeah. And I sorry, I think I saw somebody else's hand was off, but I missed it. OK, thank you.

Lucas Nelson 1:42:51 Joseph has their hand up.

Joseph Brondolo (SHRSS)** 1:42:56 Yeah, can we go back to the the the job search real quick?

Daniela Tea 1:43:01 Yes, um. OK. Yeah, sure.

Joseph Brondolo (SHRSS)** 1:43:08 Um, no, the I mean the filter from the Uh from the homepage careers homepage.

Daniela Tea 1:43:11 Oh. Look the filter from the homepage. You're talking about this section here.

Joseph Brondolo (SHRSS)** 1:43:18 Yes, yes. Can we go into configuration real quick? And where is the job category label located where it says job category label job category?

Daniela Tea 1:43:20 OK. Yes. Uh, yeah, this one. Um, let's see.

Joseph Brondolo (SHRSS)** 1:43:38 And there there's one for each one. There's, you know, the properties label.

Daniela Tea 1:43:46 Let me see. Sorry, man, I lost it one second. So we're asking about where is this specific field and you said the job prompt like where are these specific fields?

Joseph Brondolo (SHRSS)** 1:44:00 Yes, exactly. There's four of them because there's four categories there.

Daniela Tea 1:44:02 Let's see. I might need to check on how this is on how this is mapped to the UI.

Scott Sorel 1:44:09 OK.

Joseph Brondolo (SHRSS)** 1:44:12 Yeah, I had. I had a story for this and I I couldn't find those four labels there.

Daniela Tea 1:44:15 Um.

Scott Sorel 1:44:16 Thank you.

Daniela Tea 1:44:17 OK. OK, let me see if I wonder. Actually, hang on, I wonder if this is actually. I might have to get back to you on this. This might be something that that is potentially being used, like you like a user won't be able to see it, but it might be something that's within the markup. So let me get back to you on that one, Joseph. I'll add that to the list for things to cover at the beginning of tomorrow's session.

Joseph Brondolo (SHRSS)** 1:44:31 Oh. Mhm. Mhm. OK, great.

Daniela Tea 1:44:49 Great. Thank you. OK, Luke, did you want us to?

Lucas Nelson 1:44:54 Yes. Yeah, I mean, I I it's not gonna be like an official retro board or anything like that. Yeah, I just, uh, oh, yeah, go ahead, my too. Sure.

Daniela Tea 1:44:58 Oh, OK.

Mayte Eme 1:45:01 One more question. Sorry, one more question. Luke, I'm sorry, I'm seeing those huge logos. So did we ask you for the specs for the images? So we don't have that issue because some of the the things you were showing had like the images.

Lucas Nelson 1:45:07 You're good.

Mayte Eme 1:45:18 Even corrupt at at some point.

Daniela Tea 1:45:22 Yeah, that's something I think is is still that we're we're still looking into that my day. We do not have the spec sheet detailed out as of yet.

Mayte Eme 1:45:27 Oh, OK. OK, but since this site is going live soon, are we going to then who's going to go back and fix those images so they don't look, you know, like this when we're going to go live?

Lucas Nelson 1:45:55 What is happened as a take away, Daniela, to talk with Vinay and you know, whoever's supporting him with authoring might say, yeah, sorry, I.

Daniela Tea 1:46:01 OK.

Scott Sorel 1:46:02 Yeah.

Lucas Nelson 1:46:06 Any other questions?

Lisa Cardia 1:46:09 So are our questions just getting looked at in tandem with the like things that Angelica and team have already reported? Cause I think like a few of my questions go hand in hand with what she's reported.

Daniela Tea 1:46:09 Mm.

Lucas Nelson 1:46:21 Yeah, I think there's some synergies there Lisa and honestly Scott and Angelica, I hope you know we we we have a little bit of you know clarity from this call as well when when we have syncs with you guys moving forward at our tactical level that that'll.

Daniela Tea 1:46:28 Yeah.

Scott Sorel 1:46:34 This.

Lucas Nelson 1:46:41 Address some of the ones that we kinda have parked right now. So we'll we'll see though how that goes. But yeah, Lisa, um, they're they're they're kind of addressed in tickets and and you guys touched on on this call to answer your question.

Scott Sorel 1:46:46 Yeah.

Lisa Cardia 1:46:54 OK. Thanks. Sorry. Yeah, go ahead.

Mayte Eme 1:46:54 And I do have one. Oh, go ahead. No, you go.

Lisa Cardia 1:46:58 It's OK. You're you're fine. Got it.

Mayte Eme 1:47:01 OK, maybe I don't know who's this for Adobe or or our IT team, but I was looking at pagination, right? I I remember in Daniela was like 3 or 10 or 30. Is there any recommendation? Because I know we've done that before and we have performance issues. So have you guys tested and know what's the Max number of listings we should have on a page knowing we have like, I don't know how many Angelica, we have like hundreds of jobs.

Angelika Akopyan (SHRSS)** 1:47:32 800.

Mayte Eme 1:47:34 Yeah, so knowing we have 100, you know 30 seems like too few right to go like 30 by 30. And I know there's filtering, I know they're searching, but is there a recommendation on the Max number of jobs we should list per page based on your testing?

Daniela Tea 1:47:48 But.

Lucas Nelson 1:47:51 Are you asking Adobe that question, Maite?

Daniela Tea 1:47:51 Mhm.

Mayte Eme 1:47:54 I I don't know who did that performance and the load or stress testing. So that's why I said maybe Adobe or TJ, one of you guys should know the answer.

Lucas Nelson 1:48:02 Scott, I think you're gonna have to take it back and talk with with TJ and Mohsin. We we we don't currently have a performance testing resource. Yeah, right.

Scott Sorel 1:48:10 Yeah, I don't think that's a yeah, I I don't I that that's not on the radar at all my day. I I don't know why that would be an issue. It seems like chump change Rogers 30 or 800 or even 1500 as far as as far as listings when you think of like you know content I I that's not that's not heavy listing.

Mayte Eme 1:48:27 I I hope you're right. We had that issue before that we're like, oh, great, let's put 50 and boom, it crashes, right? So if we can just get an answer, please.

Lucas Nelson 1:48:36 Just to be clear, from the Adobe perspective, we're not qualifying it as light or anything. We just don't have any resource scope for it, Maite. Just wanted to be clear on our point of view.

Mayte Eme 1:48:42 Mhm. OK. OK. Thank you.

Lucas Nelson 1:48:47 No problem. Last call. Any questions?

Scott Sorel 1:48:53 Hey, so Luke, just with a couple minutes left. So how did you guys, you know, I'm just kind of curious on the side side, how do we think this went? Did we, did we get through Daniella, what you're hoping to get through for one session? Do we go slower? Do we go faster?

Lucas Nelson 1:49:03 Yeah, Scott that that that that that's a perfect foray. I I was gonna give my my point of view on a on the on the retro of this. We did get through Daniella's intended topics on on this. And which is good. So we're tracking, which is great. We're going to have to take a, you know, keep the retros going as we see how we do using the A I notes and then and and making sure we're capturing. Follow-ups accordingly from the questions answered here, Scott. So that's something for you and me to to make sure you know we're we're not leaving too many gaps. The other part about this call that I think might be slightly different than the other calls is Careers is an in-flight site that that it's going to go live next month.

Scott Sorel 1:49:39 Mhm.

Lucas Nelson 1:49:54 So there's a lot of extra heat and scrutiny on careers compared to just level setting on, you know, knowledge transfer of how the platform has been implemented. So I just wanted to make sure everybody's clear on that, like these questions that you've been asking. It's great to hear them. I I we had no issue with that, Scott, from our point of view, especially given on careers, OK.

Scott Sorel 1:50:17 Mhm. Yep, Yep.

Lucas Nelson 1:50:21 So yeah, so that that that that's that that's what my point of view is on how this went. But you know open to to hear any other feedback from you guys that that that you know you want us to hear, yeah.

Scott Sorel 1:50:31 Yeah, I I I do feel like it was rushed. I I I yeah. So I was just curious about Daniela in her mind's eye. She probably laid out what she would hoping to get through and if she got through it.

Lucas Nelson 1:50:42 Yeah, she she's she's good. She knows she's a she's a seasoned pro. So Yep, we appreciate Daniella. Any other feedback from you guys?

Scott Sorel 1:50:49 OK.

Lucas Nelson 1:51:09 Yeah.

Lisa Cardia 1:51:09 Is I think that we're gonna start piling up, if I'm being honest.

Lucas Nelson 1:51:13 I I completely agree in the background saying the same thing, Lisa, it's the tab's going to be quite big at the end of it with the gap analysis, but that's what we need to identify, right? Like we need to get it all out. You guys need that full baseline understanding.

Scott Sorel 1:51:19 OK.

Lisa Cardia 1:51:25 Yeah.

Lucas Nelson 1:51:28 That's what our intention is here. Yeah, so.

Lisa Cardia 1:51:30 I think like this first week is gonna be the true test. If we make it through what, 4 sessions this week, you'll see what that list becomes. And then it's like gonna paint the picture of how the rest of these like weeks are gonna go if they can go in the same manner.

Lucas Nelson 1:51:35 Mhm.

Scott Sorel 1:51:37 Mhm.

Lucas Nelson 1:51:42 Mhm.

Scott Sorel 1:51:44 S.

Lucas Nelson 1:51:45 Yeah, yeah, exactly, Lisa. Yep. Good feedback. Anything else, guys? All right, cool. Well, we appreciate your time, Daniela. Great job as always, and we'll look forward to seeing what you have in store for us tomorrow, OK?

Daniela Tea 1:52:05 Alright, thank you everybody for doing.

Lucas Nelson 1:52:06 All right. Thanks, folks.

Angelika Akopyan (SHRSS)** 1:52:07 Thank you so much.

Lisa Cardia 1:52:08 Thank you. Thank you. Thank you, bye.

Daniela Tea 1:52:09 Goodbye. Thank you.

Lucas Nelson 1:52:09 Right.

Charles Baugh (SHRSS)** 1:52:09 Thank you.

Gonzalo Calasich (SHRSS)** 1:52:09 Thank you. Thank you. Bye.

Charles Baugh (SHRSS)** 1:52:10 Everyone.

Don Middlebrook 1:52:12 Thank you.

Scott Sorel 1:52:12 Thank you.

Lucas Nelson** stopped transcription

Session: Events — 2026-02-11

SHRSS Adobe Knowledge Transfer-20260211_130309-Meeting Recording

February 11, 2026, 6:03PM

1h 55m 18s

Lucas Nelson started transcription

Lucas Nelson 0:11 OK, sounds good. Recording started. As we said yesterday, we would start this call by just kind of briefing on the the, the, the questions and and what answers we were able to to to to provide so far. To provide so far on the the Confluence page, we did, we did want to make sure we acknowledge that yes, we saw all the questions and we're working through trying to provide answers and that's what we wanted to start with. Daniela, I think is just kind of. Propose how we want to handle the number of questions we're seeing. Is that right?

Daniela Tea 0:49 Yeah, yes. Let me go ahead and share the confluence page. So thank you everyone for providing your questions and especially in this tabular format, I think this is great. They were able to clearly see what's being answered and by whom. So right now I have this sorted by the rows are sorted by answer. So you can see there are still things that our team is planning on reviewing. We just of course need just a little bit more time. We understand that you know that these questions are going to come after these knowledge transfer session like the knowledge transfer session. That we just attended. So what our plan is in order to be able to make sure that we're answering things as accurately as possible and with the proper context, we are just asking for a little bit more time for us to be able to go through these questions. The onshore team will be reviewing these after the page is complete. So Maite, I do appreciate you tagging me to let me know when the questions were in a pretty good state because as I was refreshing, I was seeing more added. I wanted to make sure you guys were at a good stopping point. So what that means is we would need some time for us to be able to review them and then we also need to connect with our GDC team members to be able to ensure that they are also providing answers where necessary, specifically with the technical questions. And as we're responding, we also recognize that there might be instances where, for example, you'll see here we have tagged some other folks to to be able to chime in. So there are times where we will need somebody else to address the part of the question that Adobe is not able to answer. And also we also recognize that based off of the response that you're getting asynchronously, you might have a follow-up or something still related to that or perhaps need some clarification. What we're asking with with those kinds of instances is if you could perhaps highlight the specific row, take this for example. If this is something where you have a follow-up question on, if you could highlight the row and add your follow-up question to the existing row, then our team knows OK, this is something that we need to look back at and address. So that would just make it easier for us to be able to

group things together as well as be able to understand what is still. Needing to be answered. I'll pause here to see if there's any comments or questions about this process.

Mayte Eme 3:24 Makes sense and and thank you. I know there was a lot and I tried to combine everything. At one point I just kept my name because it was easier copy pasting and I deleted a few that I thought were duplicate. So hopefully that helped and I was thinking I I'm seeing in your screen and and I glance at it in the morning the ones that are assigned.

Daniela Tea 3:33 Yeah. OK. Mhm.

Mayte Eme 3:44 To SHRSS, should we put them in a separate table or tag them somehow so they say separate from the ones assigned to you as in you know Adobe Team versus SHRSS for answers?

Daniela Tea 3:56 Right. So I guess, yeah. So let's take a look at these. For example, like you mentioned Mighty, they are a couple of these are all all something we would need SHRSS inputs on and I think we need to understand for example, we've tagged Shoab and and TJ here. I believe TJ is on the call. What is the best way to get these questions? To you is confluence appropriate to tag and then have you review and answer here. Is this something that needs to be brought out to a separate location? Yes. Sorry, is TJ on the call? Sorry, I can't actually see the attendee list. Oh, OK.

Scott Sorel 4:40 He was. He was. He's here. I see his name.

Daniela Tea 4:44 Yeah, I think we just need to understand because you know, we could certainly tag them here, but if this is, if Confluence is not the right place to be able to get those answers from those individuals, we we want to make sure these aren't getting answered, but they need to be directed in the.

Scott Sorel 4:58 Well, I I think, yeah, Danielle, I have a suggestion in that like for example, there were some for show up, right. So I I I hit them up on Webex chat before we started and I think that we're going to have to do something like that because I don't think you get too many emails from councils of it's very easy to miss them and we really want to make the best use.

Daniela Tea 5:04 Yes, that's correct. OK. Yeah.

Scott Sorel 5:17 Of time and not be waiting. So yeah, so I guess when we get we get done, I I can just take it upon myself and take a look really there and try and nudge people of, you know, do your homework. But I don't know. TJ, what do you suggest? Because like I reached out the show, but he didn't answer me and he's not here.

Daniela Tea 5:19 Sure.

Scott Sorel 5:36 That's not really going to get us where we want to be. If anybody else has a suggestion on, you know.

Lucas Nelson 5:45 Scott, let's not spend the paces here. Can you have an offline with TJ and Shob and?

Scott Sorel 5:48 OK, Yep, I'll have it offline. But Luke, in general, just like you did with me before earlier, if there's somebody who's not really leaning in or we need something, let me know and I'll just go start rattling cages until we get answers. All right.

Lucas Nelson 5:58 Let let me know what the outcome is about how you want to handle that and and then we can follow suit with how you're gonna handle SHRSS assigned items. OK, Scott.

Scott Sorel 6:00 Yeah. Yeah. Yeah. Yeah, yeah.

Lucas Nelson 6:11 All right. Thank you. All right. Keep going, Danielle.

Daniela Tea 6:11 Yeah, sure. And Yep, the other point I wanted to to mention is we also realize that some of these questions, since we're trying to have them isolated to just the specific session that we had and while I I know that a lot of these questions are related to the careers website.

Scott Sorel 6:13 Let's get going, Daniel.

Daniela Tea 6:31 There are times where, for example, like with the video testimonials, which are video cards, that's going to be covered in a separate session. So what we are planning on doing is we're going to have essentially like a question backlog page and filter out those questions and put them there so that way they can be moved to the appropriate agenda. End of page when we actually cover it. So there will be visibility as to which questions have been removed from this table and there will be moved to that backlog page. And then once those new agendas are appearing, for example, we have say like a card component. Pretend we have a card component training session. We'll be adding any questions related to cards that were not answered within this agenda added to that specific agenda. So I'm going to pause here to see if there's any questions or comments about how some of these questions are going to be removed from here, but we will be addressing them in the future. OK. Great. Okay. Was that? Yeah.

Lisa Cardia 7:33 If you don't mind, sorry, if you don't mind, I just wanted to add and it was just like one that I happened to glance over. So some of the questions that we did include here, I hope that you don't feel like we did answer that in the call. This was more so to make sure we have in

writing in case anyone else came through with the same question and since it was explicitly asked in the call, we might have added it here just for that.

Daniela Tea 7:39 Mhm.

Lisa Cardia 7:52 Answer. We noticed like something wasn't the same answer as what we got in the recording, so.

Daniela Tea 7:57 Right. Yeah. So Lisa, that's where I was saying we need a little bit more time. So that way our teams can have a connect session with the offshore team. So the onshore, onshore team and offshore team will be connecting. That's why we just need another extra 24 hours. before we will be putting the answers to these questions.

Lisa Cardia 8:18 OK, but not I'm talking about ones that like had the answer answered on answered by not blank ones. So I just wanna make sure it's not like a disconnect there.

Daniela Tea 8:26 Yeah. Yeah. So, so we actually did connect after some of these were filled out and as we were reviewing some of the answers and responses, we that's why we recognize that, oh, we do need to make sure that we have our sync time before we are just posting things on here because keeping in mind that for example, our offshore team isn't necessarily on the call. Not be interpreting the question the same way that it was asked within the call itself with some additional context. That's why our proposal is for the onshore team to go through first before we hand things off to our offshore team to answer any other technical questions. So if you're seeing discrepancies on some of these answers, we're hoping to get that resolved with the.

Lisa Cardia 9:09 OK.

Daniela Tea 9:09 Process. Yep. Any anything else before we move on and and just to confirm that the team is because I'm not clear if you all are are getting notifications when these are being responded to or if you guys are able to review this or or or were notified that this page was updated with some answers. Just want to make sure that your team also has time to review these answers as well and I see Gonzalo's hand is up.

Gonzalo Calasich (SHRSS)** 9:49 Thank you. So I I do have a question. So does it means that we need to go first to this confluence space to put a question or or for example will this be for components that we already went through or or we can raise the questions here?

Daniela Tea 10:04 So these questions here are specifically for the session that we had. So ideally, you know, we'll certainly try to answer as many as we can during our actual call. However, we do realize that that the team needs time to also come up with additional things. However, the intention of this is for questions related to the session. And anything that's not related to the session, we're planning on adding to our question backlog, which will be a new page added here. And as we continue to cover more topics and we create more agendas, those questions will be moved from the question backlog to that specific agenda page.

Gonzalo Calasich (SHRSS)** 10:41 OK. Thank you.

Daniela Tea 10:43 Yep. Great. OK. So I think in terms of after actions, I think Luke, if we can just put a reminder when we send out the recording and transcript for the process with regards to like highlighting and that sort of things and then also perhaps a link to the question backlog and I can we, I can work with you on that after the call, but we can send.

Lucas Nelson 11:06 Yeah, right, right on. Sounds good.

Daniela Tea 11:07 That out as a follow up. OK, perfect. Awesome. Thank you guys. All right, so let's go ahead and get started then with our next session, which is events, and I'm going to pull up all my test pages and such over here. So one second as I get situated. Alright, OK. OK, so let's go start from the very beginning as if we were just logging to AEM for the first time. What I'm going to do first is I'm going to review the event content fragments and we're going to create a new one and also review some existing ones just so you can see. See some of the data that's there and then also we're going to take a look at our event related components, specifically the event calendar and the event detail page. We're also going to create a new event detail page using the event detail template. All right, so oops, did not mean to click that. OK, so now I'm going to navigate first to the DAM to where our content fragments are located. So I clicked on Assets and Files and we are in our SHRSS folder and then we are in CF. And just like we saw with jobs, there's a separate folder for events here and we're going to take a look at the existing structure and I just want to to explain how this was previously set up during the migration. So here right now we have cafe and hotel events and the breakdown for those as you guys can see is the line of business, the specific property, the specific language and then it gets broken down by date and month. And then finally based off of the month, this is where all the events get dumped in. So to be clear, this particular structure is actually set up for ease of authoring. The understanding is that yes, there can be several events, you know, per month, per year, and so this here is broken down. So that way it's easier to be able to find events. So you're not dealing with an infinite scroll. So, so just to be clear, that's the reason why in some cases you know like in in here you don't

see like 2026, you don't see previous months or anything like that because during migration the perhaps there were no events for that time frame. But if for whatever reason you need to say change the structure, this is this is a structure that we had set up for the ease of authoring and being able to find events based off of a specific month. So we have followed that. For all the locations for across hotels and cafes, we followed that structure, but just wanted to make sure that you're aware. And Don, if you're listening, especially if you are, you know, thinking about how this could be modified in the future, just want to let you know this is this was a set up we had, but it was. Use of authoring. OK, all right. So with that being said, what you can see here is I've created a folder called KT and so this the way that this would work is if for example say you all have a new hotel or something, you would put it within hotel, you would put it within cafe, but if you all have. Have say a separate line of business entirely, it would probably make sense to create a completely different folder. So that's what I've done here and I just tried to follow the structure that we had previously just so that way I could keep track of the events that I was creating. So in this case you can see I have.

Scott Sorel 14:39 OK. No.

Daniela Tea 14:53 My month folder 02 and 03 within 2026 and so then I just put some content fragments here. So what I'm going to do now is just within this 02 folder I'm going to create a new content fragment. Using the event model. And let's just call this test event. And I hit create and now the content fragment is created. Now one thing I want to note is that by default the editor is displaying in the new content fragment editor and so you you may notice if you have ever toggled this off that there are actually. A few differences between the new editor and the old editor. So just to show you, you can see it's it's laid out a little bit differently and I did want to inform the team here that we are actually having a support ticket created with the product team, so that way it will default to the old. So that way an author does have to change it. The reason why we're doing that is because within the new editor there are some differences within the way a field is rendered, and as we were doing our testing, we wanted to make sure that authors are not running into any issues or. Discrepancies by using the new editor. So once the support ticket has been fulfilled, we'll notify the team. But the way that you would be able to see content fragments moving forward is with this view. So I want to make sure that the team was aware of that. That's something that's in progress from the Adobe side. OK, so for the time being though, I'm going to just show when you open up a content fragment, it's going to look like this. I'm going to toggle it by switching from new to old just for the time being now. In the future you will not have to do that, OK. So here is my new content fragment for test event. Just going to open

this up a little bit wider and let's take a look at the fields that we have here from top to bottom, and then we'll take a look at the event calendar and see how this all maps out. All right, so for my title, I'm just going to put my test event. Again, I can name this anything. It doesn't have to match, but in this case I'm just going to put it here. I'm going to put my start date. I'm just going to set it for, let's say, February 15th. I have my start time which is a required field. I click here I can put the hours and minutes set AM to M. So let's say 9:00 AM. You'll notice end date is not a required field, and that's because if your start date and end dates are the same, you don't need to fill it out again. However, you do need an end time. O I'm going to just put. 12:00 PM, 12:00 PM All right, so now let's move on here to the banner image and banner image alt text. And I'm just going to set an image here. I'm just going to take something from the dam. So this is going to be something random I'm just going to select just for the purpose of this and I can put my alt text here. And then here is another image field. This image field is going to be displayed on the event details page, which I will pull up once this event is created so you can see how it maps and I'm going to set another image from the dam. So I'm just going to choose something. Let's choose that. And this was, I think it was Rock City. OK, so this is a required field. The banner image is not and I'll show why in a second. But we as an author, we need to make sure this field is set up so it's displayed on the event detail page. As I continue to Scroll down, we do have event status. I'm not going to set that right now since it's not required, but we will edit this event content fragment so we can see how that gets displayed. Here's an event status message, also not required. Description is though, however. We also have an additional detail section which appears underneath the card and it's not required, so I'm going to leave it blank just for the time being. The CTA links are also not required. That's because by default if you don't put anything here, it should have a link. That will take you to the event detail page. So for right now, let's let's leave this blank and then we can see how that gets populated. We also have categories and from here this is actually pointing to a specific event category tag section. So there in the tagging structure there's a folder called Event Categories and these were the tags that have been identified for events. I recognize and realize that there could be additional tags you might need in the future, and so the way that that would be updated is by adding those tags within the tagging section. Right now though, this is the list that's currently under this folder, so I'm just going to check something for the time being. And then for location reference, what this is going to do is as an author you are going to select which location that you want your event to be associated with. And this is all content fragment based coming in from DPLT so. In this case, I'm just going to select this. I recognize that here this ID that's coming in. This is, you know, it's not clear to me exactly what this location is. So I and I understand that that may be, you know,

difficult as an author to be able to choose. For the time being right now the way that I have been checking is by clicking on edit and then seeing what the property legal name is for that particular content fragment. And I lost all my information because I forgot to do my new dev. So one second. All right, we're going to make this really fast. All right. So that is something that I believe would make sense to put on that gap

list is to perhaps have that information for the title on on the content fragments for ease of authoring use. And I'm going to go back and check my category. And then I'm going to select a location here. I'm just going to select the the hotel here at Maya, which I believe was just here. I'll just use this. It's fine, OK. Underneath here you'll see there is a featured check box. If I check this, and again we'll show this in a bit once there's a couple more events. If I check this, what this means is that this particular event will appear at the beginning of the calendar for the specific month that I'm viewing. So in this case we're in the month of February, so. Even though the calendar will display chronologically, if I put this as feature, this will be the first event depending on if there's other featured events. So we'll see that in a second. You'll also see here this event ID. This is a read only field. This is getting. Generated as it's passed as part of the URL which on the event details

page and we'll see how that is right now since it's read only. Obviously you're not able to change that. If that's something that is desired in the future, that is something that we would want to discuss during the gap analysis portion. The reason why we have this generated event field though is to prevent any sort of duplicates from occurring. OK, so I'm going to go ahead and save my event content fragment and I'm going to close this. So we can see here this is my test event and I am going to publish it.

So that way when I look at the calendar I'll be able to actually see it on there. So I'm actually going to pull this over here and I'm going to navigate to my test calendar page that I had created. So I went to sites, SHRSS, corporate careers, English and you can see I

created some test calendar events and I'm just going to open up my page here. And you're going to see right now that my specific event that I just created is not appearing here because I did not publish it. O let's go ahead and publish the event. OK, so I'm publishing it. It's saying OK, this is the content fragment model of the content fragment I'm just publishing. When I refresh this page, I'm also going to view it as published, but when I refresh this page. Now I can see that my test event has appeared, so I want to make sure that process was clear. I'm creating events. You may think why is it not on the calendar. You want to check and make sure that the event is actually published and then when you refresh your page you should see it there. I think I saw a hand up, but not sure who it was. Sorry.

Gonzalo Calasich (SHRSS)** 24:56 Hi, this is Gonzalo. How are you? So we are seeing that you're using the view as publish and we're seeing that changes come really fast, but when you actually navigate to the publishing environment, they take too long to to show up.

Daniela Tea 24:57 Sure, go ahead. Mhm.

Gonzalo Calasich (SHRSS)** 25:14 For example that the jobs right when you were demoing the jobs so they they were coming really fast but we were trying we were playing with the jobs and we created a new one or make a change but we couldn't see the the changes. If we if we use the view as published this yes we will be able to see it but we will not be.

Daniela Tea 25:20 Mhm.

Gonzalo Calasich (SHRSS)** 25:33 Be able to see it on the published environment. Is there a way so we can, you know, expedite that publishing or we just have to wait the 5 minute rule because we waited more than 5 minutes many times?

Daniela Tea 25:45 So. Right. So I think this would be something we would need a little bit more information on Gonzalo like you know to to take a look at like for example, is it something that's being cached? Is it because someone else is publishing the page? You know that I'm not quite clear exactly like this the exact situation. But it sounds like to me you guys said on the actual. So if we were to go to like like you're talking about this publisher like, is that correct?

Gonzalo Calasich (SHRSS)** 26:16 Correct, yes.

Daniela Tea 26:17 OK. And what you're saying is that when you added a new job, was it through Workday or was it through just like a content fragment?

Gonzalo Calasich (SHRSS)** 26:18 Oh. This is just like a contract requirement.

Daniela Tea 26:27 OK, so you're saying when you added a new job, you're unable to see the job appear on here even after you published the content, correct?

Gonzalo Calasich (SHRSS)** 26:29 Oh. Correct, correct and we were able to see it on the on the authoring using the view as published, but it was not reflecting in this in this page.

Daniela Tea 26:37 I. Mhm. OK.

Andy Lambert 26:47 Is it ultimately showing up, Gonzalo, or just or is it not showing up at all or is it taking time to show up?

Gonzalo Calasich (SHRSS)** 26:53 No, I'm not showing up at all.

Andy Lambert 26:55 OK, so then now there's some kind of blocker happening in the environment.

Gonzalo Calasich (SHRSS)** 26:58 Most likely it looks like cash.

Andy Lambert 27:02 Well, it depends if the page is. I would have to check with Vinay on how this page is loaded, but if it's if it's front end then it shouldn't be cached. If you publish the content fragment right, it should just show up if it's enabled and all of that so.

Gonzalo Calasich (SHRSS)** 27:20 Yeah, I just wanted to bring it up that because I know that you are using content fragments. So I just wanna if you can show us on the on the publishing and see if that if the events are having the same issue.

Andy Lambert 27:21 And. Yeah.

Daniela Tea 27:24 Mhm. Yeah, so let's actually publish this page. OK, so this page to publish and let's take a look. What do I call this corporate KT calendar?

Andy Lambert 27:33 No.

Daniela Tea 27:47 So this is the first time I published this event, so there's absolutely no cache. So this would certainly, you know, be displayed pretty quickly. But Gonzalez, throughout this call, because I will be adding some more events, we can certainly kind of monitor that to just see, you know, if we're experiencing any issues with. Publishing new events and how quickly it's getting to this publisher link. OK, Yep, sure thing. OK, so let me navigate back though to the actual components. That way we can take a look at how our content fragment maps to this and we'll continue monitoring the published link. So I'm going to open up again.

Gonzalo Calasich (SHRSS)** 28:11 Thank you.

Daniela Tea 28:27 My test event. And we are going to take a look at this test event here, which is on my calendar so we can see. I'm going to make this smaller second, OK. So we can see here test event is appearing here on as a title of the card. We have our start date of 2/15/2026, 9:00 AM, 12:00 PM. So that appears here within the time section. Here we have our location. This is based off of that location reference that I had selected. It's pulling in the address and you can see when I hover over this, there is a URL associated with it. In this case it's Playa del Carmen. So that that information is coming based off of the location reference that I had made. And then here you'll see, as I had mentioned before, I did not put anything within the CTA links by default. What's going to happen, it's it's going to show a. Another a CTA button here which is going to link to the event details page if you leave that blank.

Scott Sorel 29:38 OK.

Daniela Tea 29:41 Oh, and then also the image that I selected here, my guitar smash, that's what's being displayed here. So this image field corresponds with the image just displayed in the card. I'll pause here to see if there's questions about how the content fragment fields translate to what we see in the event calendar.

Lisa Cardia 30:01 Yes, Daniela, I have some authoring questions that I think might be useful at this time.

Daniela Tea 30:07 OK, sure.

Lisa Cardia 30:08 OK, to start, is there availability for us to put an override for the date field? There's a lot of times we have events where we like to change it out to not say the actual month and day and the time, but rather, every Wednesday through the month of February, something like that. Do we have an override?

Daniela Tea 30:30 So that's not available within the event content fragment right now. When we take a look at promotions, there is that field and I think that's probably the behavior that you're that you would like to see here in events too and we can kind of confirm that if that's the kind of behavior you would want in events. Um, during the gap portion, but we will take a look at promotions, Lisa, I think in like 2 days or so.

Lisa Cardia 30:54 OK, the same question would go for the location. I know that those would be two placements that authors like to override from time to time, just requested from properties. And then my second question is the option for the image. It looks like we could add.

Daniela Tea 30:57 Mhm. OK, mhm. Mm-hmm. OK.

Lisa Cardia 31:12 Additional What happens if we add an additional? There was another add below image.

Daniela Tea 31:17 I believe it just defaults to the first one. I can certainly test that out later to see. Usually as we've been when we were doing the migration and such it was only using just one image. But this yes this is a multi field but I don't think it's going to take into consideration the other images but we can confirm that.

Scott Sorel 31:26 Yeah. OK.

Lisa Cardia 31:36 OK, I'm just writing this down at the same time. I'll hold off on my other question related to banner image. I know you didn't get to the actual more info page yet, so my question is going to be related to why we would even have this as an option. Would it override it if it's configured from the page template? So we can skip that one.

Daniela Tea 31:42 Mm.

Scott Sorel 31:43 Mhm.

Daniela Tea 31:45 Yep. Mm-hmm. Sure. Yeah, we'll take that.

Lisa Cardia 31:54 But for events, for the event status, is there a way that we can do some sort of logic so that if presale we have very specific presale dates which would then show you know a presale disclaimer of a password. But then once that presale date and time have passed, we revert, we basically revert back to a.

Daniela Tea 31:58 Mhm.

Lisa Cardia 32:14 Where the card might just say on sale. So is there any logic I guess is my question behind the event status labels because typically we fill out all at once an announce date and on sale date and pre sale dates.

Daniela Tea 32:17 Mhm.

Lisa Cardia 32:29 And then it will know and recognize the state of the the date in which it's presale and then go back to normal state. Does that make sense?

Scott Sorel 32:37 Oh.

Daniela Tea 32:38 OK. So yeah, let me let me reiterate what I've heard. It sounds like what you're saying is that if you were to create a new event, you are aware of the different event statuses and the and how long those would be displayed. And so the ask is to be able to associate multiple event statuses with a date. So that way you would just automatically display on. To the card without the author having to come in every single time to change the status. Is that correct?

Lisa Cardia 33:03 Exactly because like probably events are our most frequented item I'd say. So for content author to only have to add the event once filling out every field so that we don't have to remember at 9:00 AM do we need to go change the state of this at 10:00 AM did it change back kind of thing especially cause pre-sale dates.

Daniela Tea 33:04 OK. Hello.

Scott Sorel 33:23 So.

Lisa Cardia 33:23 Can be way outside of business hours or weekends, so just something to take into consideration, but I can move on. The other question was the call to action link that is the more info.

Scott Sorel 33:25 OK.

Daniela Tea 33:26 1. Yes, yes.

Lisa Cardia 33:40 We skipped it because it's automatically getting populated. There are a lot of times that we don't make a landing page associated with the card just because there's not more information for that that person to get. A lot of these entertainment acts are like very local level artists, so we don't give them more than what it is of date time.

Daniela Tea 33:43 Mhm.

Lisa Cardia 34:00 An event location, so we would hide that call to action. Is there a way to hide that button so that if we're not putting one, there just is none?

Daniela Tea 34:09 I see. OK. I believe that the way that this was we were doing the initial requirements. The understanding was that there was going to be an event detail page associated with it and that's why this is the default. Even if you put anything sounds like it would be useful that if. There was say like some sort of toggle or something to be able to just hide it entirely. So I guess Lisa, to be clear, like in terms of say sending out the event to like people like that means that you wouldn't, you would have to send out the full calendar. Is that currently what the team is doing right now?

Lisa Cardia 34:33 Yes. Yeah, so there's some property sites that will use event calendars just to show weekly free entertainment. And so it doesn't really give them much to click more when when we don't build out pages for those artists outside of like the very ticketed events that we can share much more detail.

Daniela Tea 34:51 Ah, OK. I see. OK.

Lisa Cardia 35:02 So it's just having the flexibility there so that we don't force a user to click more info and then ultimately they don't receive more information.

Daniela Tea 35:10 I see. OK, yeah, so so to your point, I understand the use case now. Right now it will default and it will just essentially just if there was no, say there was no like additional details or you know you didn't, you didn't set anything else, then it would show basically the exact same information. On its own page, but we like, I understand what you're asking for to be able to actually prevent that by not having that that display. I see. OK, yeah. So yeah, definitely that would be something that would be added to the gap since that would be a slight change from what we have right now.

Scott Sorel 35:31 Right.

Lisa Cardia 35:36 Exactly. It's just more for the user's experience. Um. Great. And then my other question is related to the location reference, since every property would essentially need to know their number from the DPLT until that there is a way that we would know that 3150 is whatever property.

Daniela Tea 35:53 Mhm. Yes.

Lisa Cardia 36:04 Is it at least limited by user access? Because my assumption would be if you've already built the content fragments in the correct property folder and timeline that we wouldn't need to then select the property again somewhere as the source. So I would just hate for someone to choose the wrong location reference and have access to. Amsterdam if they're adding a Mexico event. So my question is the location reference, is there a way to limit it to the user so that they're only, especially in cafe world, only adding events for their location and not by mistake?

Scott Sorel 36:28 No.

Lisa Cardia 36:39 Controlling someone else's? Or does that not get impacted if the wrong one is selected here? I just am finding it difficult to follow along if we've already put the content fragment in the right folder path, how it's getting picked up by a property location reference.

Daniela Tea 36:48 Mm. Mm. OK, so let's take a look at, yeah, so the location reference you can actually see here and I think we're taking a look at the event calendar configuration right now is is hopefully going to be able to shed some light. So the location reference, this is not actually something that you even need to fill out right now. What you're asking for is if I as an author am just a cafe owner specifically for say this Mexican location, you're saying I ideally I would not be able to have. To even select it, is that correct?

Scott Sorel 37:30 Oh.

Lisa Cardia 37:32 Yeah, I just don't understand if we've already built it in the path that it needs to be while now we need to also reference it. But if that's for the filter, I guess that makes sense. It's just now I want to make sure that no one has access to put a different location or else we're going to see, we're going to see mistakes being made, if that makes sense.

Daniela Tea 37:39 I see. Yes. Yeah. Right. So yeah, this location reference because you can see I when I created my content frag, sorry, one second, I'm trying to open up. OK, here we go. You can see in my content fragment what I was trying to highlight here. You can say put Valley here because I was just showing this similar structure even though I put Valley here.

Lisa Cardia 38:07 Yeah, right.

Daniela Tea 38:10 Obviously I did not create a Bali event and that's simply for, you know, authoring organization like like you like you saw here. Yeah, this was necessary, correct. That's correct. And if I wanted to, let me show this here right now, the reason why it's showing.

Lisa Cardia 38:17 Got it. So this is necessary for it to actually work, but the rest was organization.

Daniela Tea 38:29 All my events, regardless of the location, you can see I actually had. I have four events located in this folder. Those four events are from different locations. You can even see them displayed here. This is Ontario. This is Mexico, Indonesia and Florida.

Lisa Cardia 38:37 Mhm.

Daniela Tea 38:46 And because those four content fragments are from different locations, the location filters and populate it with each location that they're from. Same thing with region, right? And then categories, it's a roll up. So I think in the instance of say like a specific cafe, what would happen is that this content.

Lisa Cardia 38:55 Mhm.

Daniela Tea 39:05 Content fragment folder path should only point to the events for that specific location and if there is a mistake within the content fragment, that is something that would have to be updated within the content fragment itself, but you would be able to see it based off of what if anything else were to appear on.

Lisa Cardia 39:06 Yes. Mhm.

Daniela Tea 39:25 On here if that makes sense. So the concern about like say this particular content fragment appearing in in the in someone else's section that is being prevented by the root path of the content fragment folder.

Lisa Cardia 39:35 Yeah. So it won't show up on someone else's site, but it will still mistakenly add that location to this site's filtering.

Daniela Tea 39:46 That's correct, yes.

Lisa Cardia 39:48 OK, so it's probably still something we want to look into, but I I understand now.

Daniela Tea 39:50 Yeah, understood. OK, right.

Lisa Cardia 39:55 Sorry, was Scott saying something?

Daniela Tea 39:57 Yeah, I heard someone else. Did someone have a comment? No. OK. Umm

Lisa Cardia 40:04 OK.

Scott Sorel 40:04 Probably me just talking to myself. Sorry, I should mute myself.

Lisa Cardia 40:06 And then and then I my my last question, cause I can just and yeah, it just sounds like you're sighing to be honest. The last question I'll.

Daniela Tea 40:07 Oh, no problem.

Scott Sorel 40:15 No, I'm I'm multitasking. Thanks to Luke. Got me in trouble, Luke.

40:19 My bad.

Daniela Tea 40:25 Sure. Mhm.

Lisa Cardia 40:32 Associated image. Do we have an ability to just populate A defaulted image and then we override when there is a specific one in in use? Not select a generic, but rather default to generic.

Daniela Tea 40:32 M. Default generic. So right now I don't think that is added because this specific image. Hang on, so I'm just going to. Open this up. We're just taking a look now at the event detail page so

I can show you that specific image was all supposed to be here. But what you're saying, Lisa, is that because of the nature of some of these events, there would this might not need to change out for many of them. And so you want the ability to not have to fill this out every time and instead. The component side set like a default kind of like how we I believe we can do that like we saw with the what was it the jobs listing component is that correct?

Lisa Cardia 41:27 Yeah, it's it was just more so for convenience of author to make sure that we're not ever running into an issue if a blank image or anything of that nature, if they didn't select one. So there was just always something in its place, but I can add it to the sheet and I I apologize, I know I derailed a lot, but I thought my questions were beneficial to most people on this call.

Daniela Tea 41:40 I see. Oh, it's OK.

Lisa Cardia 41:47 So I'll I'll let the rest of the crowd speak so you can move on with the other event components.

Daniela Tea 41:52 So so just to be clear though, this content fragment cannot be like I and I understand what you're saying about a default, but the concern about an image not being filled out, this can't be saved unless an image is there, just to be clear. So if there is like a default.

Lisa Cardia 42:07 OK.

Daniela Tea 42:10 Like in the DAM, if there's like a default section or image that can be used for the time being. If the concern is that an image might not be used, they can't save it or publish it without an image here.

Lisa Cardia 42:21 OK, understood.

Daniela Tea 42:22 OK. All right. Let me go back to the calendar component. Let's get ourselves situated and oriented first. Just resize this. OK. All right. So we took a look at how these. Existing fields are mapping to the calendar portion. Now I'm going to open up the details page that I had just shown you guys so we can see if there's anything else on here that that we had mapped that wasn't present on the first page. Going to Scroll down. So here we can see the description description of test event that has now appeared here when you actually view the specific event details page and that is that is actually it for additional information because I left everything else blank. As I populate this, we'll publish it and then we'll refresh this to see what happens. But going back here now, let's take a look at these filters that we have here. As mentioned before, the region and location filter is Yep.

Mayte Eme 43:28 Good question because I just got confused. What you just showed us, you said it was a detail page, but it looked like a card. I mean it it.

Daniela Tea 43:36 This is this is so you can see here I have this is the page URL KT event if I were to go to AEM which let me do that on. going to just open.

Mayte Eme 43:47 But is this what you're showing supposed to be the details of the event or just another listing of events?

Daniela Tea 43:51 This is the details of the event. Yes, this is the details of the event.

Mayte Eme 43:55 Why does it look like that? Looks like a card listing.

Daniela Tea 44:03 They pull up. My page. So what I had done for this detail event page is I had created a new page and we're we can do that right now actually. So this is this is the KT event page that you can see right here and then you can see this is the ID of the event. That I'm viewing that we had just created so.

Mayte Eme 44:25 OK, but why does it look like? I mean, are we supposed to? Sorry, I just want to make sure levels are here. Are we looking at careers? Because this is Hard Rock Life and we cannot use this for Hard Rock Life.

Daniela Tea 44:35 This is the way that the event details page looks.

Mayte Eme 44:40 How?

Daniela Tea 44:45 So I am just going to create a new event detail page so we can see it from scratch. So I clicked on page and I'm going to select event page.

This is the template I'm going to hit next. And we're going to create a KT test page. Actually, I want to make sure this is meant. Yeah. Event page. Yeah, so this is just essentially the same page I'm going to be creating here, but you can see what it looks like from scratch. So you'll see here on this particular page what gets added is this event detail component. Yes, because I am in the career section of this, I can copy this page and I can put it anywhere else. And what might change a little bit is like the color of say like the header or something. But this like I we can do that right now. Let's go ahead and do that right now.

Mayte Eme 45:31 But it says careers. And.

Daniela Tea 45:48 I'm just gonna go to, let's go, let me go somewhere else. I'm going to create another page and say this.

Mayte Eme 45:58 Let me let me ask again, are we supposed to use this for all our sites for events or is this just a work around for career events?

Daniela Tea 46:08 No, this is what's being used currently for all the events. So if we if we look at say this Amsterdam event calendar. Oh, sorry, there's no events. Let me see. I think Valley has events that are active. Hello. So if we look at this.

Mayte Eme 46:37 So another question then, if you can drop this into a page, we don't have to drop this. I might as well just have an RTE and have something that. Works. Um. OK, let's just I'll just write the questions because I'm going to take too long trying to figure out this.

Daniela Tea 47:03 Yeah. Let's see here. So this is actually while we're here, while we're looking at Valley, this is just an example. Let's take a look at this configuration. So as mentioned before, you can see the content fragment folder path is only going to pull in content fragments from whatever we selected here. In this case we have pointed to the EN folder of Valley under cafes and we've also set the event page base path, which is what I was creating in the previous tab. Essentially this means that the event details will be loading within this page that has been created. I'm going to hit cancel really quickly though, so you can see here in this case there's only one region, Asia Pacific, there's only one location Valley because I have. Pointed everything, every content fragment within the content fragment path I had selected has value associated with it. OK. And then taking a look at the event page for here, this is how the event details page looks with this specific event. You can see the information is pretty similar to what we we had here, just you know, additional text and such. But this is an example of the event pages being used with cafes as well. Alright, I'm going to close out of some of this. Um, some of these tabs, yeah.

Lisa Cardia 48:35 Question on the the event detail page I believe it is. I'm trying to see where I had my note. My question is the URLs that you pointed out. So a lot of our events end up needing like a clean URL so that they're shared for.

Daniela Tea 48:41 Yes, yes. Mhm.

Lisa Cardia 48:55 Like promotional purposes, so advertisements, radio. So it'll be very clear to say property.com slash Kid Rock slash what have you. Will that work instead of like numbers 1234.

Daniela Tea 49:08 Hey. I see. So, um, one second. Yeah. So in terms of your, it sounds like you're talking about like a like some sort of vanity URL. Does that sound accurate?

Mayte Eme 49:22 No, no, no, not vanity. Right now in all our sites when we create an event and we have a detail page, the detail page has the name of the artist of the show, whatever the contract tells us to put. So these numbers, that's what this is asking. This is just.

Daniela Tea 49:28 Hmm.

Mayte Eme 49:39 I don't know. In the works or a bug, we're gonna have real names, right?

Daniela Tea 49:43 No. So this is where I was saying right now the event ID it gets auto generated. This is to prevent. This was previously added to prevent duplicates. It sounds like what is needed is as a enhancement to this. Being having the ability to change it, so making this not read only and then being able to change the ID so it's something that's a little bit more user-friendly.

Mayte Eme 50:09 I don't. I don't think we expect content authors to be changing. Can you just pick up the name of the page that we're creating, like WordPress or site coders?

Daniela Tea 50:23 So so when you say creating the page, keep in mind this is one individual page I have created. This page is going to be used for every event based off of the ID. So what I so I'd say like let's say this is.

Mayte Eme 50:32 But.

Daniela Tea 50:38 The event, right? So in the future what I'm saying is this is something that I could see happening where the event ID instead of being the numbers, you would want it to be say like the name of the event. Is that correct?

Mayte Eme 50:52 Yes, but not that way. I think we need to identify it as a gap because the way this is working, it's very labor intensive and not you know with a smart CMS that can you just create event and it just populates everywhere that we have it now. Um. So let's just add it to the list for when we launch any other side and careers. We'll figure out what to do with careers because that this digital page is not working for careers for the events.

Daniela Tea 51:25 OK, uh.

Edwin Aquino 51:27 Question, Daniela, with these event detail pages, the homepage hero that we have there, is that a standard hero across all of the event details pages or is that something we can customize per page?

Daniela Tea 51:28 Yes. What? Let me confirm. We're talking about this portion right here. Yes. So if I were to go back to, sorry, I lost the page. If I were to go back to this event detail page in the author, I'm gonna do that right now.

Edwin Aquino 51:41 Correct, yes.

Daniela Tea 51:54 Sure, OK. Uh, So what I had done here is I can set. In the event detail page I can set a default hero banner, but I can also override it with that banner image and alt text field here within the content fragment. So an yeah, so an example of that.

Edwin Aquino 52:15 Perfect. OK.

Daniela Tea 52:18 And sorry guys, we're jumping around. I'm just trying to find my tabs. An example of that. Let me take a look. I think this one I set something differently. No, was it this one? One of these? One of these I set differently. But basically as long as you put, yeah, this one you can see I set differently. If you put something within the content fragment, it will override it. If you leave it blank, it will just inherit essentially whatever you had put in the event detail page when you set up this page. Does that does that answer the question?

Edwin Aquino 52:47 Yeah, that answers it. Thank you.

Daniela Tea 52:49 OK, perfect. Yeah, so let's actually take a look at this component. I'm going to go back to the empty page I had just created, which is right here. So by default what you'll see is the event page title. We have a pre-populated text of Hard Rock live event counter that can certainly be changed. Changed and configured the description, title, event details, the default hero banner image which can be selected based off whatever you want to show for anything that doesn't have a banner and then an error message if say there's no events or something happens and you can put an error message here to be displayed. So this is what is here the moment you create the page and then of course the author can change out as needed. But the process of this is that you create one event page and then the as of right now what happens

is that the content fragment details will populate this page. By passing in the specific ID. And then I'm filling in the rest of the information on the page. I will pause here to see if there's any questions about this event detail component which is being used on the event page template.

Mayte Eme 54:11 I got so many questions. I'll I'll put them in confluence. I'll I'll try to regroup, probably rewatch this and make sure I don't bombard you with too many questions. I know it is what it is. So just let us digest this and if we even, you know, need to use this or come up with.

Daniela Tea 54:26 Yeah, understood.

Mayte Eme 54:30 Something else, because it's just, you know, not what we need.

Daniela Tea 54:35 All right, so now what I'm going to do is I want to actually show. You can see here this has a couple of other things filled out that we did not see previously on my other details page, and that's because I filled out more fields on this specific content fragment. So I'm actually going to pull up this content fragment. So we can see what was filled out for those to appear. So this one, Saint Patrick's Day. So you'll notice again, just to highlight, I had put this in 03 because as I was testing I wanted this to be Saint Patrick's Day, which is obviously not in February. However, I changed the date. In the content fragment itself, the way that the calendar works is it's going to be basing it off of what you put in the start date. So again, no bearing off the folder structure. This was just for ease of authoring use for organization.

Mayte Eme 55:32 I quick question, I don't see time zone. So is is that a site setting or we still don't have that?

Daniela Tea 55:32 OK, I'm going to, yes. So time zone wise, I was discussing this with our TA this morning and let me check my notes. You do not set a time zone here. This is based off of the user time. So viewed on the browser February 20th, 3:00, that's.

Mayte Eme 55:56 Mhm. Wait based on the user.

Daniela Tea 56:01 I'm sorry, what was that?

Mayte Eme 56:04 Based on the the the event time is based on the property, not the user.

Daniela Tea 56:09 No, as in this visibility is determined based off of the user's time zone. As in if I see this like because this there's no time zone associated with this February 20th, 2026, 3:00 PM for Eastern Time. Is obviously different from say like India or California and it's visible based off of the local time is my understanding.

Mayte Eme 56:33 No, that's not what we have to do by country. We have to put the time zone of the location. So if I'm in China, I still see 8:00 PM Eastern Time because the event is in Miami.

Daniela Tea 56:34 Yeah. Yeah, so let's get that into our Confluence page. I will talk to our TA to get a get something that's document on there to hopefully be able to explain a little bit better with some examples. So we'll note that one for something for follow up within our Confluence page. OK.

Lisa Cardia 57:08 I think the only thing that unless I'm sorry when I was taking notes, missed it was the tags again. It's something that we kind of always skim over that that's just for internal purposes and for like Don's organization. Not the categories tags.

Daniela Tea 57:23 So like, oh, oh, sorry, the tag you're talking about like right here. Yeah, these tags are not. Yeah, these tags are not, um, uh, being used within the calendars. And like, like you're saying, Lisa, you could certainly add tags for organization purposes, but.

Lisa Cardia 57:28 Yeah.

Daniela Tea 57:40 The calendar is not dependent on the tags that are added.

Lisa Cardia 57:44 So tags are is like an internal use.

Daniela Tea 57:47 Correct. In this case, yes. The categories though, which are tags, as you know, are dependent on to fill up the filter. Yep.

Lisa Cardia 57:49 OK. Right. Confusing to say tags twice, but tags is typically internal category tags. It's meant for the filtering in the cards. Thank you.

Daniela Tea 58:02 That is correct. Yes. Yes. Yeah. OK. So let's take a look at this here. So some slight differences that you'll see here is this, for example, this sold out status. That is based off the offense status and I I again, Lisa, I understand what you're asked was here. In this case I have one selected for sold out and so it's being displayed. So this will not change out unless I were to change it again. We also see the event status message. This is sold out. That appears here.

Mayte Eme 58:36 Can we go over the statuses? Are those all manual or can we actually schedule the pre sale, the announcement, the rescheduled?

Daniela Tea 58:46 Yeah. So this was the discussion that we were having earlier. Currently it is going to be manual what you select, but the understanding that I heard which will be discussed and covered more in the gap is that it sounds like each one of these statuses needs to have a specific like time frame associated with it. So that we would change without an author having to.

Mayte Eme 58:50 Oh.

Daniela Tea 59:06 Manually come into the content fragment and republish.

Mayte Eme 59:09 Not all of them, because we don't know when it's sold out right until they tell us or cancelled or postponed. But it's more than that. I mean, they actually drive and hide different content. So is it doing that? I guess we just want to understand right now what it does. Like if I choose preset, does it hide the CTA? Does it change it? Does it add the description that we usually have or the code or is just a little flag on the corner?

Daniela Tea 59:37 So right now, if I were to click on a presale, let's save this and again, I'm going to republish to have those changes visible. I'm just republishing it and then I'm going to refresh my event detail page. You can see that the presale. Flag has changed, so that's what the event status does. Yeah, that's because because what I did was, you know, let me open that back up again. I didn't change out my event status message. So this is separate from whatever the event status is.

Mayte Eme 59:57 It is. So you have to do all the money. Okay.

Daniela Tea 1:00:18 See.

Lisa Cardia 1:00:19 I actually had a question just about what the process you just showed about like publishing to see those changes. So if we're a content author and we're making changes and we accidentally selected the wrong label or something and we needed to see it, we would have to make it published in order.

Daniela Tea 1:00:24 Yes. So let's so I've just, yeah.

Lisa Cardia 1:00:41 And then we needed to change before we go ahead and publish. We didn't push something wrong.

Daniela Tea 1:00:47 Yeah, no, understood. So yeah, let's let's demonstrate how that works currently. So you can see I've like updated the title. I changed this to cancel. I hit save. I did not hit publish. So viewing the view as published side, you can see how I've refreshed it and it hasn't reflected those changes. So I would not be able to see those changes until I actually published it.

Lisa Cardia 1:01:12 Even just internal to yourself.

Mayte Eme 1:01:15 So how do we preview to make sure it's looking right? Because there's so many manual steps we need to see it before we publish because we might publish the wrong thing.

Daniela Tea 1:01:28 Oh, so let's see here. So.

Mayte Eme 1:01:33 And not to mention, we probably have to like export it as a PDF to send it to somebody. If it's a big one, then it's approval because we still don't have the preview links, so we got to come up with a process to get approvals.

Daniela Tea 1:01:48 Uhuh. And I and I think in terms of because I believe that was a question that we saw and also I think we're also going to we answered it, but I think we also want to cover that during the gap analysis portion, the preview server and the preview links. But for this section right here currently the way it works is that.

Mayte Eme 1:02:01 Yeah.

Daniela Tea 1:02:09 You would not see the changes until you publish the content fragment. However, keep in mind I have not actually published the page.

Mayte Eme 1:02:22 But if we need to send something for approval and we need to send the whole page.

Daniela Tea 1:02:22 Right. So what I'm saying though is the so the previous server is something that's completely separate. That's something.

Mayte Eme 1:02:30 We. No, right, right, right. I'm just saying like we gotta come up with a process, right? So right now the process is doing a full page screenshot and send it in as a JPEG or a PDF. So how do we get that? If we have to publish and go live to see a full page and there's no internal review when I'm logged in into AM.

Lucas Nelson 1:02:55 Andy, are you aware of any export ability that that AEM has out-of-the-box just by chance?

Andy Lambert 1:03:03 For exporting.

Lucas Nelson 1:03:05 Like this page to a PDF, like the entire page, the the use cases they're trying to figure out a process while other things in the gap analysis will be in flight to be able to send these pages as previews to like vendor partners or.

Mayte Eme 1:03:09 Me.

Andy Lambert 1:03:17 Mhm.

Lucas Nelson 1:03:22 Whoever their other stakeholders are before they actually, uh, publish changes on a public site. Just curious if you've had that use case before with exporting.

Andy Lambert 1:03:28 Let me. No, not a specific ask for like a screenshot almost, but let me take a look and see what the latest and greatest is on cloud services and see if there's something that's available. We'll come back to you.

Mayte Eme 1:03:45 And to be to be fair, I mean we can just do plug in Chrome or whatever and screenshot the whole page, right? And it saves as a JPEG or a PDF. So not asking for an export feature, but a way to at least preview in the browser so we can do our screenshots.

Andy Lambert 1:03:54 Mhm.

Lucas Nelson 1:04:03 So a browser preview and and and.

Mayte Eme 1:04:05 No.

Andy Lambert 1:04:05 Wouldn't that be from using just view as published or using your preview tier? So you have in in cloud services you've got in addition to your dev QA stage prod. For each of those environments there is a preview tier that you guys I don't think are using right now.

Mayte Eme 1:04:11 Yes.

Andy Lambert 1:04:22 Um, that might serve that purpose where it's only visible to you.

Mayte Eme 1:04:22 Hmm.

Lucas Nelson 1:04:27 Yep, Andy, the problem. It's not configured yet.

Mayte Eme 1:04:29 OK, but is there a preview like what Danielle is showing right now? Let's say we wanted to send this page that she has right now. At least we can see the page. We can say ignore the toolbar on the top like something to see the page, but it seems like for the event detail pages that doesn't exist at all.

Andy Lambert 1:04:30 Um.

Daniela Tea 1:04:45 So sorry, let me you're asking, sorry, I'm trying to make sure I understand the question because I made changes here, right? And you're like, how do I get those changes to be seen here without having this go out to the public? So that way they aren't seeing a bunch of.

Mayte Eme 1:04:47 I Yes. Yes.

Daniela Tea 1:05:03 You know, junk. Um, So let me actually pull up this page in the publisher. Alright, one second.

Mayte Eme 1:05:06 Yeah. OK.

Daniela Tea 1:05:12 OK, one second. One second. Um. What is this called? QT Calendar, I think. OK, so right now we're reviewing this in the publisher and I'm going to click on more info to open up my details. Oops. Oh, I don't think I I don't think I I I didn't publish this, did I? One second. Yeah, so let me let me publish this version. And publish this version first. OK. Let's publish. Let me also double check to see what the event details are for this. So right now, uh, OK, it's cause I was, I was messing around. I was

messing around with that link. OK, I'm actually going to save this one and I'm going to publish this one. Alright, So what I was just doing was I was changing one of my destination links. I was. I put something else there as I was setting U this page. I didn't intend for that to happen. So now if I were to go back to our. Publisher link, which I'm going to pull up again. Last KT calendar. See here and let's go back. Let's look at the author version of this page as well to see what differences that there are. OK, so right now you'll see I didn't publish this page, I didn't publish KT calendar, and so I'm able to see this here, right?

Mayte Eme 1:06:59 OK.

Daniela Tea 1:07:02 I'm able to see more info. I did publish the content fragment, but I did not publish the page. Makes sense. Like that's why you're not seeing any of the changes I made where I removed the button or I added all you know this junk at the end of this title. So the.

Mayte Eme 1:07:03 OK. OK. But what are and can you do the same with the?

Daniela Tea 1:07:18 Yeah, go ahead.

Mayte Eme 1:07:22 Thing that detail page that looks like a card the.

Daniela Tea 1:07:26 Oh, so hang on, let's see. Let me confirm what you're asking. So as I clicked on more info, this is the detail page so I can see the changes that I made. You're asking for if you can see that here as well. I did change the destination link for this. One second, I'm actually going to open up this one.

Mayte Eme 1:07:31 So. Yeah, that one.

Daniela Tea 1:07:45 I don't think, oh, I never publish. Don't think I published my detail page from the publisher side. Mayte, one second. And sorry guys for jumping around. I'm just trying to find it in my section here. Did I ever publish this page? Yeah, so you can see.

Lisa Cardia 1:08:01 But this is helpful to know too. Do we have to publish all three, the fragment, the detail page and the event calendar every time a new event's added? This is just important for other authors that are going to be adding to their event calendars.

Daniela Tea 1:08:09 So. Yeah, so keep in mind that again, this event page is just one page, right? So you would only have to publish it once, but I never publish this. That's why none of these links here in my calendar on the publisher side are going to work because I never published the KT event page, right? O hoefully that makes sense. So now what I'm going to do instead is I'm going to publish my KT event page. On the publisher side, if I were to refresh this, let's see if that has gone through. So now you can see here the event detail page works and it's showing information, whereas previously it wasn't because that

page had never been published. But even when I refresh this and I go back to the author side, you can see there is there is differences. My taste question was if I were to view this here, let's see what it looks like. OK, so because I published the page and it probably published a content from again.

Mayte Eme 1:09:15 Mhm.

Daniela Tea 1:09:22 Let's do this exercise one more time. What I'm going to do is I'm going to make another edit to the content fragment. Um, just to see, uh, you know, like what's being displayed here. So one second. Let's go back to my St. Patrick's Day content fragment.

Mayte Eme 1:09:39 I am so gonna have to watch this again. There's so many steps.

Daniela Tea 1:09:42 Well, this the reason why is because I'd never published a page. That's why there are some inconsistencies. But one second. OK, so I hit save and I hit close and let me hit publish and let's see what happens. So I had published. So this should now say testing. Let's see what it says over here. It still does not reflect because I never republished the KT calendar page. If I were to refresh this, you can see here it does not show the new change of testing. Because I did. I I did not republish. Let's see. Hang on. I didn't. Wait, hang on. Yeah, so I republished the content fragment, but I did not republish the event page here.

Mayte Eme 1:10:33 To. So when we have the 100 of events, is that how long is it quick right? Because if we got to republish every time there's a new event or a change the whole page, does that cause any issues or delays or? And I'm sorry, but going through cycle, like cycle would give us a lot of issues, right? If we were published the whole event page, that's why I'm wondering.

Daniela Tea 1:10:53 So can you? Yeah. Yeah. Can you repeat the question please, Mayte?

Mayte Eme 1:11:02 Yeah, um, when you said you have to publish the event page right for it to show.

Daniela Tea 1:11:10 When I yeah, when I first created this, I had never published it. And so now this is published. So you can see it was published 3 minutes ago. OK, sorry, continue.

Mayte Eme 1:11:23 Yeah, so um. Maybe you just answered the question. So you don't have to publish that event page every time a new event is added. It was just that one time because you didn't publish it.

Daniela Tea 1:11:35 That is correct. Yes, I did not have. Yeah, yeah. So like now now if I were to look at these, like previously these links would not have worked. Well, the Google one would have worked, but these links would have worked because that KT event page had never been published. But now

if I were to open it, it should display the content.

Mayte Eme 1:11:36 OK, OK, OK, OK.

Daniela Tea 1:11:55 Because I published the page. Hopefully that makes sense. And again, Maishi, totally understand. If

you have some additional questions, we can certainly review them also in Confluence.

Mayte Eme 1:12:06 OK, yeah, yeah, that'd be good.

Lisa Cardia 1:12:07 So what do things always need to be published? The the fragment and what else?

Daniela Tea 1:12:10 So. Okay, So let's let's do this. I've created a calendar page. I can create a let's create a brand new

calendar page, a brand new event detail page, and then also just, you know, referencing some content fragments. OK, let's do that.

Lisa Cardia 1:12:31 OK, cause like likely the event calendars, my assumption are already pre-built for properties basically and they're just responsible for the new events. So if I'm that property and I'm creating the new event, I just want to make sure I'm publishing all of the right things that need to be included in the publishing. So that's.

Daniela Tea 1:12:36 Yes. Yeah, understood.

Lisa Cardia 1:12:49 The fragment.

Daniela Tea 1:12:51 OK, so if I were to make some changes, let me add a new content fragment very quickly with some bare minimum content. Uh, start date. Let's do March. Start time just random. Uh. Going to select my image. So this seems like typically what a content author would do. Correct me if I'm wrong, Lisa, they right now would be creating an event specifically for their property, right? So like this, this seems to be in line with like what a content author would typically do. So I thought on my image my description. And I'm not going to fill this out, but I will just add a location and I and in this case I'm just going to choose something here. OK, alright, so this is the bare minimum right now. And you can see here I've created this within the Ballyen folder just

like the other ones. So if I hit save. And I hit close. Right now we can examine that this particular content fragment has not been published. So the expectation is that when I view this calendar, I should not see it on here. So it was a March event. You can see March is not even available once I

published this particular content fragment. Just sorry. Click on this and then I am. Where is my publish button? Uh. Uh. It's this one right? Should be the there we go. OK, so previously you might have seen that the the ribbon here didn't have my specific tool quick published, but after I refreshed it and yes it did pop up. So if that just something to keep note as a content, I'm sorry as a. As an author, depending on how fast you do

things, sometimes it might not appear like right away, but if you refresh the page you will see it. So I'm going to hit quick publish. Publishing that. So now this is a published content fragment. We can say I published it a few seconds ago. If I refresh this page here in author, the expectation is that you will see it appear here now. So I click March 2026 and you can see that specific fragment is here.

Lisa Cardia 1:16:06 OK.

Daniela Tea 1:16:07 Now let's go to the same page that was in the publisher's server. So this is my KT calendar. Let's click refresh on here. So you'll see that there is no March 2026 event that appeared here. Right. If I publish the calendar page, right? So I'm going to republish this calendar page. So I've hit publish. There's been published. Um, let me see. OK, so I've hit publish and you'll see my Saint Patrick's Day testing thing came in and also let's see what else. All right, second this and this I think is what Gonzalo was referring to in terms of how quickly will we be able to see the changes and so this is something certainly that we would want to. Confirm. But as we will continue to check this page, the expectation is that after you publish this page here you the event calendar page, you should be able to see the same changes like the way that it's that you're interacting with it here where you see that the filter had been updated and that new test.

Lisa Cardia 1:17:15 Which is the event calendar.

Daniela Tea 1:17:27 I created is here after publishing that that should be available then on the site, but I think it could potentially be a couple minutes and as Gonzalo mentioned, this is something we certainly want to monitor, but that is the expected behavior, Lisa. So what I had outlined was.

Lisa Cardia 1:17:34 OK.

Daniela Tea 1:17:46 Pushing that content fragment and then I also published that calendar page.

Mayte Eme 1:17:51 Yeah.

Lucas Nelson 1:17:52 Daniella, can you drop the link that you have the page you published and it it. Yeah. And then we we can take that in the background for Andy and Vinay. Thank you. Yeah.

Daniela Tea 1:17:54 Oh. Oh, yes. Sure. Yeah. No, thank you. Yeah, that's cool. Yes.

Lisa Cardia 1:18:03 And then Daniela, two questions. One's going to be related to careers and one is going to be related to events in general. We we announce events sometimes and then get notified from the property. Take it down, take it down. Artist changed announcement to Friday.

Daniela Tea 1:18:12 Sure.

Lisa Cardia 1:18:19 So what does that look like to unpublish but not delete? Because we will use that content fragment, just unpublish and then repurpose it for the time that's necessary.

Daniela Tea 1:18:20 Mhm.

Mayte Eme 1:18:33 Yeah, kind kind of like hiding the the card and the detail page so nobody gets to it.

Daniela Tea 1:18:33 So. OK, so let me make sure I understand. Let's take this for example. Let's pretend Saint Patrick's Day has been canceled and we don't want it to be displayed.

Lisa Cardia 1:18:46 Mhm.

Mayte Eme 1:18:46 Not, not canceled. We just got told to pull it down for a few days.

Lisa Cardia 1:18:51 And we'll announce it later in the week, yeah.

Daniela Tea 1:18:53 OK, so the question is how do I get like what do I what would I do in order for this to not be live on the site? Is that correct?

Mayte Eme 1:19:01 Correct.

Daniela Tea 1:19:02 OK.

Lisa Cardia 1:19:02 But without deleting it, because we will put it back up Friday.

Mayte Eme 1:19:06 Yes.

Daniela Tea 1:19:07 OK, alright, so let's go ahead and unpublish Saint Patrick's Day. So this is saying OK are you what do you want to unpublish? OK, I want to unpublish my event. I don't have to select this, but some in some instances. The reason I'm just highlighting this is that you will see additional references where you get to pick and choose what you want to be updated and so just want to make sure that you guys are aware that in this case there's only one so it doesn't matter as much, but that's why this is a multi select. Then I hit unpublish. So it's referenced by three items. Yep, got it. So I have hit continue and So what that should do. Let's see because we're still waiting for this to. Um, operate, I think. Yeah, so you can see here in this instance, right? That event has been removed from the calendar and like you can't see an author because I unpublished it. Does that make sense?

Mayte Eme 1:20:11 What about the? Yeah, what about the detail page? Is that a published too?

Daniela Tea 1:20:16 So the detail page, I guess what you guys are saying is that in this case here like the URL, I'm gonna take it from the publisher. You're asking if like this here like would this still be something that they can access if they have like the specific?

Mayte Eme 1:20:26 Yeah. Yes, when we pull it down, we'll pull it out from everywhere.

Daniela Tea 1:20:37 I see. Um, let's see here. Oh man, I don't have the ID for it. I I would need to check the ID, but we can chest. Let's I what I'll be doing is, yeah.

Lisa Cardia 1:20:47 I just want to make sure that the same pages that we're publishing, do they need to? Do we need to take precaution on extra steps to unpublish something so that we don't miss everywhere that it it got associated to?

Daniela Tea 1:21:00 Yeah, no, I understand. With regards though to that event detail page, again keep in mind because it is only one page, you would not be unpublishing that specifically for the event. However, what I do want to check once we can see the changes here on the live site, I'm sorry on the stage website is. If I can still access the previous URL that was stored here, like since it's removed from here, I I understand that a user if they still had it stored as like a favorite or something, we want to check to see if that's accessible, but they would not access it from the event calendar because it would not be visible in the event calendar.

Lisa Cardia 1:21:39 Upon a media unpublished of the fragment.

Daniela Tea 1:21:41 Right. So what's we've we've taken this page so we're going to be investigating this one and that's also going to be something that I'll be testing. I have the URL currently for this with the ID once this because we unpublish this. Once this is unpublished and visible as unpublished on this page, we'll also be accessing. the specific link here to see if it's going to pull up a 404 or if it still displays the details. So that's something that we will have to take offline, but I can also report back tomorrow once we get that looked at. Hi.

Lucas Nelson 1:22:18 Sounds good, Danielle. Yeah, we're sleuth in the publishing queue Part 2, so we might have follow up on that tomorrow.

Daniela Tea 1:22:23 Yeah. Yes, I believe we will. Yeah. Um, OK.

Mayte Eme 1:22:29 So just to recap maybe for for a second to understand how these events that you have built worked, we can unpublish them and you're going to confirm the detail page. We can publish them on a specific date and time, but it's not local to the property. And they will drop off on the I I think I saw an end date right on time. So they will automatically drop off without any action from our part and all the event statuses are manual.

Daniela Tea 1:23:02 Oh.

Mayte Eme 1:23:02 We cannot override dates, we cannot override location because we usually don't put the address, we put the actual venue, whether it's a career event or whatever event we.

Daniela Tea 1:23:15 Mhm.

Mayte Eme 1:23:18 Cannot do a status as a scheduling. What else am I missing? Lisa, we have to do it like in three times instead of one. Like in Cyncord we and that's pretty much right all the capabilities.

Daniela Tea 1:23:32 So.

Lisa Cardia 1:23:32 Uh yeah, I probably have other notes on my end that I could add to the list.

Daniela Tea 1:23:37 Yeah, yeah. So one thing I did want to want to point out, let's see here. And I know that this is, I just want to be clear that the hiring events that are listed here, we are not currently using. I think like this is like what you're what you're talking about, right, Maite? So you'll see here, yeah.

Lisa Cardia 1:24:02 Well, so if these are, what are these using if they're not using the events?

Daniela Tea 1:24:06 Sorry, no, no, they so sorry. Apologies. I what I meant to say is they are using the events content fragment. Wait, hold on. Where did it go? One second.

Mayte Eme 1:24:08 And I.

Daniela Tea 1:24:21 One second. OK, here we go. All right, let's take a look at this very quickly and I can see the time. So I I know that we also want to cover.

Gonzalo Calasich (SHRSS)** 1:24:28 Those are the promotion Uh content fragment model.

Daniela Tea 1:24:31 Yeah, that's what I wanted to point out that this is, this is what I believe Mayte is expecting. Is that correct?

Mayte Eme 1:24:38 Yeah, but Amazon.

Daniela Tea 1:24:39 In terms of the over, in terms of the overriding, like that's what you were describing.

Mayte Eme 1:24:44 Yeah, we can do that for any of our cards.

Daniela Tea 1:24:48 Right. So here we have and I believe, yeah, I know Gonzalez, I think you you had made some edits and such, but let's just pull up one of these. So yeah, this is a a different content fragment model. This is using the promotions content fragment model. The reason why we chose to use the

promotion. Content fragment model was because we saw the examples where this was something that was overwritten. That's and that feature and capability is here with date override text and location override text.

Lucas Nelson 1:25:13 Mhm.

Mayte Eme 1:25:14 OK. But we need that for. So in the event ones we don't have that and we also don't have venues. I'm just trying to understand if we can actually use that. Um.

Daniela Tea 1:25:31 We don't. So.

Mayte Eme 1:25:45 Oh. Sorry, my connection was weird, but is there a way we how do we understand exactly what these cards can do?

Daniela Tea 1:25:54 So keep in mind what we went over today is specifically for the events content fragment model using the event calendar component and the event details component. What we're seeing here, I I the reason why I was calling this out is because yes, I know this is hiring events. In order for us to make these cards, we use the promotions.

Mayte Eme 1:25:55 To.

Daniela Tea 1:26:14 Content fragment model since that seemed to be more in line with the fields that were listed here versus using the event content fragment model. Does that make sense?

Mayte Eme 1:26:25 Yeah, it makes sense. But I mean, it's still lacking, you know, functionality and we we have to address that in in in the gap assessment that we're going to do. But I was asking more about the events, right? What is it that we can and cannot do to see if we can even use them?

Daniela Tea 1:26:30 Mhm. Yes. Um.

Lucas Nelson 1:26:45 Danielle, is there anything else on events that you haven't covered to show what we have currently implemented?

Mayte Eme 1:26:47 Is.

Daniela Tea 1:26:52 Um.

Lisa Cardia 1:26:53 Also, to be clear, so we're not using events on careers. Sorry, I was just confused because I thought today was careers focused.

Mayte Eme 1:27:00 Yeah.

Daniela Tea 1:27:01 No, no. So today was events focused and we wanted to cover everything related to events. I wanted to call this out though, because this is actually using a completely different content fragment model. I know the title says hiring events, but this is not using the event content fragment model that's using promotions.

Mayte Eme 1:27:05 Um. OK, so oh, I thought we were continuing with careers because they were. OK. So we'll just Add all the other questions from careers so we can wrap that up. And if today was about events, so much so, OK, we'll just write down our questions.

Lucas Nelson 1:27:44 We tried to flash the agenda yesterday. I don't, you know, I'm sure there's a you're taking it from a fire hose, everybody. But yeah, we we we flashed it. We were gonna review events.

Mayte Eme 1:27:51 Yeah.

Lucas Nelson 1:27:56 So yeah, my take, you know, if there's more questions on careers, uh, we, we, we, we wanna make sure they're captured, yeah.

Daniela Tea 1:27:59 I.

Mayte Eme 1:28:01 Yeah.

Daniela Tea 1:28:01 So actually, Luke, this actually rolls in quite nicely because I think, you know, yesterday we were kind of doing a retrospective. And So what I'm hearing from the team is definitely understand the desire to actually go over more things that are related to careers. Previously, when we had planned out how these sessions would go and examine what topics were being tracked within JIRA, we were trying to group things into essentially like, you know, big overview topics like everything events related. I mean the content fragment and the related components.

Mayte Eme 1:28:18 Mhm.

Daniela Tea 1:28:35 However, definitely understand that it sounds like careers is the desired focus, so we can potentially pivot tomorrow to look at some additional careers specific components. I believe one of the questions was like for example the video testimonials. And the fact that here we're using the promotions template, how does that work in relation to this hiring events section? So what I'm saying is I can write up a modified agenda to go over some of those different topics. We can go so it's more career focused versus. Some of the things we had initially planned, if that sounds good with everyone.

Lucas Nelson 1:29:13 Hey, hey, once. Yeah, one second. Daniela, can you pull up the confluence with the agendas that we sent out last week?

Mayte Eme 1:29:14 Yes, but it's big.

Daniela Tea 1:29:19 Mhm. Yes, one second. Here we go. Yeah, OK.

Lucas Nelson 1:29:28 And I'm not, I'm not pushing back. I'm just, I just want to make sure I'm I have an understanding. So you were initially going to do news tomorrow and then locations, but we're talking about pulling in. Tell me again what you're pulling up forward.

Daniela Tea 1:29:42 Taking a look at the careers website and identifying any additional components like that we had planned for outside of these sessions, we were trying to cover the content fragment related components first since this do take a while. So to be clear then there will be a different agenda.

Lucas Nelson 1:29:56 Right. Yeah.

Daniela Tea 1:30:02 I'll try to get that prepared after this call and it will be covering some of the items that we can find on the careers website.

Mayte Eme 1:30:11 Oh, question. When you say careers, job sessions one and two, we assume that's yesterday and today, session one and two. So if we are doing session three instead of two, can you just let us know when we're changing that? Because our mindset was on our careers, so we're looking at events. Trying to figure out how on earth we use this for career events, and it turns out it was for everything else, not careers that is used in promotionals.

Lucas Nelson 1:30:36 Yeah. My my it was tough to norm on the number of session topics to blocks of time because they're two hour blocks of time. So So what what our intention was when when we list out the four bullet points because we're having four blocks of time, we were covering 2 session topics per block.

Mayte Eme 1:30:44 Mhm. OK, that's no problem.

Lucas Nelson 1:30:58 So yesterday we did jobs one and two, today we did events two and or three and four and and so on and so forth. So that that that's the intention that that there there's going to be two hour blocks of time and we were able to try to scope and plan. The the I don't know Danielle was at 42 session topics into those those planned sessions blocks of time. So I just want to be clear on that if we were I know that norming is is a little wonky but that that was the best we could do given the two block 2 hour blocks of time that we.

Mayte Eme 1:31:22 OK.

Lucas Nelson 1:31:30 Had already aligned with Scott that you guys had, you know, were committing to be available. So just Danielle, did I explain that right?

Mayte Eme 1:31:35 OK. No, thank you for explaining, Luke. That helps. Good to know because we didn't know. So, but we are not done with careers. So if you tell us, hey, go manage that site, we can't. So we'll add the rest of questions we were holding on thinking today was session two.

Daniela Tea 1:31:37 Yeah, I think so.

Mayte Eme 1:31:55 Add them to Confluence and we need to revisit that because that's the site that we got to go live right due to the Workday crazy timeline. So we got to be prepared to support that. We already have issues with Hard Rock and Reverb. We don't want to add more to with careers.

Lucas Nelson 1:31:58 Yeah, I. Yeah. So Maite, I, you know, hear you, but but here here I I just want to make sure it's clear the careers site, we're cross-pollinating topics of there's a careers work stream and I'm giving it to you from the Adobe point of view. There there's a careers work stream, there's a knowledge transfer work stream.

Mayte Eme 1:32:26 Mhm.

Lucas Nelson 1:32:30 This focus that we have right now with these knowledge transfer sessions is knowledge transfer across the the components and and the master topic list that we had. We pulled those master topic lists that they were kind of agnostic to whatever careers work stream that you guys had. Committed to and and that now the onshore team and Adobe are pulled in and are supporting start starting to get into the game supporting the careers work stream. But I to I, you know I say it a lot just want to be clear like this is knowledge transfer across. Those master topic list and what we've implemented in in your instance of a EM, we are pivoting and trying to accommodate with with the knowledge transfer schedule, you know careers focused components from from the framework.

Mayte Eme 1:33:24 Mhm.

Lucas Nelson 1:33:25 So hear you loud and clear there. I'm not disagreeing with you that it's it's of importance, but we still have to be mindful and specifically me and Scott that we're sticking to the plan and not falling behind and and and not, you know, finding that we need more sessions than what we had scope and planned for.

Mayte Eme 1:33:30 Hmm.

Lucas Nelson 1:33:44 On the schedule for knowledge transfer. So yeah, so we're doing a best effort to to support that mighty.

Mayte Eme 1:33:47 So it's called maybe. Right. And I appreciate that. Look, I do, I do. It's just that clock is ticking. So can you guys maybe figure it out how we look at the components used in careers first instead of going through events that we are not using?

Lucas Nelson 1:34:02 That's what Daniella was just saying to you, yeah. Yeah, that's what Daniella was just saying to you. Yeah. So we what what we're doing is reacting to that, that ask and and understanding the careers timeline that we're under and Danielle is going to try to make a modified agenda is what she just said, yeah.

Mayte Eme 1:34:12 Mhm. Okay, thank you for that.

Lucas Nelson 1:34:22 Yeah, no problem. Danielle, did I did I over commit you for something or is that good?

Daniela Tea 1:34:23 Oh. No, that that's exactly what I said. But sorry, I just wanted to make sure before before we got into more retrospective that I was checking the stage site again. This is that page that we're looking at. You can see that the unpublished content fragment, that Saint Patrick's when it's no longer visible on the live site. And then also that new content for everybody created March 2026. You can see it's also visible on the site here. I didn't republish the details page or anything like that, but just want to make sure that the team was clear that you can see it now on the staging website. OK. Um, so going, yeah.

Lucas Nelson 1:35:06 That being said, Andy, it should be worth noting on the call that that we are investigating the delays on stage. Yeah, Andy, I think it's worth calling out so people know that we're we're trying to be proactive there, yeah.

Lyon, Rick (Director of Digital Experience)** 1:35:17 Yep.

Andy Lambert 1:35:20 Yep. So as you guys were doing the the KT session here and it sounded like there might be something up behind the scenes. So I went into cloud services and I see some some failed public well that's related to publication, some some entries in the log. So looking into that and. Raise a support ticket and we'll keep you guys posted.

Lucas Nelson 1:35:44 Yes. So Gonzalo, hope you heard that. And I saw your hand was up earlier. Gonzalo, I'm sorry if I bogarded the mic. Did you have anything else, Gonzalo?

Gonzalo Calasich (SHRSS)** 1:35:53 Yeah, this is to Daniela. Were you going through the hiring event component or that's going to be something for the for the next session? Because I have a question about that one specifically.

Daniela Tea 1:36:04 That was gonna be tomorrow for the new modified agenda, Gonzalo.

Gonzalo Calasich (SHRSS)** 1:36:09 OK, we'll have it for tomorrow. No problem. Thank you.

Daniela Tea 1:36:11 Yeah, no, thank you. And and please let me know what your questions are tomorrow for sure. And Mayte, I know we had also said I had saved the URL for that specific one that had been unpublished. And so just showing you this is what would happen if a user went to it. This particular message here to be clear is something that's configured on the.

Gonzalo Calasich (SHRSS)** 1:36:16 Yep.

Daniela Tea 1:36:30 So if I were to take a look at it and the author, you can see I had my error message. There are no events. So obviously if you want it to just say this event no longer exists or something that could be something that can be configured, but when you unpublish the content fragment. And sorry, when you unpublish the content fragment, that specific event detail URL is also not available to the end user.

Mayte Eme 1:36:54 OK, it's good to know how it works. I'll add it as another gap. That's not the functionality we're expecting, but at least the user doesn't get to see it. So that's one plus.

Daniela Tea 1:37:07 Hi.

Lyon, Rick (Director of Digital Experience)** 1:37:07 Would we still be able to have a preview link to that, Danielle?

Daniela Tea 1:37:10 But we still be able to have a preview link. Um, if it's.

Mayte Eme 1:37:13 Nora.

Lyon, Rick (Director of Digital Experience)** 1:37:14 Like we had to make updates to the page after we unpublished. We need to share that out to get approval before we published again.

Mayte Eme 1:37:20 That's a good question. So not a preview link as in the ones that we are identified as a gap, but if we log into AM, can we work on the page and see it within AM as a logged in user?

Daniela Tea 1:37:22 Sorry, I'm I'm. Uh. Uh. Yeah, so keep in mind again, it's one page. Everything's coming in from the details here. If you publish the content fragment, it doesn't automatically become visible to the end user. You would have to essentially republish the. The calendar page. So when you guys are saying the event detail page, it's just again, it's one page. Like this is just one page. K team. Oh oh, I'm so sorry. One second.

Mayte Eme 1:37:58 Oh, wait, you're not sharing. So an unpublished page. You can still go to the detail page and see it in AM and screenshot it to get approvals.

Daniela Tea 1:38:14 So if I were to on this, uh, not this one. One of my content fragments was previously unpublished. I can't find it, but. We had unpublished the. Saint Patrick's Day one. This one is unpublished and you can see it's unpublished. And your question is, would you still be able to see that in a EM? So if I were.

Lyon, Rick (Director of Digital Experience)** 1:38:43 Yeah, can you send me a link to that? Can you post a link to that in chat, the unpublished page?

Daniela Tea 1:38:46 I see. So if I were to, so you would not see, you would not see the content fragment within the calendar, nor would you see the event detail page if it's unpublished. If we were to publish the content fragment, it would be visible.

Lyon, Rick (Director of Digital Experience)** 1:38:51 Or unpublished details, whatever. OK.

Daniela Tea 1:39:05 In the calendar as well as the link to be able to see the details. However, until I publish this link here, this will not be visible to the end user. But Rick, for your specific question about the details page, if I just publish this, let me do that right after this call and then I can report. Back on on that specific behavior for what you you just mentioned. OK, yeah.

Lyon, Rick (Director of Digital Experience)** 1:39:26 OK. OK, good. Thank you. I just want to make sure that with content fragments because they are kind of, you know, data elements that's pulled into a template page to to render that we have the ability to preview that before it's built or somehow built but not published, that kind of thing.

Daniela Tea 1:39:35 Mhm. Yes. Yeah, no, understood the need for that. Sure. Yep, I will write back on the Confluence page then. Yep, thank you guys. So I'll stop sharing and I think we've agreed then for tomorrow's session, we're going to take a look at some additional components that are specific to the careers website, one of the things that.

Lyon, Rick (Director of Digital Experience)** 1:39:50 Perfect. Thank you.

Daniela Tea 1:40:07 I we can certainly cover is the how hiring events has been modeled by using promotions. I believe we also had the video testimonials which are on a couple of pages and I'm actually going to do a look. After this call to kind of, you know, take see what else is out there and I'll be posting the new Confluence page prior to tomorrow's call, which will detail out the other components I'll be covering.

Lyon, Rick (Director of Digital Experience)** 1:40:31 Hey.

Lucas Nelson 1:40:34 Daniella, it it. Does this mean we're? Pulling topics forward, so to speak.

Daniela Tea 1:40:42 Yeah, that's correct, Luke. Yeah, that's right.

Lucas Nelson 1:40:46 OK, we're not adding a session, we're pulling stuff forward.

Daniela Tea 1:40:47 So no, no. What we'll be doing, Yeah, what I'll be doing is like my previous confluence pages where I have like the list of JIRA tickets that the other reference. I'll be pulling those into my confluence page as well for whatever's being covered.

Lucas Nelson 1:41:01 Yes, yes. This is actually really good. This is good 'cause it it's it's prioritizing careers like Maite's ***. So OK, OK.

Daniela Tea 1:41:15 Yeah, yeah, absolutely. So yeah, if you guys can just give me a little bit of time to get that out, we will certainly send it over though once it's once it's ready to go.

Lucas Nelson 1:41:16 So, OK, OK. OK, 15 minutes left. Any any questions or feedback from today's session, you know, let let let me know. I want to hear it. Anybody on the call?

Mayte Eme 1:41:39 I'm still confused on how to use events, honestly. Um. Seems to have a lot of manual like check, check, checks and and added in multiple places instead of how easy we have it now that we just do it once and it populates wherever it has to.

Lucas Nelson 1:41:45 Yeah. Yeah, we we definitely want you to understand or as best as you can might take the the baseline of of what we've implemented and yeah ultimately with with the with the gap list and and getting the you know the changes made to the platform on the road map. We want to get it right for you. So you know, encourage you to go back to the recording because I know Daniella, no fault to her, but you know, some of it goes pretty fast. There's a lot of information and we'll look forward to seeing your your, your feedback and and questions and confluence, OK.

Daniela Tea 1:42:20 Yeah.

Mayte Eme 1:42:33 Yeah.

Lucas Nelson 1:42:36 What? What else, guys?

Mayte Eme 1:42:37 And one question I did forget to ask is because we were talking about events, events and just on that page and it had those filters on the top for locations. But I assume we can choose or I might be wrong that we can choose what location show and display it on any website, right? Like if I'm in the. It's a Seminole gaming website that has six properties. I can only show events for these six properties. If I'm in, I don't know, a campaign

that has three properties or only hotel and casinos, I can pick events from those so I can. Set my criteria to show to display whatever events I need from these venues or that venue. So from this month like mix and match criteria or is that not possible with AM?

Daniela Tea 1:43:24 So right now the the way that the event calendar has been set up is it points to one specific content fragment folder path. If I'm understanding what you're saying, like you can certainly select like the line of business folder so it would show like safe like casinos. It could show all casinos, but it sounds like what you're asking. Asking for is say you don't want to show all casinos, but you want to show a subset of casinos. Is that correct?

Mayte Eme 1:43:48 Yeah, and it could be, you know, hotel and casinos. It could be just the Seminole staff, which are casinos likely, but it could be also just based on location, who it could be a mix and match of different line of businesses. It could be any big event anywhere, which is what we do in entertainment.

Daniela Tea 1:44:01 OK.

Mayte Eme 1:44:05 We have venues across including Harbor Cafe Venue in Orlando. So that's a cafe. Then you have from hotels like New York and then casinos and casino hotels.

Daniela Tea 1:44:15 OK, yeah, so with the way that it works today is because you're choosing a specific folder path, you can choose like a something in higher up in the hierarchy. However, you are not able to select specific folders from within there. To show multiple folders or build a calendar based off of multiple folders that is not currently in our system.

Mayte Eme 1:44:40 OK. OK, sorry, I was just thinking how to how to do that, but OK, that's a big gap for any casino, hotel, cafe, entertainment and all the websites that are left. Can I pull events into somewhere else, something else than that event page? Or are they logged to a specific template? Like we show events in carousels across, you know, all the pages you might be in a restaurant and we might feature events.

Daniela Tea 1:45:19 When you say pull events to other pages, you're saying outside of the calendar. So would you like for example, like say you might want to show just a specific event? Is that what you're asking Mayte?

Mayte Eme 1:45:24 Yes. 6. Yeah, we can go. It could be a venue, right? I could be in a venue page, a small venue, like, I don't know, council log, right? And I want to show the events for playing at the council log venue. Or I could be in the homepage and show just a coming events from X. Category. I could be in the. I don't know. I I might want a show just

to give you a use case, right? The ones that have dinner and a show, right? So pull all those.

Daniela Tea 1:45:52 Mhm. OK, so there is the ability because keep in mind these are content fragments. We do have some other components outside of the event calendar component which was strictly made again just to display event. Uh, Events. Uh uh. Event components. I'm going to share my screen really quickly and I don't think this necessarily addresses exactly what you're saying, but I'm trying to make sure I understand. So right now I'm showing a component called the Contact Fabric card list. You can see I can display a list of either news or events. There are some other things I need to configure to display this, but because it's a content fragment, I'm able to display things outside of that that calendar component, so you're not locked into using that, but for your use case. You're saying like for example, if I want to select a fixed list of specific calendar events, you could do that through here by choosing the exact content fragment path. But what you're describing is like say something by tag maybe. Does that sound right?

Mayte Eme 1:47:06 Oh. Um. Yeah, I don't know how you call them in in in EM, but something that we can say these events, right? Maybe it's a tag that we add like dinner and a show and then we query, hey, all the events, dinner and a show from this property show here or within the same site to make it easier, right?

Daniela Tea 1:47:21 Right.

Mayte Eme 1:47:28 Um.

Daniela Tea 1:47:28 OK, yeah. So if I and just by the way, because I see the time, what I can do is I'm, I can, I'm going to configure some things, but I can also share this tomorrow once it's like properly configured. But what I'm saying is like yes, we could select the route path for the content fragments and then.

Mayte Eme 1:47:41 Mhm.

Daniela Tea 1:47:48 If you have tags that are associated with that specific content fragment, you could select that tag and then it would pull everything that's related to that. So anything that's say like dinner and a show or something, if that's A tag, you could pull that and as long as those content fragments are tagged with that, that then should show up within this content fragment card list.

Mayte Eme 1:48:01 Oh.

Lisa Cardia 1:48:08 And did we lose the filter for events? I know we, I know we lost the filter for careers, but is it just because that was careers specifically or did?

Daniela Tea 1:48:11 Did we lose the filter? No. Oh. So in terms of and with careers, keep in mind the component that we're using for that is we we used a specific content fragment card component which we will take a look at tomorrow and that's why there's no filter on there if we use say the promotions component by default. A filter displays. I'm just going to add it here even though we're not actually going to use it yet. So this is. I think this is the filter you were expecting, is that correct?

Lisa Cardia 1:48:47 Yes, for events and and promotions.

Daniela Tea 1:48:48 Yeah. So to be clear though this the reason why we chose to use a card is because by default that UI this filter will appear whenever this component is used. Our understanding of like the careers website where it shows. I'm just showing it on the live site. What was it? Was it hiring, hiring events, right? Since there's a filter here, that's why we chose to use an individual card. Lisa, there's a filter here by with the way our component works, it does put that filter. I mean, if that's something that's desired on the homepage, certainly could be changed out.

Lisa Cardia 1:49:11 Thank you.

1:49:11 Mhm.

Daniela Tea 1:49:26 But that's the reason why there was no filter on there. And then same thing with on this page here. Yes, we can switch it out so it's using that promotions component instead and it would have the filter that I just showed in the previous page wherever that page is. But we had made a choice, at least for the homepage, to just use a content fragment card component because we didn't want the filter to appear on the homepage. Does that make sense?

Lisa Cardia 1:49:54 I well, I think it definitely makes sense not to have the filter like in the section on the home page, but I guess I'm just confused why we lost it. If we're using the promotion card model and it exists for promotions, why we wouldn't have had the the filter on that landing page at least.

Lucas Nelson 1:49:59 Yeah.

Daniela Tea 1:50:12 So that can certainly be changed out. We can explore that more tomorrow in terms of whether say for example the filters is matching what you're expecting is the fact that the search bar for example that we have here, is that something that you that you want to be displayed in this page like so those we can definitely discuss this. We'll we'll discuss this more tomorrow, but what I'm saying is if it if that's perfectly fine after we review the component, that can

certainly be swapped out on this particular page.

Lisa Cardia 1:50:34 Mhm.

Mayte Eme 1:50:46 OK. And Speaking of careers, since we're on the topic, can I pull career jobs, like hot jobs or hiring events into a property page? So we have reverb, let's say that we are hiring for reverb. And I'm just making a use case, but can I pull some of those like maybe with a tag or location? You know if location is Atlanta, GA and it's river then show on the river website as maybe a carousel or a grid of like 3 or 6.

Daniela Tea 1:51:13 So.

Mayte Eme 1:51:26 Mm.

Daniela Tea 1:51:26 Again, you can select the root path of where the jobs are located. I guess my question is would it be A tag or would it be, you know, kind of grouped together in one location? So like I can select anything from like say London and I can display it on any page, right? But if you're what you're asking for is you want to show like say Great Britain and Spain that currently cannot be done together in this one component.

Mayte Eme 1:51:42 OK. And if it's within a location, let's say property specifically, Tampa is having a job fair and they're coming up with a landing page because they do that and we want to show only the Tampa jobs, we can do that or we can maybe group them. Maybe it's a job fair about we have culinary job fairs.

Daniela Tea 1:52:10 Yeah, so.

Mayte Eme 1:52:16 More often than we would like, right? So we want those jobs. Um, only those.

Daniela Tea 1:52:19 So, so here you can see I've selected the Tampa folder and like, so I what I did was I navigated to the structure in the dam. So all those job postings again, these are coming in from work day and it's based off of the state and the country, right? That's how these got structured.

Mayte Eme 1:52:25 OK.

Daniela Tea 1:52:37 Structured so I can select that specific folder. So in your use case that you just described, my take Tampa, you want to show any Tampa jobs, I would select the Tampa folder and then all the jobs that are underneath that should appear within this component.

Mayte Eme 1:52:43 Mm. OK, and if I want to exclude a category under Tampa, I can't. It's just gonna show everything from Tampa.

Daniela Tea 1:52:59 When it's when you say, oh, you mean like, OK, like a category. So currently that's right, right, right, right. Right. Currently that is not something that you would be able to do within this component. It would just show everything that's within this specific folder path.

Mayte Eme 1:53:05 Like marketing and food and beverage accounting. OK. OK. And to be fair, we cannot do that right now with the ISAMS job. So I was just wondering.

Daniela Tea 1:53:24 Yep.

Edwin Aquino 1:53:26 OK, Daniela, before we have, before we run out of time, there's one other question. Sometimes with events we have a little field that for text specifically it's usually empty. We keep it empty, but sometimes we like include maybe A tag that says 21 plus event or free event or you know, a phone free event where we can't use our phones.

Daniela Tea 1:53:29 Sure. Uh huh.

Edwin Aquino 1:53:45 Is there anything like that that we can have on these events specifically where some way to display A tag of sorts on them?

Daniela Tea 1:53:45 OK. Edwin, can you send? I think I I feel like I've seen an example, but can you actually send me an example of that and I can take a look at that and discuss that with my technical team? I just want to make sure I I understand the exact ask and how it currently looks, if that's OK.

Edwin Aquino 1:54:02 OK. OK. Yeah, sure. I'll be more than happy to.

Daniela Tea 1:54:08 Thank you. Appreciate that.

Edwin Aquino 1:54:10 Of course.

Lucas Nelson 1:54:11 All right, I'm calling it. Thanks guys for your time. Appreciate you again, Daniela, for walking through events today and we'll look forward to seeing the updated agendas for tomorrow because we're we're amending it a little bit.

Daniela Tea 1:54:28 Yeah.

Lucas Nelson 1:54:29 To accommodate careers. So and I'll send out the recording and the the transcription. Hopefully this time the recording loads correctly so you guys don't have to ping me about that. And then I think the last point I'll I'll I'll put out there when I send the e-mail. Daniella was also calling out the. Highlight on the the questions that we we yeah, I'll I'll put that instruction as well. Yep.

Edwin Aquino 1:54:51 Yes, you.

Lucas Nelson 1:54:56 All right. Thanks for your time, guys.

Daniela Tea 1:54:56 Awesome. Thank you, everybody. Bye, bye.

Scott Sorel 1:54:58 Thank you. OK, bye.

Gonzalo Calasich (SHRSS)** 1:55:00 Thank you. Thank you. Bye.

Scott Sorel** stopped transcription

Session: Careers — 2026-02-12

SHRSS Adobe Knowledge Transfer-20260212_130224-Meeting Recording

February 12, 2026, 6:02PM

1h 53m 20s

Lucas Nelson started transcription

Lucas Nelson 0:10 Okey doke. Thanks for joining us this afternoon. I'm letting ACN. OK, cool. Let me share my screen. I'm gonna kick us off and then I'll hand it over to Daniela for the next. Component she's gonna review. Can you guys see my screen all right, Scott?

Scott Sorel 0:35 Yep, looks good.

Lucas Nelson 0:36 All right, cool. So this will look familiar to Scott, but be new to everybody else in the call. What we tried to do is we tried to put together a view, notional view of the knowledge transfer calendar. We're in week 1 here.

Angelika Akopyan (SHRSS)** 0:49 OK.

Lucas Nelson 0:53 To kind of plot out where where our KT plan is is tracking towards. This is out there on Confluence published under KT calendar as the page. You'll see it over here on the left side. So um. Key call out here as I walk you through the legend. CA is content authoring. We tried to align language based on the SOWTE is technical enablement. Scott, you'll notice I have a call out for morning times for those. So when I get midweek March. 2nd or sometime before if we need more lead time, yeah, probably the week before because we're going to start them on that Thursday. We want those those technical ones to be in the morning so Vinay can join because he's the kind of the source of knowledge on our side, yeah.

Scott Sorel 1:47 I. Okay. Yeah. And what what what do you think about then? We'll figure it out. Okay.

Lucas Nelson 1:51 So keep that in mind. Yeah, yeah, yeah, yeah, yeah, no problem. Adopt.

There's an adoption strategy part of this that we've brought Jacob White, some of you have worked with him in the past on for. We want those on Thursday and after we're done with the. Content authoring sessions that Daniela is running. We'll dig a little

bit more into those as we get closer and then the big point of what I want to talk through here just briefly before Daniela gets into her stuff. Is the platform expansion sessions the last two weeks and then we'll you know Jacob will be wrapping up his adoption uh strategy sessions so. And and these are in the SOW and what we aligned with the intention with Macario for this entire knowledge transfer work stream is that we're going to reach decision points for stuff that that that's in the backlog for this what we've been calling the, you know, the gap list. That that we want to see if we can fit with the with the current platform or we can modify what's in the current platform or if it's net new that needs fully new development on the new on the platform so. How this ties in and why I wanted to bring it up now is like

specifically right here where I have underlined and you guys can read this page whenever you want and if you have questions definitely let me know after after the call. But we're seeing a lot of questions. It's good. Maite, you're busy at night and we appreciate the diligence, but we're gonna have to start leveraging a question backlog. We'll have a different page on here that'll say question backlog. That that our team's gonna try to park some items in that that are are going, you know topics and questions that you have that that are requirements for preparation for that plat platform expansion part of this work stream. When I say platform expansion, again, it's there'll be tickets that we want to make sure we have fleshed out in in your Jira instance that are going to inform what we need to scope for a future, you know, for the future to to implement on the platform to to cover the. The gaps that you're identifying and these questions, some of them

we're noticing will fill, will fill nicely in to what you guys are going to provide us and what we'll have some disposition on when we get into these last two weeks, March 16th and March 23rd. So we just wanted to call that out as we're going through questions.

We're going to keep to what we've talked about. We're going to try to address in subsequent sessions or or you know respond directly in confluence where where we can and if further you know collaborations needed we we called out. Highlighting those will defer to follow-up discussions if they relate to other content authoring or technical discussions, or for a lot of them, they're going to be captured as backlog gap analysis or future consideration, and none of this should be a surprise. Because this is directly from the SOW and it's kind of working as

we've anticipated, although the question there's more questions than we thought, but it's not necessarily a bad thing, it's just we're

reacting to that and trying to make sure we accommodate it with a process. Um, yeah. So that's that. That's what I wanted to share with the team here. Are there any questions like quickly before I hand it over to Daniela? OK, Daniela, I did I did I give you some time? Are Are you ready to go?

Daniela Tea 5:49 Yeah, but sorry. Yeah, thanks, Luke. There's actually just one more update that I wanted to share and I think Andy was going to take that. It's with regards to some of the issues that we were seeing yesterday when we were trying to publish and look at it on the publisher. Andy, I don't know if you're available to speak on that right now.

Andy Lambert 6:11 Yep, sure. Hey everybody. So yeah, if you guys were doing the KT and and reported and that you were seeing delays and seeing updated content on the in the published environment, I started looking at the stage logs and found. A couple of artifacts that I want to actually need to submit the ticket. I'm going to send a ticket to support just to have them look at the environment and verify that things are OK now after well even during at the toward the end of the KT session it said it looked like. Content was showing up that Daniela was publishing and then we did some testing after and everything looks alright. I'd be interested to know if you guys have seen any delays today. If so, I'll grab from the logs and include that in the support ticket, but. Just want to have them check the published environment. It looked like maybe indexing of content, which is a job that a scheduled job that runs in the environment from time to time may have been slower than it necessarily should be and that would cause. The search kit functionality and the the back end stuff that that surfaces content to be slow and show them updated stuff. So anyway I just wanted to keep you in in the loop let you know Gonzalo. I'll actually CC you on the ticket so you have visibility into what how they respond. But right now the environment looks good. I just it's just for due diligence to to see where if we need assistance or they need to tweak anything then that's where we're at.

Gonzalo Calasich (SHRSS)** 7:50 Thank you. We we tested in the morning and we were still facing the same issue. You say that they should like if we create a a custom job, it should show up on the jobs page.

Andy Lambert 7:55 OK. Yeah, it should. Yeah, I am. Oh, go ahead.

Daniela Tea 8:03 So, hey, hang on. Sorry, Andy. Gonzalo, when you're saying, I think Andy, when you're saying job, is that different from Gonzalo talking about like the job content fragment?

Andy Lambert 8:12 Oh. Oh.

Gonzalo Calasich (SHRSS)** 8:15 Oh, different.

Andy Lambert 8:16 So it well, it depends right on the how the I'm not familiar with the details of how the job's. Danielle, maybe you could speak to it. Is there any reason why like when you're so this is manually authoring a job as opposed to it coming in from? The feed the um integration with Workday. or work right, which I read.

Gonzalo Calasich (SHRSS)** 8:39 Yeah, yeah, no, no, this is this is when you we have the the the option of creating a a new content fragment, right? And we created, we published, we wait 5 minutes, but still doesn't show up on the job search page.

Andy Lambert 8:47 Mm-hmm. Yeah. OK, but if it's either either yes, there's. My question is would if you publish other content like a event content fragment or a pay a test page, I would check to see if it's showing up immediately.

Daniela Tea 8:59 So.

Gonzalo Calasich (SHRSS)** 9:03 Thank you. Yeah, it shows up. Yeah, if you if you change, if you change another content fragment it works, but for for the page job it does not.

Andy Lambert 9:13 Then then that. Yeah. Then there's. Then we need to OK, that's helpful.

Daniela Tea 9:20 OK, so because yeah, Gonzalo, just to confirm and and so we can check back on the recording, we are saying that editing a job content fragment is not visible after you publish it on the job search page. Is that accurate?

Gonzalo Calasich (SHRSS)** 9:34 Correct. Once I create and I publish the contact fragment and I go to the jobs page, I shall see the the just created job posting and I'm not seeing that.

Daniela Tea 9:36 OK.

Andy Lambert 9:47 Got real quick, Daniela. Oh, go ahead. You do that and then I'll, I've got to follow up.

Gonzalo Calasich (SHRSS)** 10:02 Yeah, that's correct. Yeah, that's correct.

Daniela Tea 10:03 OK. Sorry. Go ahead, Andy.

Andy Lambert 10:07 Yeah, so could you paste into the chat if you have it now and if not you could do it later. Just examples of a couple of URLs for the job, the content fragments and author. That way I can check the logs against that and see what we need to find is.

Gonzalo Calasich (SHRSS)** 10:11 Yeah.

Andy Lambert 10:23 Where where the the bottleneck is or the the blocker like is it with the published process? Is there an error happening based on the content fragment model? You know we need to just basically do some troubleshooting and find the root cause and then and let you guys know

and then we'll. More remediated.

Gonzalo Calasich (SHRSS)** 10:43 Sure. So So what I can do is I can as soon as I create a couple ones I can shoot you an e-mail or or maybe in Slack. The the challenge we're having also is that when we create this custom job postings and we set the flag to is not API data right?

Andy Lambert 11:03 Mhm.

Gonzalo Calasich (SHRSS)** 11:03 The workday process, when it pulls all the job IDs, it's also including the ones that are manually created, so the process is deleting them. So that's another thing that we found, right? It seems that.

Andy Lambert 11:15 Yep. Yeah, yeah, we need to talk about that.

Gonzalo Calasich (SHRSS)** 11:19 Yeah, it seems that when they are calling this get all job IDs, it's not excluding the ones that should say no, this is this is not an API data. So yeah, so so we were having that challenge. So again, right, I can create a a couple ones and let you know.

Andy Lambert 11:30 Yeah.

Gonzalo Calasich (SHRSS)** 11:34 And and then they will disappear in the next 30 minutes because I think that's how how everything is running.

Andy Lambert 11:35 OK. All right, so I'm gonna I'm actually we've been talking about this internally and are aware that the API is over is you know affecting the manually created job content fragments and so look for a e-mail from me related to that and.

Gonzalo Calasich (SHRSS)** 11:46 6.

Andy Lambert 11:57 Our recommendation for for you know dealing with that coming up soon.

Lucas Nelson 12:01 It. And one more comment on that and then yeah, we'll we'll we'll go ahead and move on to what we're here for. Andy and Gonzalo, I created the cadence for the tech sync starting next week, Tuesday, Thursday. Andy, I think it'd be good to you know. Obviously send the e-mail, but use those sessions as well to to kind of, you know, drill further into what we're recommending. Does that sound good?

Andy Lambert 12:21 Yep.

Gonzalo Calasich (SHRSS)** 12:25 Yeah

Andy Lambert 12:25 Yeah, I'll send it that that way. Yeah, we we touch base on this morning. I'll send that so that they've got the let up, take, absorb the e-mail, let it marinate and then we'll get to dig into it on the first texting.

Lucas Nelson 12:37 Perfect.

Gonzalo Calasich (SHRSS)** 12:39 Sweet. Thank you.

Lucas Nelson 12:39 That works. Yeah. Yeah. Thanks guys. All right. Um, Danielle, you all ready?

Daniela Tea 12:45 Yeah, sure. OK. All right. Thanks everybody and thanks Andy for that. Trying to remember if there's any other updates that we need to share, but I think that was it. So more to come on that particular portion of of jobs.

Lucas Nelson 12:46 Alright.

Daniela Tea 13:03 So today we are, as mentioned earlier, we are going to pivot a little bit. I know the desire is to identify additional components that are used on the careers website and we'll focus on that. The components that I had personally identified when I was reviewing it, I'm trying to find my Confluence page. It is not on this tab. I had identified about four components or so that I wanted to go over today. And then also since we will certainly have additional time at the end of that, we can continue to review the careers website and then see if there's anything on there where we would like to take a closer look at so. Here is what I had to do. I'm going to share my Confluence page. This is what I identified that's used on the Careers website. We have the promotion content fragment, but I'm going to be showing promotions as a whole. This is currently being used for the hiring events, so we'll see. See how that works right now. I also saw we have the video card component which is used specifically for the testimonials. I also saw the video component is being used on a couple pages and we'll take a look at that and then the card component which we know is being used all over the place on the careers website. There is the icon variation that's being used, so I wanted to just take a look at how that was set up. Keep in mind though that we will certainly review cards additionally since there's certainly more than one variation on that want to cover exactly what was used. For the careers website. So I think this list, don't worry, this list can certainly grow as we continue to review the career site, but this is definitely what I want to talk about first and then we can move on to other aspects of the careers website. All right. So starting off now with our promotion search and promotion content fragment, we're going to do something similar to what we did yesterday and the day before, where we're essentially going to take a look at the content fragment model. And also some content fragments that are using that model. Then we're going to take a look at the component that's calling in those content fragments and displaying them to the end user. So here we are in AEM going to just navigate to the DAM so we can take a look at that content fragment model. And I'm going to go to SHRSS and Content Fragments and I'm going to click on Promotions and I'm going to click on KT just for my test data and I'm going to hit Create and click Content Fragment. All right, so looking at these templates, I want to select

the promotion template. I'll select that and hit next. And for my title, we're just going to call it KT. I'm going to hit create. Alright, as a reminder, we are having that support ticket put into default to the old editor. So for right now I'm just going to manually switch it to the old editor as we review these page review these fields. Going to increase the size of my screen a little bit. OK. All right, so let's look at what we have here for our promotions content fragment model. We can see here a couple of required fields and some that don't actually need to be filled out. And I'm also going to pull up after this the some filled out ones that we are using currently on our careers website. So starting at the top we have the ID and the name of the promotion. These are required fields. We also have a title and we can see where these things are displaying on the end user in a bit. We have statuses of active or inactive, a card image. As well as the alt text associated with the card image, these are required fields. Banner images for when you interact with the promotion and see it on a specific page. These are also required the date format. A couple of different ways you can display the date. If you want only the date, the date with the start time, date with the end time, or the ability to display override text. So these fields here you'll notice they are not actually required. So if you just need to use say the date overwrite text field, you can certainly do that and not fill out anything else. We have our promo types, loyalty or slot. One thing I wanted to comment on is these this promotions content fragment model was initially created based off of requirements for the casino's website. So you'll you'll notice that you know these options are specific to casino. Understand. Is that there is a desire in the future to perhaps leverage this content fragment model for some other additional use cases outside of casino. That certainly would be something that we want to make sure is captured during the gap phase, but just wanna make sure the team is aware that this specific content fragment model was mainly for the casino. Websites and that's what you'll see here. So I have our description field, location and venue with these options. The ability to override the road location and put just text if it's not something that's listed in here. We also have some CTAS for to be displayed on the card when it renders and then that LD JSON field we had talked about which is going to be present on. The content fragments in general, you'll see this field often. So this is the initial content fragments before you fill it out. Now I want to take a look at something that is filled out. Uh, such as this one. I'll take this one right here and then we're going to see how it looks like on the website. Let me open that up in a different tab. OK. All right. Here we go. Actually, I'm going to go back and look at the full time one, just so that way we're not getting confused between the ones that have similar data. So one second, I'm gonna go back and just open up the full time one. OK. All right. OK. So let's take a look at what we have here. So we

have our ID field. That's not going to be something that's going to be displayed to the end user. It's something that's part of the configuration. But focusing on what we see for the end user, we see our. Our name and title. We can change one of these to see which one actually affects this. I can do that right now.

Lisa Cardia 20:21 Wait, sorry to already interrupt, Daniela, but what? Where did you get the ID from?

Daniela Tea 20:24 So the idea is of field that's inputted by the by the end user or sorry by the author.

Lisa Cardia 20:31 But like, what would we put?

Daniela Tea 20:33 So this is a unique. This is a unique identifier that you would put in order to be able to display the specific content fragment as say like a singular card onto your site. So it's a way to be able to. Let's show that in action.

Lisa Cardia 20:34 If it's required.

Mayte Eme 20:49 Is that a made-up thing that we do? Do we just make up the stuff?

Daniela Tea 20:52 So that is. So that is a field that was identified during the requirements of something that was needed. So here's an example where I'm calling in this.

Mayte Eme 21:00 But I mean, I for the requirements for the casino promotions, we did not require a unique ID. We required a unique ID for targeting and analytics, but that was pretty much it.

Daniela Tea 21:14 So. I think we would need to check as to the for that specific bill. Perhaps that is the reason why. However, you can see here with my content fragment card component, I'm pulling in the specific promotion that's listed here using that ID field. So this is one way to be able to display this promotion. We are also going to show how it will display within the promotions component, but if you need to display just one singular promotion and feature it, you know on like a specific page or something, this is the ability. This gives you the ability to just show that. That one item as needed.

Lisa Cardia 21:56 Are there like required letters, numbers, sentence casing left like why you chose HE?

Mayte Eme 21:56 Um.

Daniela Tea 21:59 No.

Mayte Eme 22:00 Yes.

Daniela Tea 22:01 Nope. The only reason why HE was chosen was for hiring events and then one just for for tracking purposes. There's absolutely nothing there that is. There's no like text require text requirements here. It's just like. Like it doesn't have, it could be, you know, like HE or something, but you want it to be unique, right? Like because when you're referencing that specific job, I want it to to only show the one that I have here in this ID field.

Mayte Eme 22:24 Yes. OK, let's call this as a gap because we have to fix it and then see that at least remember what I type. Because honestly, if I'm a content author, I'm just gonna do blah blah blah, right? So does he remember that I've used that? So I don't use it again and then pull the wrong thing. Like is it smart enough to know that there's there's existing set of IDs?

Daniela Tea 22:55 So I don't know like sorry I'm I'm like trying to show it but you can't see it. But there is a message that says checking unique validity. Like I know it's really fast and it's flashing but when I like skip off of this you can see that it is checking in this field whether or not this particular value is unique.

Mayte Eme 23:14 And when you.

Lucas Nelson 23:15 Daniela, would it let you save if if you used one that already existed?

Daniela Tea 23:19 We could try that.

Lucas Nelson 23:20 I'm sorry to make you be a QA on this. Sorry.

Daniela Tea 23:21 It's OK see, so the value needs to be unique. The same value is also appearing in a different one.

Mayte Eme 23:28 OK. And when you when you thank you look for that and when you paste it somewhere else this does it, is it smart to tell you, hey these are the ones that you can select from or you have to like remember it and or paste it?

Lucas Nelson 23:28 Thank you.

Daniela Tea 23:40 When you say when you paste the ID or.

Mayte Eme 23:44 So I saw that you put it somewhere else, right? I don't know why, but you had to put it somewhere else. So is that that drop down that you select or?

Daniela Tea 23:50 Are you talking about in this in this component? This is this is a blank text. This is a regular text field.

Mayte Eme 23:58 So it's not as smart.

Lisa Cardia 23:59 Yeah, so it's like if I were to add an event, but then someone took it down and then they went back in because I was like, hey, can you add the halftime or the hourly rolls event now they would need to know like they would have to go into the fragment first I guess to check the promotion ID, copy it. To get it here like we wouldn't be able to like go through a folder path or anything to grab it, I guess. Is that I guess the way to answer that? Like how would we know if other authors created the code where we would go obviously to keep some consistency and organization there too?

Mayte Eme 24:21 Mhm.

Daniela Tea 24:26 So. Oh. So just keep in mind I'm showing how the content fragment card is using this promotions content fragment model. Let me add let's actually I have that here. So this is the actual promotions. The promotions component and So what this is going to do?

Mayte Eme 24:52 And one more question, is this ID, sorry to cut you off, but really concerned now, is this expected to be used for casino promotions or just for careers because?

Daniela Tea 24:53 Is Yep. This was supposed the the intention of this component was initially created specifically with casinos for casinos.

Mayte Eme 25:11 But we're not using it for casinos, right? We'll fix it for casinos because we deal with a lot of promotions and more than one user. We can't be remembering made-up by this.

Lucas Nelson 25:23 Yeah. So might say definitely capture what, what, what it doesn't currently have. You know, that's exactly the stuff that we would want to disposition in those last two weeks. You know what I mean? OK.

Mayte Eme 25:32 Yeah, this one is more of something that we didn't ask that got added. So it's not like a gap, it's like an extra that we don't need.

Lucas Nelson 25:41 Yeah, think think of it like at the end of it is you know there there there's a there's a change in modify piece of it too. There's adding and then there's change in modifying as well. So if there's something here that's implemented that's not quite meeting the mark and needs to be updated, that should be a part of it as well because it would be updating the. Um, you know, the component that was already delivered. So yeah, but I hear you.

Daniela Tea 26:04 So yeah, so Yep.

Lisa Cardia 26:05 And then Daniela, I know you were about to show us it with the filter, but the reason why I didn't want you to jump quite there yet is because my question was related to getting it on the page without the filter, which is what we have right now on the stage site for careers. So while it might not be needed for the filtering, I just want to know what the

process is like. For a user to get it without the filter before you jump in to say that's why I didn't want you to jump because we don't have the filters on the stage site so.

Daniela Tea 26:28 Get it without to get it without the filter. Yeah, so I I think my my question though is and I'm actually going to let's pull up the yeah. So this is where I wanted to understand and why I want to show the component previously. I think it was yesterday we were talking about how like for example on this page you did, you guys do want to filter on top and so that's why it makes sense to use promotions component in order to be able to show the filter on top and here on the homepage.

Lisa Cardia 27:00 Mhm.

Daniela Tea 27:03 There's no filter, which is the reason why we use that different component, the content fragment card. And so in terms of like for example, say like if if we wanted to capture as a gap that the you wanted to have promotions but have it have an ability to remove the filter, that could be something that could be captured as a gap.

Lisa Cardia 27:10 Right.

Daniela Tea 27:23 Or desired. The reason why we had to use that content fragment card component is simply to be able to match what we were seeing on the live site with the components that we had. But yeah.

Lisa Cardia 27:32 Yeah, I I just don't want to lose the question of it was just about around getting this on the page means we can't like sift through options to know we're selecting the right card. A user needs to go into the content fragment, find the ID, copy and paste to get it to this page. So I just wanted to make sure that's clear without the promotions filter. Those are the steps to get it.

Daniela Tea 27:54 Without the promotions filter, if you're using the content fragment card component, yes, this.

Lisa Cardia 27:59 We would need to know that ID like to my taste point, you'd have like if other authors are in it, or even if I just don't remember what I made for the code, we can't go through a folder to find it in the fragments. We have to remember the unique ID, so we just need to make sure we copy and paste it. From the fragment asset folder to get it here.

Gonzalo Calasich (SHRSS)** 28:22 Yeah, I correct.

Daniela Tea 28:22 OK.

Lisa Cardia 28:23 There's no other way without having it copied and paste like that. There would be no other way whether I made it or someone else.

Gonzalo Calasich (SHRSS)** 28:27 I I did.

Lisa Cardia 28:32 Sorry, Gonzalo, go ahead.

Gonzalo Calasich (SHRSS)** 28:32 Yeah, no. My suggestion would be ideally like you have this page patch, you should have something that says source and you will click and you will navigate to to the content fragment section and pick up the one that you just created for example right instead of you remembering. That that's how it works now, my two cents.

Mayte Eme 28:52 Wait, how do you say it works now? Because we don't have a unique ID.

Gonzalo Calasich (SHRSS)** 28:57 No, what I'm saying is that you don't have to remember the unique ID. What I'm saying is that you should have like another field that says source, right? So you add the card.

Mayte Eme 29:04 Oh, no, no, sorry, Gonzalo. I I do get that. I mean, I but I'm saying we don't use that right now. We we don't have to enter an ID for a promotion.

Gonzalo Calasich (SHRSS)** 29:07 Oh, OK. OK. No, no, no the the source part that's that what what I was explaining that that's how we have it now.

Mayte Eme 29:19 Uh. Oh, OK, cycle source that you can. Got it, got it, got it. Not the use case. OK.

Gonzalo Calasich (SHRSS)** 29:23 That you not not correct.

Lisa Cardia 29:24 Just to get the card on the page. To get the card on the page without a filter, we would just use the source of the card and find it through a folder path.

Daniela Tea 29:37 Mhm. OK, yeah, no, we understand what the ask is. So right now though, the way that this does work right now is by selecting what the promotion ID and you'll see here. So this content fragment card component, keep in mind it's not just used for promotions, it's also a way to be able to display events or. To be able to display news. So this is this is not restricted to just promotions, but for the case of promotions or events it is expecting that ID. So certainly something that like I mentioned what Gonzalo was discussing could be identified as and listed as part of the gap analysis for an enhancement to this. this particular component and that

Mayte Eme 30:20 Oh no, no, no, don't, don't. We don't want. We don't need this. So let's not enhance this to use the unique ID. Just creates more work on content others. We gotta redo it so. It someone needs.

Daniela Tea 30:33 I guess what I what I'm trying to say Mayte is we we understand that the having to put promotion IDs by any means is not something that's desired. However, to be able to show a specific event would require and or I'm sorry, a specific promotion would require say like an additional field like being able to pull up the data and then selecting from the list of content fragments but either. But either way, that is something that we would need to discuss and we want to discuss during that gap phase.

Mayte Eme 31:00 Yeah, let's discuss the right way to do it and not add to this one, please.

Daniela Tea 31:06 I'm going to hit, yeah, I'm going to hit cancel and so Lisa, to your point, I think we covered like how you would use this component right now and how it's being used right now in the stage site by putting in the specific ID.

Lucas Nelson 31:06 Sounds good.

Daniela Tea 31:23 But I did wanna show, yeah, that the promotion search component. This particular component is specifically looking for promotion content fragments. So you'll see here. Sorry, I didn't mean to hit the configure window. So you'll see here there are three different.

Lisa Cardia 31:25 Yes.

Daniela Tea 31:43 Promotions that have been added within our folder and you can see that they're being displayed here. However, with the promotion search component by default it does display filters. It displays the ability to switch between the two different views and it also displays a search bar. So I know one of the questions. Questions. I believe I saw a JIRA ticket or so which asks why hiring events does not have the filter that can be added. You know this particular component can be added there if that's desired. However, I do know that you know perhaps. There might be some instances where you know if you evaluate the component, you might not want it to have like the filters looking like this or something, and so that's why we had chosen to do it as a single single cards instead. So if that's something that you guys want to swap out, that can be done.

Mayte Eme 32:31 So. But we have it right now, right in the current websites, and it was decided not to do it even though it can be done.

Daniela Tea 32:40 So the reason why we're saying this is because these are supposed to be events, is that correct? These are events, the event calendar as we had, they are OK, so they're hiring events and so the hiring events could theoretically be using the event content fragment.

Mayte Eme 32:49 They're hiring events not to get confused with.

Daniela Tea 33:00 Model. However, there are some capabilities that we know you guys need for the hiring events to be displayed a certain way, such as the override text ability and such as I believe previously we saw like the event shows the address versus the name of the. The property, etcetera. And so when we were doing our evaluation instead of using the event content fragment model, that's why we chose the promotions content fragment model. However, we wanted to make sure we talked about this with you guys to understand if it makes sense to use a promotions content fragment. For these hiring events or if that should be switched out to say calendar and then understanding the limitations of that. So what we have currently on the stage site right now is we made the choice to do it as promotions versus using the event content fragment model and that's what we want to know. Should that be switched out? Should it stay as a promotion so it.

Mayte Eme 33:43 OK.

Daniela Tea 33:55 Looks like this that that's a decision we need to understand.

Mayte Eme 33:58 I can't answer without understanding what each one does, and I'm not fully aware yet. Not all events happen at properties. So when you say address versus property, events happen outside of our properties. So is that something that both of these components can do or just the one?

Daniela Tea 34:17 So with regards to our promotion component and this was, I'm switching it back to whatever the unique ID was for this. Let's take a look at this. So where we see here like every Tuesday 10:50, we know right now that our. We know right now that our events component does not allow you to display it like this because this is using some overwrite text, right? So we don't have a date overwrite text field currently in our event content fragment model. That's one of the reasons why we said OK, this is something that's in promotions. You could use promotions to play like that and then here with this particular venue you can see here that's also using the location override text versus connecting to the locations content fragment that's that has data from DPLT.

Mayte Eme 35:15 But the locations don't come. I mean, we might go at our Convention Center, right? Not our location.

Daniela Tea 35:20 What I'm saying though here is this gives you the ability to put whatever the location is. There's absolutely no connection between this and DPLT. With events though, there is a connection with DPLT since you're selecting from a list of locations that are in A EM.

Mayte Eme 35:30 OK. Wait, so you're saying events can only have locations from DPLT? So if the location is not in the DPLT, we what do we display like we can't display event?

Daniela Tea 35:46 So when we when we take a look at, let me pull up an event.

Mayte Eme 35:51 Because locations should be in the DPLT, but we all know it takes some time, so we will need to put events when the location is not yet in the DPLT and we should, you know, type it, type whatever it is so customers don't know.

Daniela Tea 36:03 So right now you see here the location reference has to point to an existing location content fragment. This these location content fragments is data that's being sourced from DPLT.

Mayte Eme 36:16 So DPD wasn't been well, OK, OK, we'll just add questions to the page. I don't want to take all the time on that.

Daniela Tea 36:24 So let's let's, uh, where? Where'd it go? Oh. One second. Oh, OK, OK. I think this was it. This was it, alright. Alright, so let's take a look at this promotions search component. And see how some of these other fields are mapping to it. OK, status active. So we see our card image, card image alt text. The intention for that of course is to display as a card. We have our banner image, so if I am clicking on a promotion. And there's a separate page that's going to appear there. I don't think these are set up for that. My understanding is for the current hiring events you guys have, I believe it's just correct me if I'm wrong, but I believe it's just a. It's just like a these are external links. Is that correct?

Mayte Eme 37:25 Not always. Sometimes we have events, they create pages and we link to them.

Daniela Tea 37:31 OK, got it. Yeah. So for for this case, I believe this is relevant for say the if this was used for a casino promotion. My understanding of the casino promotions is there are additional pages associated with it.

Mayte Eme 37:43 Not, not always, especially promotions. Some of them don't even have detailed pages behind them.

Daniela Tea 37:48 OK, well in this case the reason why this was added was again because promotions was was created with casinos in mind. I'm going to Scroll down now to our date format. The overwrite text as mentioned is what's populated here every Tuesday 12:50. But if I wanted to choose like a start date, start time, end date, end time, I again have the ability to display the date in different ways based off the fields I fill out. Description. We can see a description is being displayed here on the card. And let's see. So our CTA labels apply now. So this here is the promotions content fragment and we can see how it translates, we how it translates to the cards that's on the page and. In terms of the actual filters, and sorry guys for for jumping from page to page, but in terms of the actual filters that appear on top of the component, let's take a look at how that works. But OK. Here we go. I'm going to open U the new page in the author and I'm

just going to close the component to configure it. Right. OK, so here we have the configurations that could be set with regards to the filters at the top. We can see here it says select category, which we are going to correct. If you select one or more, this label will display depending on how many have been selected. The filter options include category, venue and date range, and so you can see the different placeholders for each of these different types of filters that you can put. If, for example, you don't need to have any of these filters, you can remove. Let's go ahead and remove, say venue for example, and I'm going to hit done. It will remove that specific filter from the component. However, one of the limitations that we've observed is currently if you remove all the filters, that's where this bar is still being displayed. Currently there's no way to to hide that. I'll just hit done so you can see what I what I'm talking about. So that is that is definitely one thing that we anticipate we would want to discuss further during the gap analysis portion. Right now I'm just going to. Put in a filter so we can see how that displays if only one is selected.

Lisa Cardia 40:26 Are the options for the filters, are they hard? I mean managed in the dam or who's managing those if we did a different option?

Daniela Tea 40:26 What? No. Who's managing like like who's adding these options within? So that's within the component code, like the category, venue and date range as additional options for filters. It sounds like Lisa you're you want to know like what if you need another filter added to this? Is that is that like what you're? Yeah, OK.

Lisa Cardia 40:50 Yeah, yeah. Like who would we go to for? Or could an author do that? Or is that, uh, like the dev team?

Daniela Tea 40:56 That would be a dev team update since it's updating the component itself.

Mayte Eme 41:01 So we cannot manage our own filter options.

Lisa Cardia 41:01 OK.

Daniela Tea 41:05 So the way that this particular component currently works is it's I believe it is using this hard coded list based off of what we had captured for promotions. However, again if you guys are trying to say enhance it in the future to include additional filters. So it's potential that this could be moved to say a generic list which then could be author managed, but as of right now that's not something that's available for this component.

Mayte Eme 41:32 Yeah, he has to. He has to. We have the ability to manage every single filter we have on.

Lucas Nelson 41:38 Yeah, let let's capture it, Mayte. OK, yeah, I Danielle is just being straight with what what's implemented right now. I just want to, yeah.

Mayte Eme 41:42 Sure. Yes. And I'm confirming we have the ability. So this is a gap. So yeah, let's move on.

Lucas Nelson 41:49 Yeah, sounds good.

Daniela Tea 41:53 OK, yes. So looking at at the next field we have our default results display. So this is just saying if you want to display it by default in list view or if you want to display it in default by grid view you have the option to select that. Of course as an end user I'm able to select between that when I'm viewing on the site. But if you have a preference as an author, you're able to select that here are clear filters, label text, search placeholder text, which is right here. Search for promos, no search result text. So if you try to search for something and it doesn't appear, this is the message that will be there. And then of course we have some pagination set up. In this case here we're saying 15 results can be on this page before pagination shows up. If you need to make it smaller, that can certainly be oops, we don't want negatives. Yeah, there we go. I'm just gonna put 10 here. Promotion content fragment based path here. If I want to show by default, if I want to show all promotions that exist in AEM by not filling this out, it's saying OK, let me just find all promotions. If I want to filter it to say like a certain specific folder, I am able to do that by selecting where I want within the DAM. So in this case, I just had my folder for like KT, my folder for careers, and depending on what I select, this component will just show the ones that are located within that folder. You can see I left it blank and that's why you're seeing options listed in here. It's just pulling in anything that's using a promotion content fragment.

Lisa Cardia 43:32 And would that be the same thing? I think we may have discovered yesterday with events. So if it's not necessarily under the same parent folder, but we want two category folders, we we can't do that at this time, correct?

Daniela Tea 43:41 Mhm. Right. I think yesterday in the example we were talking about the use case was like say like something that was like tagged, right? Yeah, in this case here it is based off of where the folder is located while you. Yeah, while you can choose like say I wanted, you know all the promotions here, I I can choose promotions.

Lisa Cardia 43:53 Yeah. The main folder. Like casino promotions versus like a hotel promotions, like whatever we wanna filter it to maybe.

Daniela Tea 44:08 Yeah, so if I chose promotions, it would show everything down here. If you wanted, say, just casinos, you would select here. But say there was like 4 folders here. You only want to show two at this time. Right now that is not available. Yep, Yep.

Lisa Cardia 44:21 Okay, thank you.

Mayte Eme 44:23 OK, so that's another gap.

Daniela Tea 44:25 Yep. OK, um.

Mayte Eme 44:30 How do you remove the the search field from if I just want the filters and not the search?

Daniela Tea 44:36 Yeah, so so that's not something that can currently be removed. That along with the filters. It sounds like that that would make sense to be able to hide say the filters in this to be able to display it as this list using this component. So search will always show.

Mayte Eme 44:53 Oh wait, so if you use promotions, it comes with a filter and a search. We can't remove it.

Daniela Tea 44:59 At this time.

Mayte Eme 45:00 So we can't have the promotion cards anywhere else on the page, like a grid or a carrot, like nowhere else. It has to be with a filter and a search.

Daniela Tea 45:10 So.

Lisa Cardia 45:11 That's when we use up the ID, the ID of that CF card, so without it.

Daniela Tea 45:13 Yes.

Mayte Eme 45:16 Yeah, but that's 1 by 1 by 1.

Lisa Cardia 45:18 Oh, like a grid of them or a carousel grouping?

Mayte Eme 45:20 Yeah, yeah, because there's no way we're gonna be updating them, right? Like, oh, this one, it drop off. Now I gotta add another one. That's gonna take forever plus 24/7 support.

Lisa Cardia 45:26 Singular, yeah. Yeah.

Daniela Tea 45:34 Hmm.

Mayte Eme 45:37 So if we're thinking of using, if we're thinking of using these promotions thing for hiring events.

Lucas Nelson 45:38 What else, Daniella?

Mayte Eme 45:46 That that's not gonna work.

Daniela Tea 45:50 OK, yeah, so taking some notes down here. So one thing I did want to point out. So this is also something that I wanted to cover in the. Gap portion because it doesn't exist today. So we do have a content fragment card list component and the reason why I said this will be considered a gap is because as of right now we because we were focusing on. Sites that did not use promotions and this was going to be enhanced later, but this right now here you can see I'm able to pull in a specific content fragment model. In this case here it's just using events. But what I'm saying for a gap, having promotions to be an option here is something that I believe could be captured. And then what would happen is you're able to again select from say like that root path or say from like tags or say a specific fixed list. So instead of having to do things one by one with the content fragment card, it would display as a list. And so I would recommend like this is the type of component that I would say would be appropriate for the use case you were describing. I might say, but the reason why I say this gap is as you can see right now it's only focused on use and events.

Mayte Eme 46:56 Mhm.

Lisa Cardia 47:14 I did have a few other questions too. With the promotion search, I don't know if I saw the option to edit the text that said like search for promos. Was that in there?

Mayte Eme 47:16 Yeah.

Daniela Tea 47:17 Yep. Mhm. Oh, that that should be there, yes, as the search placeholder text.

Lisa Cardia 47:30 Oh, OK. And 2nd for all of the labels, not the not the placeholder I guess, but the the the things that are hard coded, how would we be able to?

Daniela Tea 47:35 Uh. OK. Mhm.

Lisa Cardia 47:48 Like, uh, change that for a language, let's say so like. We have the option to put the placeholder for for the text, but then there's certain things that are like hard-coded in that search, such as filters title, the filter CTA. So like the title above select category looks hard-coded.

Daniela Tea 48:10 Mm-hmm. So hang on. So like you're saying like this particular text that's here where it says filters.

Lisa Cardia 48:14 Yeah, certain elements that I didn't see an option to put a placeholder text because we have some websites that use language. So if we're going to like write the language, those words would still be in English.

Daniela Tea 48:23 Mhm. So, and this is something where yes, I do want to. This is where I would ask my my TA tomorrow during my discussion. So keep in mind that what I understand that there are different languages on the site and we're using the Transperfect. Plugin in order to have the content display like that. With regards to the actual components, I do know that our development team does have specific like language strings, so when they build out the component you know it can translate based off of. What the site is? I need to confirm though, at least for this specific example, as well as also just examples in general of what portions of the component have been captured to be translatable versus what's not. So I do want to check in with my tech team tomorrow about that Lisa, because definitely understand that the expectations.

Lisa Cardia 49:22 Yeah.

Daniela Tea 49:23 If this is used on like say a site that has Greek, this should be in Greek versus in English, right? So.

Lisa Cardia 49:28 Yeah, just want to make sure that at least at the minimum we could override all of the areas.

Daniela Tea 49:34 At least at a minimum to be able to override all of the areas. So out of curiosity though Lisa, like if like you were using this on a site that was a different language, how like would you put in I guess like whatever this would be in that different language?

Lisa Cardia 49:45 Mhm.

Daniela Tea 49:53 OK.

Lisa Cardia 49:53 Every word that's not like a branded term.

Mayte Eme 49:55 We.

Daniela Tea 49:56 I see. OK.

Mayte Eme 49:57 Every everything on our website is manageable, edible, edible that you can edit. We can edit and you can translate it so we can translate labels, values, pretty much anything. And Speaking of Greek, we're actually getting ready to start on our website, so more languages are coming in.

Daniela Tea 50:16 Yep, Yep, understood. Yeah. So let me talk to my tech team during my sync tomorrow specifically about that. And I'm sure, Lisa, if you want to go ahead and add the question, that would be great. So then I can also ask him to respond to it. But we definitely want to get back to you on how that, how that works, but we won't be able.

Lisa Cardia 50:31 OK.

Daniela Tea 50:36 To get that until at the earliest tomorrow, so please make sure to add that question though.

Lisa Cardia 50:39 OK.

Mayte Eme 50:41 And one more thing, Daniela, just so you know, you mentioned Transperfect. We do use Transperfect, but not all the time. There will be a lot of manual translations for specific languages, and I know you your thing supports it, so we should be OK.

Daniela Tea 50:44 Hello.

Mayte Eme 51:10 OK.

Lucas Nelson 51:11 Daniela, is that topic a CA topic or a technical topic?

Daniela Tea 51:11 All right. Um, Yep.

Mayte Eme 51:11 So.

Daniela Tea 51:15 That's a technical topic, yeah.

Lucas Nelson 51:17 So we'll just need to make sure we clue in Maite on technical enablement. Just a call out for Scott more than anybody. Thanks.

Gonzalo Calasich (SHRSS)** 51:26 I do. I do have a question. Let's make sure when we talk about that, let's include if the transfer perfect plugin that you guys use will take care of the labels on the component, the ones that are being done by developers. The reason being that in in Sitecore every label is content managed and because it's content managed can be, you know, sent to the.

Daniela Tea 51:27 Yeah. Mhm.

Gonzalo Calasich (SHRSS)** 51:46 Transfer through the transfer for plugin. So just want to make sure that also labels are considered in that topic when we get there. Thank you.

Daniela Tea 51:52 Yeah, absolutely, absolutely, Gonzalez. So we'll take the first pass at the at answering the question that Lisa has and any other additional follow-ups. It sounds like we would be able to cover that within the Transperfect knowledge transfer session. So yeah, we'll make sure that that is addressed. So in terms of the promotions search component, I'm just going to open this up again if there's if there's anything, any specific fields that we want to additional clarity on. Is there any more questions though about either the content fragments or? The component itself.

Mayte Eme 52:35 So if I understood correctly, you have to create the. Everything is packaged where we cannot decouple anything from that page and you have to create the yes, the content framework for a promotion.

Daniela Tea 52:53 Mm-hmm. So you create a content fragment for a promotion. Currently the way it works today is you would either be able to display it as an individual card by consulting the ID. So you can see here. Yes, you can decouple it individually. I understand that that's not the.

Mayte Eme 52:55 Yeah. With that ID thing, OK. Yeah.

Daniela Tea 53:12 Desired behavior. One of the gap items that we had mentioned that we want to cover in the gap is would it make sense to enhance the content fragment card list component? Yep, to include that specific type. And then the third thing is right now you are able to display it within this promotion search component, but.

Mayte Eme 53:14 Right. Yes. I invest. Yeah. Mhm.

Daniela Tea 53:32 It does come along with the filters and the search bar.

Mayte Eme 53:35 And in the content fragment, and I'm not gonna go too much into this because I know scheduling is a gap, but I think I saw some dates and you skipped them. So I just wanna make sure what do we have start?

Daniela Tea 53:38 Mhm. OK, yeah, yeah, one second. Let me. Sorry, I I've lost it. Here it is. OK, yeah. So this start date, start time, end date and end time. These are the specific fields that would have displayed in.

Mayte Eme 53:49 As well, you've not started. Also, that's not scheduling, that's just a display because we can schedule for tomorrow, but the date is, you know, three days from now. We don't have that.

Daniela Tea 54:01 Good. This, yeah. Sorry, let me repeat what you said. So if this was, yeah.

Mayte Eme 54:13 So let's say the event is this Saturday, right at a, I don't know, Convention Center in Broward, but I'm going to display it today or sorry, I'm going to, I want it to be displayed tomorrow and the event is for Saturday. So basically when we publish it, it doesn't publish based on this date, it just publishes now.

Daniela Tea 54:30 Oh, I see. OK. So this here is a display date is is what is what they're. Yeah, this here is a display date.

Mayte Eme 54:39 OK, OK, so those are display only they do nothing with OK.

Daniela Tea 54:45 Yeah, this here is a display day. It's not intentional for scheduling. There is of course that the scheduling just going to do this. There is of course the scheduling for now or later with the activation date that's available here. However, the actual content fragment itself that's just.

Mayte Eme 54:46 OK. OK. OK.

Daniela Tea 55:04 For display purposes.

Mayte Eme 55:06 OK. OK. I got excited and I thought that was the scheduling, but OK, thanks.

Lisa Cardia 55:09 If we schedule it for later and we make an edit to the existing, does that impact anything or do we it? It will still schedule for later, but we went back in and we maybe changed the location because they they moved venues or something.

Daniela Tea 55:24 Schedule. Uh, OK.

Lisa Cardia 55:26 So if if we went in and changed it from the location saying Seminole Casino, Brighton Bay or whatever, and because they're like we're gonna have to have it at a Convention Center nearby, but we've already scheduled it. What does anything happen if we went back in and edited the same fragment?

Daniela Tea 55:33 Mhm, mhm.

Lisa Cardia 55:45 Does it maintain the scheduling or would anything get pushed live?

Daniela Tea 55:49 So it shouldn't get pushed live in the sense that I'm trying to see if I can. We can try and do this right now. Let's.

Mayte Eme 55:58 Yeah.

Daniela Tea 55:59 Let's see. OK, be able to like show this like right here on the call is going to be a little difficult just because I'm going to have to save it the manage publication and then save it again. But we can try it. We can try to do that, alright.

Mayte Eme 56:11 But that's exactly what a user would do, right? What you're doing now.

Daniela Tea 56:14 Yeah, no, I understand that. I'm saying for the purpose of the call, because I know we have some limited time, I do want to make sure that that we're covering the other topics. But let's see here. Let me see what I can.

Mayte Eme 56:15 OK, OK, good.

Lisa Cardia 56:25 If it'll be helpful too, I have one more question on the fragment of is the promo type. I know we said it was the two options were built with casino in mind and I don't think you selected one for one of the examples maybe so it's not required, but are those hard coded? Like how would we get extra promo types?

Daniela Tea 56:34 Yes. Yeah, so right now these are these were determined within, so these should actually be within the content. You should be in the content fragment wall to be able to add additional ones. However, that's not going to be something I think is that's going to be accessible to every user.

Lisa Cardia 56:47 Development. OK, we did take the content model fragment class at least the authors, but I obviously that's like pretty like extensive I guess more so related. So I think internally we'd have to figure out teams of doing that or if that's just something maybe the admin authors get.

Daniela Tea 57:01 So. M. OK.

Lisa Cardia 57:18 Trained on but.

Daniela Tea 57:20 Yeah. So, so just really quick. So when it comes to like the content fragment models, there is you know the ability to to create your own like depending on like the permission levels that have been set for that, right. So like I understand Lisa, like you don't want to open this up to every single person and and change it. And so that of course is going to.

Lisa Cardia 57:37 Yeah, I don't even want my team to like be responsible for breaking the like UX of how something was built, but like the options for a field, I would assume we would have had the capability to making new ones.

Daniela Tea 57:41 Yeah. Huh.

Mayte Eme 57:50 Yeah.

Daniela Tea 57:53 So what I guess what I'm saying is when it comes to a content fragment model, there's a content fragment model editor, right? In terms of who has access to that, that of course would be determined based off of like the user groups and such. However, this is this is. Different from say like adding another field to a component where that would be more of a developer has to go through that, update the component, do a code deployment, so that way it would be available for an author to use. So there is more flexibility when it comes to actually editing a model. Like a content fragment model, but when it comes to actually editing a component and adding additional drop down fields to that dialogue window, that is going to be development work.

Lisa Cardia 58:45 Thank you. I guess if you want to continue with the scheduling.

Daniela Tea 58:48 Yeah, we let's, let's. Oh, sure, go ahead.

Don Middlebrook 58:50 I I do have a question around the asset. So when you pull in the the asset, so I I see that this looks like it's a one to one ratio the image when it's in the card. So I know we've asked before about the dimensions that you know that we should be using for these but.

Daniela Tea 58:54 Yep. Mhm.

Don Middlebrook 59:09 Let's say I pulled in an asset that's a 16 by 9 and how is that going to be placed? Is it something that we have to adjust if we want to make sure the proper area of the image is viewed? On the card, let's say you know the Hard Rock, you know that front arts all the way to the left or the right of the image. We want it centered in the card. Is that more of the image position?

Daniela Tea 59:36 It. Yeah, so it sounds like what you're describing is actually the like, for example, say you wanted this to be all the way to the right, right? Like the guitar itself. Is that so like simple?

Don Middlebrook 59:45 Yeah, or or the original image is already to the the side. We want it centered, right? So somebody pulled in.

Daniela Tea 59:52 OK, yeah, so so with I believe pretty much every component that has that that has like an image associated with it, you will find the image position tab if what I'm understanding is correct.

Don Middlebrook 1:00:07 Mhm.

Daniela Tea 1:00:07 Like what you're asking, like if this was set to like all the way to the right, how would you move this to be, you know, more so that way the the focal point is changed. And so that's what the intention of this specific tab was, being able to set the position of the image.

Don Middlebrook 1:00:15 Yeah. Yes.

Daniela Tea 1:00:26 In both desktop and tablet and then also in mobile. So like you know in mobile sometimes you might not want it to be that you know that way you want it to be separate. So that's what this tab is for and you're going to find that on I think probably every image component. I would assume the card should have it, which we will find here. Yeah, so any.

Lisa Cardia 1:00:34 Mhm.

Daniela Tea 1:00:45 Component that has an image will be able to have that. So you can make those manual adjustments. But when it comes to like say a a list of some sort, that's not something that's going like this is not going to have that image position because.

Don Middlebrook 1:00:54 I need.

Daniela Tea 1:01:01 You're essentially having to change all of the image positions versus just individual like if you would with the content fragment card. Does that make sense?

Don Middlebrook 1:01:09 OK, then I yeah. But then on the other one, how would we adjust that image? Is it more setting up the smart crops with dynamic media? How? How? How would?

Daniela Tea 1:01:19 Yeah, so currently at currently right now with with this here you are unable to adjust an individual row within here, so it would have to be some sort of adjusting the image outside of this component first, whether it's with.

Don Middlebrook 1:01:20 We go that.

Daniela Tea 1:01:36 Say if you do Hotosho and you cropped a specific way, that's certainly one way to do it, but it would not be within the component since there is no tab. Yeah.

Don Middlebrook 1:01:40 Mhm. Yeah, yeah. I guess my preference is that we would not have, you know, a ton of duplicate type images. We would use the one source image across all placements. So I guess that's something we have to figure out.

Daniela Tea 1:01:51 Yeah, understood. Yep. Yeah. So I I think and one thing I did want to mention is I know next week I believe we are according to counter, we are hoping to talk a little bit more about the dam. I realize that we're going to certainly want to make sure that we are identifying some of those gaps. Sounds like you know, Don like.

Don Middlebrook 1:02:02 OK. And. Mhm.

Daniela Tea 1:02:21 Renditions would be a perfect gap that we discussed as to how it would fit with the components. These are the exact things that we want to make sure are documented and captured in the gaps. Because right now here, yes, you do have the ability to set the image position. We also understand you might want to be able to have.

Don Middlebrook 1:02:24 Yeah, yeah.

Daniela Tea 1:02:41 Specific rendition that was made for this content frapping card, so it displayed that way. So yeah, that's that's the exact kind of stuff that we want to make sure is captured for that for that gap document.

Don Middlebrook 1:02:45 Right. And. OK. Yeah, let's talk about that during my session.

Daniela Tea 1:02:53 Yeah, absolutely.

Don Middlebrook 1:02:56 Thanks.

Daniela Tea 1:02:58 OK, Yep, sure thing. Let's see, where am I? I'm gonna close out on some of these tabs just so we aren't viewing things that are not relevant. OK. OK. All right. One thing I actually wanted to bring up as we're talking about job components is I know that there's been a lot of questions about, well, what if I can use this on say like another site? Is it locked down to say just the career site? You know, like how do these components work across different sites? And

I did want to show very quickly, for example, yesterday when we were talking about say, I'm sorry, two days when we were talking about like the. The jobs listing and the question was like, you know, I saw, I think I saw a question on the Confluence page that mentioned can that job listings component be used on like another site that focuses on on those specific jobs. And So what I just want to show is like this is an example of I'm going to show where I got this. There's an example of a hotel site, and so when I say a hotel site, what I mean is a site that is using the hotel sub theme. It's using a completely different experience fragment path right for the header and footer. It's hotel specific to this New York hotel. I'm just going to cancel. So I'm in a completely different location with an AEM from where the career site is located, which is down here in corporate and I had created just like a test page called K Careers KT. And I'm just going to hit edit. And so if I were to just add say like my job listings component and just ignore the way that this is looking right now. But what I want to show is that I'm able to use this component. I'm able to call it a repath. I think so. I guess someone must have put a UAT testing job here. That's why this is showing. But I'm able to use this component and then, you know, display it on other sites. So obviously like with like cleaned up data and such, this would only display anything that was within this New York path. Same exact features of how many cars you need, the button label, the default image just like we had reviewed. Previously, so I just wanted to make sure that you guys are seeing these components. When we say they're quote UN quote global, yes you can use them in other places. They will look slightly different based off where you use them because it's dependent on the theme. So in this case because I'm using this component. Within this New York hotel page, which is using the hotel theme. That's why the CTA's look a little bit different than they currently do on say on this page, right? So that's because it's theme dependent. But I actually am gonna pause here just to see if there's I see you got off mute, so I just want to give you an opportunity.

Mayte Eme 1:06:00 No, I was.

Daniela Tea 1:06:02 Has a question or anything?

Mayte Eme 1:06:03 Another question I was gonna say, even though they might look different because of colors or maybe a few styles, they still work right. They they wouldn't break or miss something. It's just styling. OK, OK.

Daniela Tea 1:06:11 Oh, right, that's correct. Yes, it's it's more of like a the themes are mainly for styling, right? And also when it comes to the actual, let me go back here again to the.

Mayte Eme 1:06:19 OK.

Daniela Tea 1:06:27 Homepage. So you would set the theme. You can see here New York and the theme is set on specifically for this New York page. If I were to go to my corporate site and my career site, I should see a different theme has been applied, right? So it's using the Hard Rock theme, so the theme is applied. At more like a root level and so then all the child pages inherit that theme as well as inherits the header and footer and the components can be used across these different sites even though they're in different locations and these should work as expected when it's configured.

Mayte Eme 1:07:03 But we couldn't, if I remember correctly, but we can't choose multiple, right? And say, hey, Seminole beam is gonna show from the six floor allocations. OK, OK.

Daniela Tea 1:07:06 Mhm. Can't choose multiple. Oh yeah. So that's what. Yeah, exactly. So that's why I did want to highlight. Yes, we recognize that part as a gap. I think we we called out a gap on Monday. But what I wanted to just show though is that this component we previously I know we were just following the careers. I don't think right now you guys.

Mayte Eme 1:07:15 Mhm. OK. Mhm.

Daniela Tea 1:07:28 Doing something like this in hotels because OK.

Mayte Eme 1:07:29 We did. We did for casinos. We had a page for Tampa when they were actively hiring in the expansion of Tampa Hollywood. We had a dedicated page listing all the jobs for only Hollywood, only Tampa. So this serves that use case of one-to-one.

Daniela Tea 1:07:32 OK. Mhm. OK, I see. OK, I see. Got it. Yeah. So so yeah, I wanted to see if there's actual specific use cases because I believe right now from what I saw it was mainly just linking out. But if the need does arise where you need to do that, you know again for specific sites, you do have that ability to do that with our components.

Mayte Eme 1:07:50 Mhm.

Daniela Tea 1:08:00 Yep, Yep. All right, so sorry, slight tangent, but I want to make sure we address something that I remembered seeing the other day. Any other questions about the content? I'm sorry about the promotions component and the promotions content fragment before I move on to some other items.

Mayte Eme 1:08:01 OK. That's good. Thank you.

Lisa Cardia 1:08:19 Just from me, I I could be jumping the gun. So if you were about to head this direction, sorry, what would be the step to see the page of this promotion card?

Daniela Tea 1:08:21 Yes. What would be the step to see the page of the promotion?

Lisa Cardia 1:08:35 So like the same way when we just did the events, we saw there was the fragment, the event calendar and the event detail page. So the promotion page now what like does this automatically populate a page? How do we?

Daniela Tea 1:08:38 Oh. Right. OK. Yeah. So, so in this case here based off of at least what I saw from the casino site, you are able to, you have to create a new page Lisa to be able to include, you know it's basically like a content page, right. And then you would link it here. So that way it would. Be accessible after you clicked on the CTA.

Lisa Cardia 1:09:09 But there's no, I guess, template for like, is there a promotion? I thought we had a promotion detail page in our Um. Options, but maybe I dreamt that.

Daniela Tea 1:09:19 Let's take let's take a look. I do not believe that there was one. It would be the open page template and then creating the content page with the additional information that's needed on there.

Lisa Cardia 1:09:32 OK, so we don't have.

Mayte Eme 1:09:33 Oh, so when you create that promo that you show us, that doesn't automatically create that the detail page you have to that?

Daniela Tea 1:09:42 So let's take a look at casinos and I like a real world example of a promotion that we're seeing right now. If you guys could perhaps guide me to a place that.

Mayte Eme 1:09:53 Oh, but not to go to a casino.

Daniela Tea 1:09:56 Uh. The name is better.

Lisa Cardia 1:09:59 Well, yeah, because it matters because somebody's a third party.

Mayte Eme 1:09:59 No, not any.

Daniela Tea 1:10:03 Oh.

Lisa Cardia 1:10:04 You can just do Hollywood.

Daniela Tea 1:10:06 Hollywood. OK, sure. Oh, oh, it must have. Where's it?

Lisa Cardia 1:10:10 Great. Yeah.

Daniela Tea 1:10:11 Oh, here it is. OK, Yep. All right. Yeah. Just wanna take a quick look to see how that's set up right now. And then promotions. OK.

Lisa Cardia 1:10:19 Yes. So there's the filter with the cards, which we seem to have similar, but then the learn more. This is where I was asking what populates this.

Daniela Tea 1:10:22 That. Mhm. I see. OK, um, let's. I let me go after this call, let me go down to the dev environment. So

just to be clear, I can keep in mind what we have here within stage. You know we have migrated over the sites that were for like rollout one or rollout 7. So there are some there's data. That's not in stage because it's not, it's not ready to go, it hasn't been looked at, et cetera. So I do want to pull up something that's down in the integration environment for casinos so I can show how that particular page is set up for any of these casinos that was migrated down in the integration environment.

Lisa Cardia 1:11:23 2.

Daniela Tea 1:11:24 We'll get back to you then on this specific details page when it's used with casinos. So yeah.

Lisa Cardia 1:11:30 Because like since we would have sometimes in this case for careers and a landing page from the promotion, I also saw on the promotion content fragment like there was the option for the the banner image. So it's like if we put that, where is that?

Daniela Tea 1:11:34 Mhm. Yes. Yeah, that's, yeah, that's exactly why I want to look at it from the casinos standpoint because since we're kind of using promotions, you know, not as like a promotion, but more to handle how these hiring events are, there are some fields that that aren't really used and they're not being applied.

Lisa Cardia 1:11:59 Mhm.

Daniela Tea 1:12:04 The way that they that they would be for a casino promotion. So let me get an example when it comes to actually casinos. So that'll be probably more filled out and more you'll be able to kind of see like how that maps one to one when it's actually used for what its intended use case was. OK, so like right now we're not using everything that's related to the casino's promotions because this is not a casino promotion, this is actually a hiring event. However, what the what the promotions content fragment does provide is the ability to display this similarly to how it currently is on the live site. That's the reason why we. We chose it, but we can look at an example, not today, but we can look at an example later when it's actually used with the intention of casino promotion.

Mayte Eme 1:12:51 Is there anything else or maybe the event template that allow us to link to another page like because we don't do it often, but we do have. Events that we mark as hot jobs or we have to explain more, even sometimes we have, I don't know, dealer university, right? Like for like craps or whatever, whatever. So we have to create these detailed pages for some of the jobs and it seems that promotions cannot do that.

Daniela Tea 1:13:17 So. So promotions. So with promotions, keep in mind, yes, you, I mean you can create links to pages. You can create a page separately like a a separate open page and put your details there and then you can link it within the content fragment here, right? But what I'm hearing Lisa saying is. Because the way that events work is because you have that event ID, there's only one event detail page and then it's passing all the information that's already within the content fragment model, right? Yeah, so.

Mayte Eme 1:13:48 Well, yeah, yeah. I was trying to find a walk around because honestly the we do it is so easy. We just created one and it gives you the part integrations page. Everything is tied together. So that's a redo for later. I was just trying to see. How we can do it what you guys have built already?

Daniela Tea 1:14:06 Yeah, so you can certainly do this with events, but keep in mind that some of like like this override text functionality is not available with the events content fragment. So if you do have like if you wanted this to have its own separate page, that would be that would make sense if you want to use your event component, sorry, the event content fragment. But you wouldn't. This wouldn't say every Tuesday 12:50 right? Like we saw in the calendar, it wouldn't say that it would be like whatever the Tuesday date is. And it would say 12:50 and then it would also list out the location based off whatever was linked. So that's why there are differences between events and promotions in order to try to get it to match as closely as possible visually to what we saw on the live site. That's why we chose promotions. Now if there's I guess like this is where like it perhaps it makes sense to include like that override field within the events and then you could use events for hiring events as well, right? So these are all the things that like we need to make sure is documented so we can identify that for the gap. Which components need that specific enhancement, right? So I guess right now, does this cover the workaround for linking this to an existing page? Right now, as it is, you can link to an existing page. I can click here and I can choose any page I want, however, to have it similar to how it is with events. Right now, that's a different content fragment.

Mayte Eme 1:15:39 Right. And just to make an idea. Oh wait, we don't even have a scheduling now, so it wouldn't be. We'll have to get creative and figure it out something.

Daniela Tea 1:15:52 OK, so let's let's move on though to a couple of other things that I had noticed on the career site. And then I did want to spend some time having you guys if there's any specific pages we wanted to take a look at. And perhaps investigate those components, but let's take a look at the video card component. This is used with the testimonials. What I'm showing here are two different variations of the video card component, depending on if you fill out specific fields. So I'm going. We need to open up this component. We can see a configuration here. This

has the ability to put the thumbnail. Right now you can see we have external URL. What we're doing is we are referencing a video that's within the DAM. However, if I'm not mistaken, I believe during the handoff of the site. It was mentioned that we do recommend from what we saw, the majority of videos are I believe in Vimeo, if that's correct. So the recommendation was, you know, if that's the intention to keep all the videos together, that should be moved to Vimeo and then this external URL would be replaced. With whatever that link is. So right now we are pointing to it. We're pointing to a video that was uploaded into the DM as an external URL. But moving forward, if you're trying to use external URLs, we would recommend the Vimeo link instead.

Lisa Cardia 1:17:21 So if it's Vimeo or YouTube, we just take the the URL path from the browser. That's what.

Daniela Tea 1:17:24 Mhm. That. That should be here, yes. Like you can see here this is referencing like the specific file dot MP4. Yeah, sorry, go ahead.

1:17:31 Yes.

Mayte Eme 1:17:36 Most of our business are in YouTube, so when you say we recommend, you know, so that's fine, OK.

Daniela Tea 1:17:37 On YouTube. OK. Oh, sorry. I think what we saw was like, we were seeing videos in Vimeo on other sites, other hard work sites. But you're saying YouTube, it doesn't actually matter Vimeo or YouTube. It's just since that's external. Yeah, yeah, you know, it wasn't like a limitation of that. I was using Vimeo because that's what we were seeing. Yeah.

Mayte Eme 1:17:49 OK.

Daniela Tea 1:17:56 OK, so in this case here what you will notice is I've left the video title and the description blank and so you'll notice in this version I'm going to hit cancel. There's nothing that's appearing underneath, but in this version here I did fill out the title.

Mayte Eme 1:17:57 Yeah.

Daniela Tea 1:18:12 And also the description. And so that's how it's being displayed here. So with with title and description without title, that's just depend on if you fill out those fields. The close button label is something that will appear when you actually open up the video and that's what appears in the top right in that Moodle. So, so that's here and then. Let's see. Let's take a look at how that looks like on the publisher side. Alright, so I'm just gonna click on like something like this. So this is where we were saying that the close label is appearing here. So that's where that translates to. And then for the Watch More

testimonials page, you can see here how we were using that video card component with the descriptions filled out. I'll pause here to see if there's yeah, go ahead, Lisa, please.

Lisa Cardia 1:19:02 Yeah, all right. I have a list of questions because I've tested this on my own. So we we definitely skipped around on a lot of the controls of the video. So if you went back to your external URL, so now that we know we can reference a video that's in the dam, Vimeo or YouTube, I saw you had a with it.

Daniela Tea 1:19:13 OK.

Lisa Cardia 1:19:22 There. Is that the recommended width or why do we have 846 there?

Daniela Tea 1:19:26 So I yeah, so I had I copied this specifically from the existing one that was listed here. Let's go ahead and change that and see what happens.

Lisa Cardia 1:19:38 And so we don't need like a pixel or anything there, it just accepts a number.

Daniela Tea 1:19:43 Let's do something small and crazy to make sure I believe with the let's see.

Lisa Cardia 1:19:50 I believe it only impacts the modal, but.

Daniela Tea 1:19:52 Yeah, that's that's what I was about to say. Like you can see how the modal got super small, right? And one thing I did want to mention is the videos do work when you're viewing them on the publisher. When when we're viewing trying to view like a damn video within the. Author. That's why you're seeing it's not, it's not going to play in here, but it is something that's visible when you're viewing on the publisher. But yes, so that width that we just inputted, you can see how that affected the modal window in terms of like the 8:46, that is probably something that we were putting to match whatever we saw on the live site, but that can certainly be changed. Changed.

Lisa Cardia 1:20:28 OK. But no pixel required, just the number. OK. And then moving down, unless you plan on showing us the third party, but there was the options to do a fixed layout instead of responsive. It was like there was like fixed layout versus responsive and I think that's if you choose.

Daniela Tea 1:20:30 No pets will require. That's correct.

Lisa Cardia 1:20:48 Choose the third party. You have these options like you just have very very different options than what had existed and then it it asks you for like a a aspect ratio, you know all of those natures.

Daniela Tea 1:20:50 Oh, right. I see what you're saying, yeah. So I think you might be thinking about the video component. So with the video card. Oh, no, I'm sorry. I apologize. You're talking about like after you select the. Yeah. So this is gonna be very similar. Yes, correct.

Lisa Cardia 1:21:14 This was from selecting third parties so.

Daniela Tea 1:21:17 Yeah, so with regards to this, you can see here the video ID. Let's switch to YouTube since you guys were mentioning YouTube. So the video ID is that the string or whatever that's at the end of the video, so that can be inputted here, right? So that way we would just reference that specific YouTube video here with the layout fixed or responsive I can. You can try and look for examples where we're actually using this so you guys can see how it works. So I can pull that off to the side and do that. But yeah, what this is showing here is you're able to add those specific. I guess you can configure it so that way it's looping. I believe we're using that on the homepage for example. Ability to loop this video for it to be able to play without being muted. It's auto playing, right? So that's what was used in order for this particular video to be shown. This is using a container. However, anything that's using a video is going to be very similar to these specific fields. That's why I'm. Referencing this, um, but these are things that would be configured by the author and then this. That's how it's like rendering on the page, right? So this.

Lisa Cardia 1:22:26 But those options are only available if we went with the third party.

Daniela Tea 1:22:29 If you click on third party, yes the video.

Lisa Cardia 1:22:32 So we can't do that. Like I guess I don't understand why we would put a YouTube link on the external URL with the first example when this is asking for YouTube as a third party.

Mayte Eme 1:22:33 Oh.

Daniela Tea 1:22:41 Yeah, so so to be clear, external URL could be if it's something outside of what's listed in here, then that's when you would use this. You can't. What I'm trying to highlight is yes, you could theoretically still use a YouTube URL here. However, when it comes to. Additional features, then yes, it could certainly make more sense for you to be able to select YouTube from the third party drop down if you want to have access to all this additional stuff. However, if your videos were not hosted on YouTube, external URL is what is available for anything that's not hosted outside of these.

Lisa Cardia 1:23:17 But we couldn't do this the configurations with like a hosted internal video. Sorry Mayte.

Mayte Eme 1:23:18 So.

Daniela Tea 1:23:22 Into the.

Mayte Eme 1:23:22 No, I was going to say the same thing, Lisa. It seems that with external we missed the configurations that we have on third party. They should be the same. So that's another gap and that means that we only have to use YouTube or Vimeo their private.

Lisa Cardia 1:23:32 Yeah.

Mayte Eme 1:23:40 Otherwise we won't have controls.

Lisa Cardia 1:23:45 Yes.

Mayte Eme 1:23:48 So OK, yeah, so let's just not use external URL until that's fixed.

Lisa Cardia 1:23:53 And then yeah, definitely a take away to let us know that if we were to use the fixed or responsive, what like our best practices for those like fields that are included. But if you don't have an example now, I don't want to waste the time. And my only other question was related to styling. So if you were you showed us how they looked on on the preview, but just to see the difference between.

Daniela Tea 1:24:02 Mhm. Mhm.

Lisa Cardia 1:24:13 None black and white is none is the default. So is that transparent I guess?

Daniela Tea 1:24:15 Oh, right. So let's actually, I'm going to just copy this three times and I'm going to just put a background color on just for the ease of us being able to see this, right? This looks absolutely terrible, but let's. Let's set this to be white. Let's set this to be black, and let's see what happens here. Oops, did I set that white? Interesting. All right, so here you can see the black is showing up on on top of the container with the background color, and so it's not transparent. The white one I'm going to look into because I feel like I have seen that working. I'm not sure what's going on here, but the intention is for this to be a white background. Right with the light with the dark text on top of the light background and then I think by default nothing is selected. And so once we check to see and understand why white description is not showing on the background as white, I can get back to you as to whether or not this is transparent or not, cuz right now it's showing as transparent, but I need to. Confirm what's going on with the white description.

Lisa Cardia 1:25:28 OK, I've gotten the white to work before so I have seen it in action. I just I just don't know if if not selecting means default is transparent.

Daniela Tea 1:25:31 Yeah, that's that's what it exactly. That's why I'm surprised by this. Right. No, definitely understand. But yeah, let me look into this, Lisa, because like I like you're saying the white should be working. I'm not sure why it's not working right now in this instant. But yes, I can show a screenshot of actually of the of the three different ones once I can understand why this is. View uh displaying those this way.

Lisa Cardia 1:25:57 Thank you.

Daniela Tea 1:25:58 Yep. Um, OK. So 'cause I'm seeing the time I did one. Yeah, go ahead.

Mayte Eme 1:26:03 Um. One more question, we how does this work with this component? If I had a fourth one automatically turns into a carousel like sidecore? Or is there an extra step to make it agree, agree that it stacks or a carousel? Because we just got to like click one thing in sidecore and I didn't see that in the settings.

Daniela Tea 1:26:23 Yes. So this particular component it it's.

Mayte Eme 1:26:24 Yeah.

Daniela Tea 1:26:29 So it's one component that does not automatically go into a carousel. We do have like card carousels and we have our hero carousel which does allow you to, you know, do things like add other components to them and and so let me actually show you. For the video card though, I don't believe that's something that we are currently adding to carousel, so it might not be an allowed component. Yeah, so in this case for the card carousel, we had limited just to cards for the. Hero carousel that was limited to. I'm sorry, one second. Let me get out of the carousel component. Yeah, for the hero carousel component. I believe we had limited that to just hero banner image and video. So notice this is not the video card component. This is a different component. The video is more of a video player. That's what we see here. This is the video player being used within a hero banner. So right now the video card component on its own. It does not turn into a carousel. What what I would recommend perhaps is like say like a gap is with our existing carousel components, perhaps allowing those video card components to be added to them since right now they are limited to only specific components and that was by design.

Mayte Eme 1:27:51 OK, so yeah, let's component turns into carousel and obviously everything right, like navigation and things like that. But any any card can go into a grid that is taxed and is responsive or turns into a carousel if that's configured when more than you know, three or four,

whatever the.

Daniela Tea 1:28:08 Mhm.

Mayte Eme 1:28:09 The um, I think I accepts.

Daniela Tea 1:28:15 OK. And so the the last thing I wanted to to just show before we start, if there's anything else that we need to pull, which is that I also noticed that for this particular site we were using the card component. And again, that's been used obviously everywhere throughout all of the sites. But in this particular instance, this card, what I just wanted to highlight, you can see the title bonus programs and you can see the asset here. This particular card is just using the icon card variation. That's why it's displaying. Like this, if I were to turn this off, it'll look something like that, which is not what was matching on the live site. And so I just wanted to highlight how this particular variation was being used on this site with the cart component that I know that the authoring team has already used in several places.

Mayte Eme 1:29:07 And if I add again like I'm not gonna ask about the carousel, but how does it respond if I have like 6 or 9? Does it go like 3 to 1 columns? I mean automatically or is that a setting? Because I remember from when we looked at the other sides we have that issue right that you have to manually go into every little thing and configure how it looks on each break point.

Daniela Tea 1:29:28 Right. So for this particular component, because keep in mind this is kind of like a standalone component, like you could make this as wide as you wanted, you can make this as small as you wanted. And then with the way AEM works, you would basically have to change it in the different emulators. Now what we understand and definitely understand what you're describing my table. I know some of our components will automatically do that for you based off of like say like a carousel. You have the ability to be able to say all tablet carousels. I want two cards to be displayed, etc. That's some of that functionality is built in existing components, but something like say like a card that's. A standalone component. It's not being used within like this carousel and so this here you would have to manually size it depending on how you want it within the different viewports.

Mayte Eme 1:30:22 OK, so we'll add to the God list.

Daniela Tea 1:30:26 OK. So with what we covered here, excuse me, this is was I was going through the career sites. I know we want to focus on careers and I was just taking a look at at the things that we have on the careers that we hadn't really talked about. Is there any specific page that the team wanted to take a look at and perhaps take a look at? Configuration and talk a little bit more about it.

Mayte Eme 1:30:49 We have a page where we list our executives. I think I forget the page, but that is the same content as that we have in hardrock.com, right? Like the brand side. So I'm assuming that shirt, right? If we change it on.com careers automatically.

Daniela Tea 1:30:56 OK. Oh. OK.

Mayte Eme 1:31:09 Updates.

Daniela Tea 1:31:11 So it can't. Sorry, what? Maybe it's here from our team. No, that's that's not it.

Mayte Eme 1:31:12 I'm gonna try to find that, yeah. Any inclusion?

Lisa Cardia 1:31:18 Yeah, I was gonna say it might be the diversity.

Lyon, Rick (Director of Digital Experience)** 1:31:18 It's the corporate page on hardrock.com.

Lisa Cardia 1:31:21 But the one that's uncovering yours, which one is it here?

Mayte Eme 1:31:22 And it's.

Daniela Tea 1:31:24 Oh yeah, I'm looking for the one in careers, so um.

Mayte Eme 1:31:27 I think inclusion.

Lyon, Rick (Director of Digital Experience)** 1:31:27 Oh.

Lisa Cardia 1:31:27 Yeah, I think it might be the diversity, equity and inclusion. Yeah, yes. So these are the same cards.

Daniela Tea 1:31:29 Question. OK, perfect. OK.

Mayte Eme 1:31:31 Yeah, that one. So we don't have to maintain it in two places, right? If you know like Jeff gets another title, it just automatically it's on both sides.

Daniela Tea 1:31:40 So right now I believe it was probably migrated over separate cards. We can take a look. However, that can be changed, but let's pull up this page. I think we said divert. Wait. Oh, inclusion. OK.

Mayte Eme 1:31:59 Inclusion.

Daniela Tea 1:32:03 OK, here it is. Got it. All right. I believe right now these are probably using card components, right? OK, yeah, so these are using card components. However, keep in mind these can be moved to experience fragments. Definitely understand the desire to have that shared content. Let's. Bring up the Hard Rock website and I'm. Is it corporate? Is that the like the corresponding? OK, yeah, OK, so.

Mayte Eme 1:32:32 I think so.

Daniela Tea 1:32:37 Oh, looks like some images are a little bit different. Not sure if that's intentional or not, but if what's pretended is a one for one, it's completely the same, right? Let's pretend it's completely the same. What we could do, like what could be done? Get this be shared and you can be moved into Experience Fragments

instead. So that way you are updating it in one location and keeping the exact same styling for both sites. So if you were to upload say the text here, say David like you mentioned got a new title or something, you'd update it in the Experience Fragments section and then it would update on. Our page was referencing that experience fragment. So this here would be moved to the experience fragment. This here would be replaced with the experience fragment. So it's using that shared source and then you as an author would just update it once. Does that make sense? So right now, as you can see here, these are using just cards, just like these are likely using just cards or or some other components, but if the desire is to have it to be shared across both sites with the exact same styling. And the exact same like data, then that is a perfect candidate to be moved to an experience fragment instead.

Mayte Eme 1:33:57 When you say exact styling, just to understand how Adobe works, if I do an experience fragment and I want the same content on two or multiple sites, it has to have the same styling. It can be it's the content the same but the style apply different per site.

Daniela Tea 1:34:09 So. Yeah, so keep in mind. So that the reason why I was emphasizing the styling is because that's when experience fragments, you know, having it look exactly the same and and with the same content. However, if you're just trying to have the same content, that's where it goes candidate for content fragments instead, right? That's why I wanted to understand like. Like, are we trying to have like, you know, because I notice, you know, pictures a little bit different. Not sure if that's intentional or not.

Mayte Eme 1:34:36 You. For this use case, like you're right, it should be the same, exactly the same. I was thinking of already other use cases where they are not exactly the the content is the same but not how it looks.

Daniela Tea 1:34:43 OK. OK. Yeah. OK. Yeah, yeah. So whenever you're trying to have shared content, say a name, we know that we have a name and we have a title and we have an image, right? That is a content for a, sorry, that's a candidate for a content fragment model. Say those exact fields where you're able to then save that into that location and then. Edit it as a content fragment. You would then use like our content fragment card component to to display that specific content fragment, right? However, because we're saying I want this to be the exact same on both this site and this site, that's to be done inside a content fragment. That's not like an experience fragment and then you would edit. One experience fragment and then it would update on both sites.

Mayte Eme 1:35:34 OK. Thank you for that.

Daniela Tea 1:35:36 Yeah, and I'm sorry if that was a little confusing. We can certainly get more into experience fragments, which is the intention in a future session, you know, kind of seeing examples of where we are using experience fragments on existing sites as well as perhaps some additional use case candidates that that would make sense. Like this is a perfect use case for experience fragment. We're trying to do the exact same thing, but that is going to be covered. I believe if not next week, the week after I need to check the agendas. So just to be clear, we are going to be talking more about experience fragments.

Lucas Nelson 1:36:08 Yeah, Daniela, one of the things we'll do tomorrow is send out what what the agendas are now that we've kind of amended the plan, right. So, yeah, so that'll be something I'll see tomorrow, yeah.

Daniela Tea 1:36:19 Oh, yes. Yep. Mm-hmm. Yeah, we'll be working on that tomorrow. That's correct. Yep. So I think might say in team, any other pages we wanted to take a look at that's in careers, you know, perhaps take a look at behind the scenes as to how we are rendering it.

Lucas Nelson 1:36:23 Yeah.

Lisa Cardia 1:36:36 I do want to, I I know I sound like a broken record for probably a lot of the components we've covered, but I do want to call out that like for the video card or for the promotions or everything of that nature, I will document again to say what is the asset necessary for this because like for the video card, I think that there was like.

Daniela Tea 1:36:45 Mhm. Mhm. Yes.

Lisa Cardia 1:36:56 Like a the or I forget the the word you used for it. I'd have to go back to my notes. Let me see video card thumbnail, the thumbnail. So it's like what? What size is necessary for the thumbnail? I know I just saw like a recommended size you put maybe for the video, but like.

Daniela Tea 1:37:06 So I get the the the yeah, the video thumbnail.

Lisa Cardia 1:37:14 It's not really universally understood what would be necessary for that image right there. And then same thing with that image. A video card doesn't have the same capability of where we were able to like give it a focal point I guess. So like to me this one would be important to just know what's the aspect.

Daniela Tea 1:37:19 Yes. Mhm. OK.

Lisa Cardia 1:37:31 So that there's no mess ups there. Um. I'm trying to think what else. Obviously same goes for promotions, just wherever there was like a a banner image field or a promotion card image. Just knowing again the the basis that's really gonna get us in a standardization. Good point. You know, just at least implement that from the as we are dictating what the card looks like versus the card containing in.

Daniela Tea 1:37:51 Yeah, yes. About the assets and we want to continue putting that down, you know, from a component basis. We understand that the fact that this does not have like say like an image tab or something new feature. You know, documenting all this on process to review during that.

Lisa Cardia 1:38:34 Yeah, and it kind of like an overarching theme. Updates to pages and I'd say this might not be as relevant to the content fragments because I can see how they're stored in the back end and either published or unpublished. But we're having a lot of issues when we want to have something added to this page. Let's say it is the video card.

Daniela Tea 1:38:49 Mhm. OK.

Lisa Cardia 1:38:55 If we want to keep that another video card on the page, but someone tells us George isn't with the company, take it down, but then we want to. I guess that's not the best example. George isn't coming, is coming down this week, but we want to add George back next week. It's a pretty big effort to create it, get it sized, get it formatted and delete it versus at least storing it. On the page level, maybe hidden on the back end. Do we have any sort of functionality like that? Because we come across that with like the homepage heroes that constantly get rotated out. Sometimes we'll have something very temporary go up, but we want to revert back to Evergreen and not just make like a. It's more so being able to go to basically the component level and get it stored to the page, but it's not saved on the actual page layout, but more so in the content tree, so we can always access it from the tree if necessary. I I know we do that a lot. And then without having to say what did that look like, like do we need to recreate it? I hope I'm like saying that correctly because that's like most components that we're having an issue with of like what we do currently day-to-day. It's really easy for us to grab things that are just more so disabled or unpublished from the component level.

Daniela Tea 1:39:55 Mm.

Mayte Eme 1:39:56 Mm.

Daniela Tea 1:40:05 Mm.

Lisa Cardia 1:40:12 but still stored in the tree.

Daniela Tea 1:40:12 Mhm. OK, yeah, I.

Mayte Eme 1:40:15 And then, as you know, we do that for everything, for pages, for vans, for promotions, for cards, for literally everything. We just leave them there because we know we're gonna reuse them.

Daniela Tea 1:40:21 Yeah. Yeah, understood. Um, So what I wanted to actually show.

Lisa Cardia 1:40:28 Yeah.

Daniela Tea 1:40:33 We'll see. So there's promotions component that's on here. However, you'll notice that it's actually hidden. What I did was I had layout and it's. You'll notice that there says hide component.

Lisa Cardia 1:40:50 Oh, OK.

Daniela Tea 1:40:51 I believe that's what you're asking for, Lisa. So like. OK.

Lisa Cardia 1:40:57 It. Which? Something like that exist. I just would hope that that I exist in every component or is this like?

Daniela Tea 1:41:02 Hello. I mentioned perhaps a specific card with it. This is at a component level like this particular feature on this. I did a link on the layout and I clicked on the eye and what that does is that. We'll hide component from. Or like you know this, this would come in handy to be able to dictate what's actually shown in a different device. But what it sounds like you're asking for is so you wanna hide on every single device. Well, you can actually do that by using this the same functionality just hiding the component. But it would still be accessible to tree so you can see I had hidden my title permissions. If I click on it you are going to see it because it's hidden, but when I if I go through the layout I'm able to actually unhide. I did again, right?

Lisa Cardia 1:42:10 But it would have to be done across break points.

Mayte Eme 1:42:10 OK, so that's one like a CSA's hide. It's still rendered right? And like you can get crawled and picked up. So it wouldn't have a use case because when we hide it in cycle, it doesn't get into the HTML, it's actually gone. So that's.

Daniela Tea 1:42:29 Let's see. Yeah, one second. One second. One second. Let's take a look at.

Mayte Eme 1:42:32 You can go.

Daniela Tea 1:42:39 One second. Let's take a look. Yeah. So to Majay's point, like you can see here, the title is still. Yep. Sorry, Majay, you're you're breaking up. What? Sorry, what was that?

Mayte Eme 1:42:43 And also we have to. Sorry, I was gonna say that the amount of that we have like let's say disable or unpublish, it's not the amount. So hiding, hiding like that, it's it's not. I mean it might help us Lisa for like a quick fix for something really urgent, right? But it doesn't have. A long term.

Lisa Cardia 1:43:07 Right. I didn't know it was gonna be like in the code.

Mayte Eme 1:43:12 Yeah. Because it takes so much manual labor and energy to create something in Adobe, we don't want to lose those components. That's why we're asking if we can like store them somewhere so we don't have to recreate it and spend all the time to accomplish, you know the.

Daniela Tea 1:43:36 So it's yeah. So out of curiosity I guess let me because I'm I'm trying to like process the use case. So it's a concern like I have an entire layout and now it's like I need to hide certain things.

Mayte Eme 1:43:36 The look that we.

Daniela Tea 1:43:55 Are you guys talking about perhaps you know like?

Lisa Cardia 1:43:57 The the use case could be for example we we push a hero banner to a page and and the campaign that we're running or push like for a hiring event. And when we don't have a. We might want to swap that back out to generic, but the generic is set up with a description, not just like a like zero. So there's already like.

Daniela Tea 1:44:15 OK.

Lisa Cardia 1:44:31 We want to like reset up knowing it's just like an Evergreen content, but we don't necessarily have like scheduling either to say it's going to be following a very consistent schedule to say make it appear on XY and Z date. It's kind of like at the request of a stakeholder. So we won't, we wouldn't. We just want to have that evergreen content available to repurpose in a lot of areas. But that's like my best case to say.

Daniela Tea 1:44:52 Mm.

Lucas Nelson 1:44:54 Can you? You know is that. Sounds target a little bit, but maybe not. I don't, I don't know, you know, maybe if there was a.

Daniela Tea 1:45:02 Yeah. But.

Lucas Nelson 1:45:07 We if we change the the content architecture too, but I'm just trying to. That's what I'm hearing. Yeah, you go ahead.

Mayte Eme 1:45:15 OK.

Lucas Nelson 1:45:29 And.

Daniela Tea 1:45:29 Yeah, for sure. And so I I understand the use case that you're describing, Lisa. I think we need a little bit of time to kind of digest that and also some time to sync with the tech team tomorrow to see if perhaps, you know, they have some suggestions as to how we could handle that.

Lisa Cardia 1:45:45 Yeah, cause just like as we're evolving as a team, part of our initiatives this year have been really to to emphasize like content refreshness. So like so in order to do so we we're rotating out very temporary things, but when we don't have temporary things to to push then we want to be able to rely.

Daniela Tea 1:45:48 Mhm. OK, OK.

Lisa Cardia 1:46:05 Back on the Evergreen. So it's not like, as easy to say, we're always following a very standard schedule. So like, I don't think it's just as as much of targeting at a time being, but being able to default back to saved elements that aren't just fragments.

Daniela Tea 1:46:10 Go ahead. Hmm. OK. All right. Yeah. No, we we will be reviewing this tomorrow during our discussion. See if we can.

Lucas Nelson 1:46:32 Well, either way, I think I don't know if we'll have to be an answer, but we're hearing the need as part of this like initiative and vision that Lisa.

Daniela Tea 1:46:33 I'm hoping last of these days. No, no.

Lucas Nelson 1:46:43 Sent their team, you know, refreshing content. That's good to hear that like kind of anecdote at least I can. So my point is I don't, I don't know if an immediate answer but we but we definitely want to consider that when we're talking in going through our backlog expansion platform expansion discussions. So we're accounting for that with any future work that we're doing to improve the plat. Form as it's implemented. So yeah, alright.

Daniela Tea 1:47:09 Yeah, yeah. Luke, I guess what I was trying to stress was if there is something that we can do currently today with the platform, we would, yeah, certainly, yeah, certainly we want to present that. But to your point, after our discussion with our tech team, that might have to be, you know, either like a modify or or something that's completely new. So yeah.

Lucas Nelson 1:47:14 Oh, sure. Yeah, yeah. I don't wanna shortchange that. Yeah, yeah.

Daniela Tea 1:47:29 Yeah, we'll definitely learn more after we talk tomorrow and then we can certainly cover this again in in in our later. Yep, exactly.

Lucas Nelson 1:47:29 Yeah. OK. Figure out where it goes. Yeah, right. Yeah. OK.

Lisa Cardia 1:47:38 Thank you.

Daniela Tea 1:47:39 Yeah, thanks, Lisa.

Lucas Nelson 1:47:39 Daniela, I I feel like you're you're you're you're about out of words here, but our team are there.

Mayte Eme 1:47:39 Um.

Daniela Tea 1:47:44 My God.

Mayte Eme 1:47:44 I we I do have one last question. The locations page in the careers site is pretty much the same information as the brand site. So I'm assume that's the same right? Careers is pulling from the DPLD.

Lucas Nelson 1:47:48 No problem.

Daniela Tea 1:48:00 Let's take a look. I believe this is actually not pulling in from DPLT. Sorry, I'm just sharing the screen. You're talking about this page here.

Mayte Eme 1:48:09 Yes.

Daniela Tea 1:48:10 And this is the same page. Let's find it on the Hard Rock website. One second. Um, can you navigate me to the?

Mayte Eme 1:48:22 Yeah, go to find the location top left in the in the belt on the top. Yep. So if you scroll below below, that's obviously organized differently, but it's the same information. So if we have the same information.

Daniela Tea 1:48:25 Oh, Yep, sure. OK. So.

Mayte Eme 1:48:37 I assume it was the same component.

Lucas Nelson 1:48:40 Mm.

Daniela Tea 1:48:41 No. So I believe the way that this is migrated is using accordion and text components. This here is using a different component which is connected to the map. I guess my question for you though is like is the is the intention for it to actually be organized in this way to essentially reuse what we see here?

Mayte Eme 1:48:59 Not organized, but the idea of integrating with the DPLT is that everywhere we have a listing of locations like that pulls from the DPLT, so we don't have to maintain it in different places. We don't want to be maintaining locations, their links, their name changes and all that stuff. Manually across multiple sites as we keep adding sites to this. So is are we able to grab that accordion from the brand side and put it, not move it, but copy and have the same in the career side?

Daniela Tea 1:49:32 So you can certainly copy the component. I do believe this component is linked to the map, but we can.

Mayte Eme 1:49:39 But that's fine. We can have, we can have the map.

Daniela Tea 1:49:43 OK, uh, actually, but I'm one second.

Mayte Eme 1:49:48 I mean, to be fair, they actually wanted a map the first time we did it. We just didn't have enough resources to, you know, like actually do that work. So we ended up doing just unlisting in Accordions.

Daniela Tea 1:49:59 Right. So and and I think that's the reason why it was probably migrated over that way. But if we were to go to the, excuse me, locations page here, we can take a look at what that component is. To your point, Mayte, you're saying, can you just copy it? So you'll see this is our map component and the reason why you're like, why is it a placeholder? If it renders an author, it's probably going to slow down the page significantly. However, this particular component contains all the different map data, right? You'll see the different group titles, et cetera, and then it's pulling in the different countries, which is then this particular component is linked to the content fragments that are being created from DPLT, right? Right, so you could take this, you can copy this and then you can put it on the page. Right now I'm gonna put it just on my test page because I don't know the exact page where it's there. Oops, my bad.

Mayte Eme 1:50:49 Mhm.

Daniela Tea 1:50:53 Yeah, so you should be able to copy the component and then display it within a different page because again, these components are global, right? So yeah, yeah, yeah, let's see if I why does it keep copying this?

Mayte Eme 1:51:02 That's good.

Daniela Tea 1:51:09 I'm going to do that and then I'm going to actually because I see a time, but I'm going to do that. I'm going to post it here and I'm going to actually ask Luke to send out the page once it's available. OK, if that's if that sounds good, so you guys can see how it's the exact same copy of that specific component, OK.

Mayte Eme 1:51:17 OK. Yeah. Thank you.

Daniela Tea 1:51:26 Alright, yeah, I will stop sharing then. And Luke, yeah.

Lucas Nelson 1:51:27 It. Yeah, I I got just a couple minutes and then I'll let people go. Just pulling the calendar back up and again, this is published on on Confluence. I'm sharing my screen, hopefully you see it. So just wanted to call out that. Tomorrow's session I I had the intention of having the Friday session this week. We're gonna we're gonna postpone it and and move sessions

to next week and have a Friday session next week. We we want to have a a pretty large post-mortem. Internally here, retrospective and and use the time to collate what what we've, what we've gone through the last three days, go through the questions that you guys have had, make sure we have a buttoned up agenda for next week. So that's why we're going to use the Friday time for that. So you'll be seeing a calendar update from me for the Friday session tomorrow and I'll be sending, well, Daniela will be sending. Well, actually it'll be a mix of Daniela and Andy will be sending the agendas for next week and I'll be setting up the time blocks. The one to three time period Tuesday through Friday and just want to let everybody know this that that little bit of housekeeping for me. So hopefully that makes sense. That's all I had. So thanks for your time Daniela, as always, I appreciate. The diligence that you put into these knowledge transfer sessions with everybody, I appreciate everything you're doing, OK.

Daniela Tea 1:53:02 Sure. Thank you.

Lisa Cardia 1:53:05 Thank you, Daniela.

Daniela Tea 1:53:05 Thank you everybody for your participation.

Mayte Eme 1:53:06 Thank you.

Don Middlebrook 1:53:08 Thanks.

Lisa Cardia 1:53:09 Thank you.

Scott Sorel 1:53:09 Yeah. Excellent. Thank you.

Lyon, Rick (Director of Digital Experience)** 1:53:11 Thanks everyone.

Mayte Eme 1:53:11 Thank you.

Gonzalo Calasich (SHRSS)** 1:53:12 Thank you. Bye.

Lucas Nelson** stopped transcription

Session: Tagging & Taxonomy — 2026-02-17

SHRSS Adobe Knowledge Transfer - DAM Sessions-20260217_130312-Meeting Recording

February 17, 2026, 6:03PM

1h 2m 28s

Lucas Nelson started transcription

Lucas Nelson 0:08 Alright, we're off and running on the recording. Andy, if you wanna go ahead and brief the team on what today's session's gonna be about, that'd be great. Thank you.

Andy Lambert 0:17 Sure. So for today's KT session, we're going to talk about all things tagging and taxonomy as it pertains to tags and AEM. So it's actually this. This session will not be 100% or even close to 100% focused on the damn, though I think that it's critical that Don be here as well as your authoring folks and anybody else that would be have an interest or stake in understanding how tagging works as it applies to both. Both sites and offering. So if you wanted to, you know, forward the invite or just shoot anybody a quick message on teams to have them join them, you know that would be. Recommended sure, but we'll also have the recording, so anybody that wants to go back and and check it out can. Now do we do we want to take a minute to invite anybody else or can we go ahead and get started?

Don Middlebrook 1:15 Thank you.

Lucas Nelson 1:21 It's up to you, Scott. I think we'll just go ahead and get started here in silence there, Andy, OK?

Don Middlebrook 1:32 Yes.

Scott Sorel 1:34 Yeah.

Andy Lambert 1:34 OK, sounds good.

Scott Sorel 1:35 Yeah, sorry, I was muted 'cause you press record. Let's go.

Andy Lambert 1:37 Yep. Alright, so I'm gonna share my screen and kick us off. Let's see if I can do a whole application. No, it's not. Alright, so I maybe go back and forth between sharing some, you know, individual. Um. Things I have open. So we'll start actually, yeah, this gives us a good overview. So this is taken from the confluence page that just lays out the agenda for today. So we're going to be talking about and I did put a note in here that the objective for today is to and it's just taken directly from the associated. Ticket for this particular enablement track. The objective is to understand how tagging, metadata and taxonomy are implemented and how they drive dynamic content, search filters and cross-site behavior in AEM. And so we've broken that out. I did put one note that. We're going to have the dam focused session tomorrow where we bring in a subject matter expert, Chris Lewis, who has some familiarity with the project going back to the early days and also is an expert in all things custom metadata schemas and best practices around that. So and and the other agenda items we have lined up for tomorrow. That said, there will be some crossover. I'll, I'll touch on you know some critical differences when you're thinking about tagging versus what the

difference is really between. Tagging in a EM versus the concept of metadata schemas and custom metadata fields and things like that. So we're going to get into tag taxonomy, which is basically talks about how tagging was implemented or I should say put into place and structured for this implementation. Tag management, some best practices around governance and some permissions and things that we can set up that can be set up so that you have granular control over who's able to. Add, update, delete tags and then we'll talk about the application of tags and authoring and asset management. So we will touch on assets there. We will in that area talk about how there are certain asset metadata fields. Fields in your schema that are populated from tags, so there's some crossover and functionality there. And then we'll talk about tag performance considerations and troubleshooting and some of the other call outs that you guys had in the JIRA ticket. I'm gonna stop sharing that for a second. This is the one that I wanna talk about, so um. And the first talk about tag taxonomy and how it was configured for this implementation. Before I get started, any questions on the agenda or any call before we get going?

Don Middlebrook 5:00 I don't have anything at this moment.

Andy Lambert 5:01 All right, all right, so. You know what? I'm we'll talk through this a little bit and then I'm actually just gonna share my whole screen. But look, if you ping me on tag on Slack, I'm not gonna see it. Heads up.

Lucas Nelson 5:17 No problem, Andy.

Andy Lambert 5:25 Free wheel on it. No, no training wheels, no loop. No look on the back end saying no, no, don't.

Lucas Nelson 5:33 I I have faith in you, Andy.

Andy Lambert 5:35 All right, that's it. That'll be your demise, buddy.

Lucas Nelson 5:39 Yeah, probably.

Andy Lambert 5:42 Alright. Oh, can you guys see my screen OK?

Lucas Nelson 5:48 Yes.

Don Middlebrook 5:48 Yes.

Andy Lambert 5:49 I'll take that as we're good. Oh, the reason I shared my entire screen is I want to be able to hop back and forth. I'll try not to do it super quick or scroll a lot, but I want to be able to, you know, demo as in context. So your taxonomy route, I'm not sure if you're familiar, but in AEM. Um. On to move that guy 'cause we'll be referencing that later. Tags are managed in AEM through a tags console. I'll step back for a second and go back out to actually just that we have it for the sake of the recording. So let's say you're coming in as an author and you land on the the start page for the touch UI also. Refer to as the granite interface. You click on your tools icon and

it's over here under tagging and you can see that there are several the top level of tags in AEM or and in general in the tagging world are called namespaces. So some of these are out-of-the-box. This is used for multi-site manager or translation functionality in a EM. You've got some asset properties that are out-of-the-box like portrait, landscape, square. Files. You also have variations on experience fragments that are out-of-the-box where we get into and then some tags that are used for various workflow processes like site and AEM projects and so forth. So where the rubber hits the road with you guys is we have a namespace called SHRSS. You can see it in the console and the. The actual path in the JCR is under the hood is forward slash content CPU tag and then your namespace which is SHRSS. And so here you can see that there are tags set up for. Your regions, brands. Hotels, some of these are in use currently and some of them are not. Some of them are set up for the additional site that would be onboarded. Maybe they got started and were paused or or for whatever reason are I'm looking at production. So we currently we're looking at production tags. You got your lines of business news categories. And underneath these you have, you know, more granular levels of the taxonomy, for example featured news. And just to show an example of where, for example, featured in addition to tagging an asset or a page or other resource in a experience fragmentation. Fragment content fragment. You think about back in the old days there was that website Delicious where it was just one great big tagging cloud where people could tag content with any descriptive tag that they could think of to create this massive cloud taxonomy. You have that ability in AEM in a governed way to and we'll talk about the governance that's in place currently for your tags or tagging schema, but you can in AEM tags are also used often to drive things like drop down menus for authoring component properties. Or or even specific asset metadata fields where when you're choosing, when you upload a NASA and you're applying metadata, you want to have governance over a finite set of options to describe the. Um. I don't know pick anything really the the the category of for the asset. That's a greatly a great example for your content. Fragments are based off of categories. categories um that get applied. And I'll show an example of that shortly. But for news categories, an example of that is featured news gets used to populate the blog page on hard drop. So if we go I was just there. Where's news guys?

Lisa Cardia 10:30 Down to the bottom, there's a section that's gonna land.

Andy Lambert 10:33 Yep.

Lisa Cardia 10:34 That'll land us right. There's a direct link to the yeah.

Andy Lambert 10:37 Perfect. Perfect. So yeah, so we have under here we have news. And then this is where I'm not. You can see I'm still coming in and getting familiar with your your architect, your content architecture. But I think the latest items you could see that there is the Seminole Hard Rock Hotel and Casino Hollywood.

Don Middlebrook 11:09 So are these the tags that are applied to the modules on the page?

Andy Lambert 11:11 Yeah. Correct. So so for for this card list, for this section of the page that we go preview, I can say OK, so that's featured news. I go back to edit. The content that shows up under featured news is driven by the content fragment card list component.

Don Middlebrook 11:16 Oh, brother.

Andy Lambert 11:38 And is based off of the type of news. And somewhere on the hood that's driven by and select the list type. Is tags and then it's set up to the to come from featured news. So that's how that's component knows where to pull and news items from is basically they're all tagged with featured news. That makes sense.

Don Middlebrook 12:01 Amazing. Yeah, that makes sense. I guess one thing I wanna talk about with those tags, if we can go back to that page where where you show all the list of the tags.

Andy Lambert 12:17 Sure. Mhm.

Don Middlebrook 12:23 So right now and I I brought this up before. So we have you know under the first level underneath the SHRSS we have directory called categories, we have directory called category, then we have news categories, we have events categories, so.

Andy Lambert 12:38 Hmm.

Don Middlebrook 12:42 Can you maybe explain why we have several sets of categories? Maybe why those aren't all maybe not all nested under cat one directory?

Andy Lambert 12:53 Yeah, and they I think that they serve, they they serve different purposes, but they could be named a little better, right? So so that as you're reading through this as a human that it would not be so because that that actually just caught me when I was describing that your content fragments use category and I was.

Don Middlebrook 13:03 Yeah. Yeah.

Andy Lambert 13:12 Pointing to this folder, it's not that they're actually driven by this is the the field that populates. So I think that that comes into play. We'll talk about best practices for naming here in a little bit and I think that we can add that as.

Don Middlebrook 13:16 Right. Mm-hmm. Yeah. Yeah.

Andy Lambert 13:28 As a to do you know for you guys or at some point you know to to do a little bit of clean up and refinement of the tag structure.

Don Middlebrook 13:30 Right. Yeah, definitely, definitely want that. And the same with the property names because we have all the locations there, but then we have hotel, casino and cafe and there's locations under there. See there's a few of the properties, but everything, all the other, all properties are listed under property.

Andy Lambert 13:50 Mhm.

Don Middlebrook 13:56 Names further down below, right there.

Andy Lambert 14:00 Yeah, it would make sense to consolidate for sure.

Don Middlebrook 14:02 Yeah. So it's like, do we need them all in one directory or do we need to separate them out? What's the best practice for that? How do we move them properly?

Andy Lambert 14:12 I'll take a note to and just calling it out for the transcription for us later Luke to to take a look and see the like the functional implications of doing some consolidation on this because it would it would make sense to try to.

Don Middlebrook 14:25 Yeah, right.

Andy Lambert 14:28 To merge that so that it's seamless.

Don Middlebrook 14:30 Yeah, it it, yeah, just get it all clean and a better organization would be great. Um, Lisa has a question.

Lisa Cardia 14:38 I think it goes hand in hand with what you guys are saying. It's just if you guys do restructure this, does that break anything currently is my concern.

Don Middlebrook 14:46 You're right, yeah.

Andy Lambert 14:47 But I yeah, what we would do is assess whether it breaks anything, whether it's can. What we try to do is set things up so that there are no hard coded paths. Now it's not always possible, it's not always the case, but our. In developing is to make everything as configurable as possible and follow a configuration as a development implementation model. And I'll go a little bit under the hood. I'm not gonna spend too much time on this, but just to give you some perspective on that. There are a bunch of so there's a service on the back end in the in the source code that gathers content based off of tags and and there are other types of services like that where the paths that are involved. For example, here's a here's a good example. Is that we have a very an environment variable that can be set. It can't be set by like your average author, but it can be changed by, you

know, your AEM administrator, anybody like a TJ or whoever has access to a cloud services can go in and if you wanted to move say the locations. Root content for your content fragments, your location content fragments. Then this variable would allow you to change that location without having to do a code change. And So what we would look at and you know, making these these desired changes like to your tag taxonomy would be, you know, does that, is it handled? It doesn't matter at all. Is it does? Is there a variable in place either in the code or in cloud service environment? Variables that would need to be modified and if not, then the overriding goal would be to so you all can make these changes without it being a consideration, you know, so but for us to do it right now as we're sort of transitioning and we're onboarding new sites and functionality it would. The due diligence would be for us to at first let you know if there's any implications from a coding perspective and then give the green light if you wanted to make changes. But but have you do those changes? So at this point you guys as much as you can sit on that you know. And be empowered to to do what you want to do without being dependent on us.

Don Middlebrook 17:14 Understood. Understood.

Andy Lambert 17:20 So that gives a a pretty good bird's eye view of the taxonomy route and the and the tagging structure underneath. As I said, there are places in the code where or in your implementation where. Tagging is used to populate, for example, authoring properties and an asset metadata. Another area where tags are where there's a mapping between content and tags. Is these they're called. It uses the functionality from the ACS Commons library, which we talked about for. I don't know if TJ's on or anybody from the technical team, but. We're in the process of helping you guys upgrade the ACS Commons library. A lot of your functionality leverages capabilities from this open source library. It's just a collection of tools and capabilities that can be added to an out-of-the-box AEM implementation. And one of those pieces of functionality is one of those features are called generic lists. And we use generic lists in this implementation to map tag sets to particular content areas. You can see like I guess when we started working on paths at some point before one of the pauses before I. I was around and there was map. There are mappings for this Atlantic City cafe. Property to oversight page to the Atlantic City tag that and this experience fragment is associated for Kataya is. Associated with this tag set. So as we onboard those sites that this will be driving functionality I assume as long as it's being done the same as it was originally planned.

Don Middlebrook 19:34 Yeah. And how would we use this?

Andy Lambert 19:39 So it what it does is it it governs the tags that will can be used under a given section. I believe is what the that's typically why this is used. It's to enforce some kind of a. I shouldn't say that it limits the number of the tags that can be used. It's to impose it's to. Put some kind of constraint or guardrail in place and I can just take a note to go back and ask Vinay or if you guys could add it to the questions list for today, that would be good. Um. When you guys are compiling your questions for the post KP Q&A.

20:20 Yeah.

Andy Lambert 20:21 We can see how and I actually looked and I didn't see any really that affect like the corporate side or careers. For reverb, you know the sites that are alive today. So I don't have a real world example to show you, but I saw that this is in place when I did AI did an analysis of the to get my head around the implementation and stuff. When I came on the project I did a complete analysis and. You know this was called out as a functional a a piece of functionality where tagging tags and content were mapped together. So for the any AEM admins and then authors with that would have any interest in this the ACS you get the ACS Commons tools by going again clicking on the toolbar here or the tool icon and then this listed down here. And this is where you would go to view those generic lists.

Don Middlebrook 21:24 Mm-hmm.

Andy Lambert 21:26 There are also, um, generic lists for social media types. This drifts away from tagging and taxonomy a little bit, but I think it's important to be aware of. But laser mappings for the different social media types that have been defined and their how they're used on the back end.

Don Middlebrook 21:53 OK.

Andy Lambert 21:55 Features.

Don Middlebrook 21:56 Yeah, we'll we'll definitely need some more information on that. We'll add that to the questions.

Andy Lambert 22:02 Yeah, basically the question is how are dot Howard? What are the generic lists that are currently configured and what are they being used for basically? OK. So that's covers this piece of the taxonomy and then a big piece that I want to talk about are or is the relationship of tagging with your content fragments and other assets. So um. Yeah, I think I have. So it talks about that basically for content fragments you have a categories field that holds tag IDs that are used for filtering in various dynamic lists.

Don Middlebrook 22:59 Hmm.

Andy Lambert 23:01 Then you also have tagging of course on your assets using the CQ tags property just like you would on pages. And some examples of that where they're being used are like to tag by region, tag by event categories. And to give you some perspective on, I did a um, I'll blow this up a little bit for you to see. And I'm happy to share this with you guys. This is just something to have as a reference. So I did a I did an export of all of your page content, experience fragments and content fragments and it's just a sampling of the corporate assets. From your production author instance, I didn't take into account whether they were published or not. So this is pretty much everything and you're definitely using for content fragments more than anything else. You're using um tagging, so for example this um. This particular article from this is a content fragment news article news item that's showing hotel news and press releases. If there's anything relevant that you would like to see from this list, like if I was looking for a career. But it's not in production yet, so yeah, that would make sense. But this gives it has columns that show that this is what the tag space looks like from the from a coding or back end perspective. It has the namespace SHRSS with a colon and then the. The tagging hierarchy, hierarch, hierarchy. Can't talk today, guys. I would need a drink of water, but and I separated them by pipe just so that it was easy to see. So there's two tags associated with this particular news article.

Don Middlebrook 25:03 It's alright.

Andy Lambert 25:13 And then just for human readable, that actually translates to this path in the JCR. It's forward slash content. Yeah, basically just to get the tag ID, you replace content CQ tags SHRSS with SHRSS colon.

Don Middlebrook 25:35 OK.

Andy Lambert 25:36 And then vice versa. You would replace SHRSS colon with content forward slash content forward slash CQ tags forward slash SHRSS colon. And then I listed the the tag property. So all of these you could see your content fragments all are you leveraging that. I assume that's a required field when you're authoring content fragments. We can take a look and then there are some where it's both tagged via the categories drop down and the the regular old CQ tags. In the content fragment properties. Let's take a look at that just for context.

Don Middlebrook 26:20 Yeah.

Andy Lambert 26:25 One thing I wanted to touch on that we just had done, we had a support ticket for it in place was to at least for now replace the default content fragment editor with from the Universal Editor and Experience Cloud with the. Legacy AEM localized editor because you guys are using functionality and and other things that are not supported yet in the universal editor. So ideally at some point down the line you would be able to switch back

like failures. Here's the Experience Cloud version that you probably used to see them pop up when you go to edit a content fragment. Here's the um. Local version. So if I Scroll down through here. The search, yeah, category. So you can see that the category selected here is hotel, sub category, hotel, line of business hotel. I think these are all tag driven. I can go one way where we can, if you're interested, we can go look at the content fragment model.

Don Middlebrook 27:39 Yeah, let's look at that.

Andy Lambert 27:52 So all of your content fragments are based on content fragment models. I think Daniela touched on that the other day. And let's look at what was it we were just looking at. The location, OK. So all of the dialogue fields that you see when you're editing the content fragment are defined via the content fragment model. And you can see property ID. You click each of these fields on the left, it shows what the back end value is or the the type. So here's like. Either uh um number field or multi field. This tab data types is for actually. If I wanted to drag like if I wanted to add a single line text, I could just drag that over. I'm not gonna do anything 'cause we're in production, but. So it shows the field label, the back end value that would be used by code, front end or back end code, placeholder value, a type if it's if it's a numeric type, the default whether it's an integer or fraction. Fault values. Trying to scroll down on the this side. Anyone. There we go. You can actually specify validation type first over with the numeric field less than or equal to greater than between. You can even add custom validation types if you've got you know you can actually, you know, define. You can get real meta with this here on the development phase. If you had requirements like for a number field that aren't defined here, custom error message instructions for user. So you can go down through here and see. Now let's go down to a category.

Don Middlebrook 30:21 Less, yeah. So.

Andy Lambert 30:23 Hmm.

Don Middlebrook 30:26 So if these are not defined by tags in the list, was that a requirement to set this up this way or what's the better route to do like?

Andy Lambert 30:37 It's helpful. If you could, ideally everything would be nothing would be hard coded right? Like so. So if it were possible to drive this by, let me go back to the tags.

Don Middlebrook 30:44 Right.

Andy Lambert 30:53 Gaming hotels, Featured news, pre-word. here. This is casino, hotel, dining, retail and none. I'm just kinda seeing if there is a what was that support that's getting in my way. Just wanna see if there's an under these categories. Yeah, there's not really a one to one. So yeah, that's a good question for to be added. Or as a something in the I would say that goes into gap analysis for you

know some enhancements and. But you would have to look and see like what is this? Is this categorization unique to this the locations data type or is it universal enough to where it makes? Sometimes it makes sense if it's just an enumeration that's specific to one data type you think about.

Don Middlebrook 32:04 Yeah.

Andy Lambert 32:10 Content fragments. Think about content fragment models just like you would in a traditional like old school CMS where it's still database driven and you have a database table for locations, right? And you've got a field for location ID or property ID and.

Don Middlebrook 32:23 And.

Andy Lambert 32:28 Um, legal name, location ID and so forth then um. You know you would say maybe have like a look up table for this and that that or you may not. It may just be this a standard like like a numeration set that it's not used anywhere else. So why go through the it would be potentially over engineering to. Break it out.

Don Middlebrook 32:53 Right. So I guess my question would be how is this content fragment utilized right now? And how these lists populated and that or where it's used?

Andy Lambert 33:09 Yeah, while I'm here, I'm just looking to see if any of these are driven by um. Content problem. Doesn't look like it. The locations are used all over. I go open up the dam. That they're organized by regions and North America, yes. Was the one. This is the one we were just looking at is for. That's it's a test location. Well, maybe we need a better one.

Don Middlebrook 34:02 Mhm.

Andy Lambert 34:07 Anybody have a valid one right off the top of their head? It would be nice if these were named uh.

Don Middlebrook 34:16 Right.

Andy Lambert 34:16 Let's see what they are.

Lisa Cardia 34:20 We've asked for that too.

Andy Lambert 34:22 Yeah. Luke, don't kill me. This is where I would see you pinging me on Slack and saying stop being a good idea fairing. Put ideas in their mind. No, he wouldn't. He wouldn't do it.

Lucas Nelson 34:31 No, it's good, Andy. It's good.

Andy Lambert 34:35 Yeah, he wouldn't do that. He would just say, Yep, we got that's enhancement and.

Lucas Nelson 34:39 Yeah, yeah.

Andy Lambert 34:41 Oh yeah, here's um. Yeah, so this is it's got its location ID which gets coded here or or encoded here. I should say codified. This is the HR bet Illinois Sportsbook. I guess. And so yeah, these are used all throughout the site. Um. The properties and so, so forth, probably Lisa or my taison.

Don Middlebrook 35:09 Alright.

Lisa Cardia 35:10 Yeah, I think that this is like, this is something that we took away in a different session that we had with Daniela that we said this is like actually an issue for us because it was about getting a certain content fragment card on a page and that although we built it in the same like folder structure underneath the property, underneath the line of business and organized by month. It still required the author to put the location reference ID, which we thought was, you know, silly and not really user intuitive for people outside of like maybe this group.

Andy Lambert 35:44 Yeah, yeah, I hear you.

Lisa Cardia 35:44 But I think we saw that with, um, events. I wanna say I'd have to like, go back.

Andy Lambert 35:53 Yeah, so one way to like quickly see and and I know this doesn't solve the problem in its entirety is like if you had a separate tab open with the dam, you can look it up by some some descriptive reference you know like you might not know exactly HR bit IL sports book but. You know, if you knew it was IO sports book or something like that, it would help be able to identify it quickly. Your line. You can switch to list view and that's gonna give you the. Or it doesn't that this list view dot is not very helpful, but the like part of you is. And capture it. Well, we'll have it in the recordings and be captured as a screenshot. Just if you're keeping like a tips and tricks book or notebook for your authors and stuff. But. So yeah, let's actually wanna look at and I'm gonna stop sharing my screen for a second. I wanna do a quick look up. I see my pretty face keeps showing up. I don't know if it does on your screen every time I stop sharing and reshare. So hello.

Lucas Nelson 37:14 Only I see it, Andy, 'cause only the inside Adobe folks see the Adobe faces. Yeah, there you go. Now we see your face.

Andy Lambert 37:17 Oh, OK. Oh yeah. Hello.

Lucas Nelson 37:27 That majestic beard.

Andy Lambert 37:30 I guess the yeah, it's it. It was not white before I started today at Adobe.

Lucas Nelson 37:31 The Wizard of AEM. I remember when it wasn't white, yes.

Andy Lambert 37:43 All right. Yeah, I'm gonna share my screen again. So I have this put together for you guys and I'll send it out as a follow up. It basically breaks out where you have asset metadata that's driven by tags. So obviously you've got your CQ tags field. The brand asset metadata field and maybe I can go find an asset and we can look at it. So you have for context venues and branded experiences, SHRSS venues, LOB and you can see on the right which tag namespace those align to. You guys want to see that in action?

Don Middlebrook 38:35 I mean, I'm familiar, but maybe so everyone else.

Andy Lambert 38:43 Help me find an asset so I'm not digging around. I should be able to pick anyone. I completely. Tell you how good my memory works. Yeah, so if I click this for brand. It's take MA to the tag taxonomy for brand. I would go back over to tags. It's a Hard Rock International, Tunnel Gaming, Tunnel, Hard Rock. Makes sense. So that's Yep.

Don Middlebrook 39:49 Mhm. Yeah, you can also type ahead, so.

Andy Lambert 39:58 Yeah, I'm not that quick. And then there's the venues and branded experiences.

Don Middlebrook 39:59 Yeah.

Andy Lambert 40:04 Uh, I will show you something neat though if we have time where I'll use type ahead and you'll see how. I can be pretty expedient with that particular tool. Oh again, same thing. Then using branded experiences, this starts out at that that root and the tag taxonomy. That's another form of governance. And then this also lists that um one place where it's event categories is what's being used for um. For this categories field, let's go back to that asset for a second actually.

Don Middlebrook 40:53 That's they're all on the right column.

Andy Lambert 40:58 Thanks.

Don Middlebrook 40:59 Yeah, those aren't the same. Tags.

Andy Lambert 41:03 Let's say it starts with awards, bars and lounges.

Don Middlebrook 41:05 Yeah, those aren't the same, right? Yeah, these these are the ones that are populated there.

Andy Lambert 41:09 It's, uh, this one. So this is where it would make sense like either to rename, rename these namespaces or like this could be like.

Don Middlebrook 41:25 So those are the those are the ones that you used on the content fragments. So the other ones are the ones we're using I guess for assets, image assets.

Andy Lambert 41:25 Is there a? Mhm. Yeah, it says their event for it. So both the metadata asset property like if I hit cancel and like category, this should be event category because that's what drives it.

Don Middlebrook 41:48 But this isn't. This isn't. This isn't for. Yeah, this isn't for events.

Andy Lambert 41:48 And then again and then. Oh oh, that's interesting. And then you actually have a totally different event categories.

Don Middlebrook 41:56 Yeah, that's that's why all this needs to be rethought and reorganized.

Andy Lambert 42:01 Mm-hmm. Yeah, that makes a lot of sense.

Don Middlebrook 42:04 Because. Yeah, that's where I was getting confused before because I'm going in and we look at the properties and it's we have these categories, which is fine because this is what I need for the image assets. But then you have I guess categories that are only applied to. The content fragments. So that's where I guess the news and events and these other the categories is applied, I assume. So that's why we need to figure out what's going on here, how we can get this cleaned up and organized better.

Andy Lambert 42:30 Yeah. Yeah, so we'll take it as an action item, circling back what we said before to and we'll do it. We'll do this pretty quick. I wanna get an answer for you so that you can feel comfortable making changes and knowing that it's not gonna break anything.

Don Middlebrook 42:38 Yep. Yeah, yeah.

Andy Lambert 42:49 OK. Just close a couple of things. I'm not.

Don Middlebrook 42:53 I I assume just moving using the move tool is fine. That's probably will update everywhere unless it's hard coded, but hopefully nothing's working.

Andy Lambert 42:59 Yeah. Yep, that's correct. It'll yeah, it'll update all your reference pads for you. So yeah.

Don Middlebrook 43:06 Yeah, because I mean, I've been doing that for a while with the assets, trying to clean up everything that's on stage because we had a lot of assets that were put in the dam and I've been trying to clean that up, rename assets, move them to the right directory, so. Trying to get the metadata updated as well so.

Andy Lambert 43:29 I think it's a good time, like in general with where things are with the implementation. Yeah, it would have been great. Like you came in, Don, like when about a year ago, maybe. Yeah, yeah. And and we're at a place now where we're doing this whole exercise of these KT sessions

and the true and the.

Don Middlebrook 43:39 Year ago, Yeah, 13 months ago, yeah. So it's. Mhm.

Andy Lambert 43:49 Gap analysis and like and then ideally moving to the next wave. So for all of these things that it this is a good opportunity to to make these adjustments like yeah you're pretty far along there's there's several you know levels of the taxonomy but it could be a lot worse sometimes you know if you were if we had four more properties.

Don Middlebrook 43:51 OK. Yeah. Right, right. It can.

Andy Lambert 44:09 Right.

Don Middlebrook 44:10 Yeah, and and there's, you know, the metadata schema we probably need to look at and make changes to and add things that we don't already have, things like that. Definitely need to look at. But yeah, this is a, you know, we should.

Andy Lambert 44:25 Yeah.

Don Middlebrook 44:26 Make sure that before we do a full launch, we have all this, you know, organized better, clean it up better. Um. And so forth so.

Andy Lambert 44:34 OK, alright. And again, I'm gonna send this. I've got a couple of different documents I put together. Um. So the one we just looked at that lays out where tags are being used across asset metadata schemas and all that, and then I'll send you.

Don Middlebrook 44:44 OK. Yeah, mm-hmm.

Andy Lambert 44:55 Some uh. I'll send you the my actual agenda, my talking points, this document that I'm referring back to, and then I've got some other things that just may come in handy, like list of pages where.

Don Middlebrook 45:03 OK.

Andy Lambert 45:13 The card list is being currently being utilized and stuff like that. So that may may not be matter that much for you, but for you know authors that might be useful.

Don Middlebrook 45:16 OK. Really. Yeah. Yeah, definitely.

Andy Lambert 45:24 Coming back, let's see how much more so I know. Yeah, I need to talk pretty quick.

Don Middlebrook 45:30 You got 12 minutes.

Andy Lambert 45:32 No sweat. So yeah, and then we've touched on some a lot of this already just by walking through. So the tags are organized by under SHRSS or a high level broken out by things like regions, events, properties. But you could see there's opportunity for some optimization with the

category field specifically or category category fields or spaces. We talked about the path to tag mapping, how that's that that's it looks like it was being set up to be used for hotels, cafes. Which are ideally hopefully upcoming migration projects. So then it gets into talking about some best practices and taxonomy strategy. I pulled a lot of this content from the. Assets tagging best practices and and sites tagging experience league pages and those are linked at the top of this document. But we wanted to talk about permissions specifically so we can. It is possible to. I say it's possible. It makes it sound like it's some esoteric practice. You have the ability to set permissions at a granular level on the tag taxonomy. So for example, if you only wanted certain folks to be able to manage regions, then we use on the permissions console. We could certainly do that.

Don Middlebrook 47:12 Yeah, I think we definitely need to lock that down because we don't want everybody going in, adding random tags or making messing up something, deleting that something that's not shouldn't be deleted.

Andy Lambert 47:21 Yeah, so. Yeah. So the way that that would work and and we have another session lined up for user management and and group management and stuff. But essentially you would like go within a group. You never want to give permissions to a person that always, even if there's only one person in that group for the sake of scalability and also if they're. for technical reasons why um you would only want to give it to assign permissions at the brief level. Oh, let's say and I'm not going to change anything again because we're in production, yada, yada, yada, disclaimer, disclaimer. That actually goes to a group. I don't want that. Oh, go there to permission. Back on that. Go back over here. Here are the permissions. So somewhere in here is probably something that admin briefly can take just for fun. Yeah, we'll just say this one. And this gives you a granular view of the paths that a particular group has access to and what level of access they have, what privileges, where read, write, add children. They delete even CRX replicate means publish whether they can actually publish or not. So you know you could actually add ads just for that particular path under. DQ tag. So let's say we only want we gave this group for a cafe. So yeah, you can do that. Select it. And get ready. If it if they can do everything and then there's shortcut, just do everything. You can actually specify whether it's a deny or allow. There are best practices around that that we'll get into during that session. But Oh yeah, that. Um, that is how you would go about. Getting granular with your permissions. Just go back and make sure that I'm covering exactly. Oh yeah, for governance, that's that's how that would occur. You put guardrails by defining who can do what. You can also, as I showed, you can specify whether they can just read the tags in Tag Manager, whether they can create, update, delete. When you do delete tags, it's gonna tell AEM's gonna tell you that they're referenced by other resources. So that's baked in. We covered. Pretty much all of it. And there are additional topics. OK. Oh. Yeah, this says I showed using permissions on the tag tree. It talks

about keeping a, you know, a document somewhere, whether it's Excel file that has permissions for all of your different content types and metadata types or just something where you're tracking. And maintaining this um.

Don Middlebrook 50:58 What's in the architecture workbook right that we have?

Andy Lambert 51:01 Yep, Yep. Yeah. As it was whenever it was last, you know, updated, it probably. My guess is it probably could be some ugly. Let's see.

Don Middlebrook 51:02 Yep. OK. Yeah.

Andy Lambert 51:17 So best practices just for everybody. It's you want to use single vocabulary glossary that everyone's agreed upon and it's part of, you know, your metadata governance model. Believe it or not, it sounds like I just made that up or pulled it from somewhere, but it's it's part of when you're looking at.

Lucas Nelson 51:33 Yeah.

Andy Lambert 51:36 Especially a DAM capability maturity model, but a content management capability maturity model. You know, one way of sort of defining or figuring out where you are along that that CMM path is by looking at the governance, including documentation that you have in place. And so you know, defining the vocabulary, the lexicon that you work from is an important aspect of that. And avoiding synonyms with separate tags is kind of just a general guideline. Avoid over tagging assets and resources. Always, you know, just like with any CMS resource type, you always looking to reevaluate and optimize. Yeah, and then this one just talks about that that where the ACS Commons path tag mapping lists are. That should definitely be a governed thing. Should not just be like your average author should not be able to come in here and go to. ACS Commons and modify these lists because they they drive functionality. So it should be an administrator or super author or someone that understands. Again, probably just like it sounds like you're the damn strategist on. It sounds like probably someone would be designated as.

Don Middlebrook 52:44 Right. Mm.

Andy Lambert 53:01 at that level of metadata governance, and this will be part of that that job, that title, you know.

Don Middlebrook 53:06 Right. Yeah, I'll just have to. Do some deep dive on that.

Andy Lambert 53:17 When we talk to them, let's say. Talked about metadata schemas and how the CS are used there. Talked about content fragment, talked about pages. As authors, you probably know you know what tagging looks like when you're on a page. I probably don't need to go into that, but just for real quick. And like I we're coming close to time. I don't know if you want

to tee

you up for close out, but again, just to have you prick up your ears and I'll work through the rest of.

Don Middlebrook 53:44 Mhm.

53:52 Yeah.

Lucas Nelson 53:56 Was it you showing anything else, Andy? Wasn't there like some cool tip you were gonna show? Yeah.

Andy Lambert 54:00 Yeah. Yeah, I have a second. So like anyway, this just covered it like so here for the blog or I don't know Don, if you're familiar with all sites offering side, but basically this is your general tags fit. Yeah, so you go into a, you go into a page and that's the blog or new page and here's the.

Lucas Nelson 54:04 Yeah.

Don Middlebrook 54:15 No, I but OK, yeah.

Andy Lambert 54:22 Property you got tags. This is where you do and you can see this is not governed at all right now. So right now anybody could apply any you could go as an author. I could go in and be like, yay, this page is associated with portraits, no orientation. So I'd totally recommend putting adding some guardrails there, like stubbing out like what your baseline page tagging is.

Don Middlebrook 54:41 Yeah, definitely. OK.

Andy Lambert 54:52 Anything else? There's a little more goes into detail about that that content listing service by tag and I'll send when I send this out, you'll have the you know more information about that.

Don Middlebrook 55:08 OK.

Andy Lambert 55:10 Um. Yeah, I'll just sit out the rest of good.

Lucas Nelson 55:12 Hey, with that, with the yeah, hey Scott, I I pinged you on chat. Is there a SharePoint folder you can create for some of this collateral that Andy's gonna provide? I think it'd be better to have a a link to your SharePoint versus a.

Andy Lambert 55:27 Collateral band.

Don Middlebrook 55:28 Um.

Scott Sorel 55:30 Yeah, sure, sure. Yeah. Don, do you know where you have a place where you prefer to have all the damn stuff? So usually I just put it in all in one. Yeah. So maybe, maybe off the route.

Lucas Nelson 55:31 Document floating on e-mail.

Don Middlebrook 55:39 I mean. I mean, I can put, I can put it in mine my OneDrive.

Scott Sorel 55:43 Yeah, yeah. So I I would say that I would, I would ask in this case, I would ask, I would defer to Don Luke.

Lucas Nelson 55:44 Yeah. Don, you just want us to send you the doc and then you'll handle the storage. Oh, all right, that's fine. These aren't like big documents, Andy. They're just note files. Yeah.

Andy Lambert 55:51 OK.

Don Middlebrook 55:53 Yeah, yeah, I can do that.

Scott Sorel 55:54 Perfect. There you go. Yeah.

Andy Lambert 55:58 Yeah, then, yeah.

Don Middlebrook 55:58 Yeah, but we just wanted to keep everything together, so yeah.

Scott Sorel 56:01 Yes, perfect. There you go.

Lucas Nelson 56:02 OK. Then that that that's good then that answers that. Thanks, Don.

Don Middlebrook 56:06 Yeah, yeah.

Andy Lambert 56:07 Yeah. So I think that covers us for tagging and taxonomy. As I said, we'll get more, we're going to deep dive into metadata ad nauseam tomorrow. So look forward to that.

Don Middlebrook 56:16 Awesome. OK.

Scott Sorel 56:17 Sounds fun.

Lucas Nelson 56:18 With Chris Lewis. Yeah, yeah. It's good to pull Chris back into it. Yep.

Don Middlebrook 56:21 What was? What was your cool trick?

Scott Sorel 56:24 Cool.

Andy Lambert 56:26 Oh, yeah, yeah, yeah. Actually, Don.

Lucas Nelson 56:28 Yeah, you can't leave it that and then not close it, Andy.

Scott Sorel 56:29 Oh, there's a cool trick. Nice call. Nice call out done.

Andy Lambert 56:31 My bad. It's called Watch me slip out the side door. No, hold on.

Don Middlebrook 56:36 Right.

Andy Lambert 56:37 Yeah. Alright, so and Don, you probably know about this already, but uh, for other folks, it's just. You can manage. Um. All like thousands and thousands metadata for thousands of assets in one shot by exporting to Excel.

Scott Sorel 56:55 So that's. OK.

Lucas Nelson 56:58 Yeah.

Scott Sorel 57:00 OK.

Andy Lambert 57:01 You do that, right? Yeah, you grab this guy and I'll show you where my handy dandy. Oh, I'm not in for it. That's create. So let's you pick a folder that you want. Like, let's say I want corporate.

Don Middlebrook 57:01 I I already do it. Yeah. Mhm.

Andy Lambert 57:18 You go here, export metadata, giving name, SHRSS, corporate. Include assets and subfolders. What you never want to do is select all properties, so you'll end up with a nightmare of a spreadsheet with 17,000 like arcane fields that you have no idea of what they are. Um, where most of your.

Scott Sorel 57:36 Oh God.

Don Middlebrook 57:38 Yeah. Yeah, RDF.

Andy Lambert 57:43 A lot of the standard fields are the best way to do this and use a type ahead, which is what made me think of the. This is actually one I can use is like a lot of the metadata fields are prefixed with BC title. Oh, I gotta do the path.

Don Middlebrook 57:50 Mhm.

Scott Sorel 57:53 Yeah. OK.

Andy Lambert 58:00 Content none of the.

Don Middlebrook 58:00 JCR, yeah.

Andy Lambert 58:04 So it's like that, for example, and back it up.

Don Middlebrook 58:10 Type in SHRSS.

Andy Lambert 58:13 So do you have some metadata fields that are prep? Yeah, there you go. So if you have that namespace or you guys are just pre you're not, you didn't set up as namespace, but they're just prefixed. Yeah, so yeah, you can grab all these and then just copy and paste this.

Don Middlebrook 58:17 Yeah. Right. OK. This would be a good good question to ask. Like right now if I do this then I I'm having to populate every single time I run this report to do this. I I normally just export it directly.

Andy Lambert 58:37 Yep.

Don Middlebrook 58:42 And you're right, it does, you know. Fill up the whole spreadsheet. It takes hours to get this data. So if there's a way to set this up to where I have a pre populated set of metadata that I can just choose instead of having to go to add 15 different you know.

Andy Lambert 58:52 Is there a? Yeah. Yeah, you and every other damn admin. Chris is gonna talk. Chris is gonna ask the site or he's gonna say the same thing tomorrow. It is a pain right now. But yeah, you you do have to go and I just like, I just keep a text file with on another prop. Got a couple of other damn projects.

Don Middlebrook 59:03 And. OK. Yeah, I mean.

Andy Lambert 59:17 And I just keep a text file and just copy, paste, copy, paste, copy, paste.

Don Middlebrook 59:18 Yeah.

Scott Sorel 59:23 Yep.

Don Middlebrook 59:24 Yeah, I mean, that's what I do, so.

Andy Lambert 59:25 Yeah, but anyway, so for everybody else, you can export this. It creates a Excel file. You can go in and you know, let's say you've got 10 thousand 50,000 assets in there and you need to change 10,000 of those 50,000 to have the same category. Then you can do a copy replace in that Excel spreadsheet, save it and then re upload it from anywhere in the DAM. You don't have to pick the folder again or anything. You browse for that Excel file you just edited, upload it and within a few seconds it boom updates all of them. So that's pretty handy.

Lucas Nelson 59:43 Hmm.

Scott Sorel 59:46 To.

Don Middlebrook 59:49 Mhm.

Scott Sorel 59:58 Yes.

Andy Lambert 1:00:02 That was my trick, but Don already knew about it.

Don Middlebrook 1:00:04 Yeah, no, I knew. I've been doing that for a while. Yeah, bro. Yeah, I mean, I I got some stuff out of this, so I appreciate your time on here. Looking for tomorrow.

Lucas Nelson 1:00:07 Yeah.

Scott Sorel 1:00:07 It was a test. Donna's passed.

Lucas Nelson 1:00:08 That you're not surprised Don knew about that, yeah.

Don Middlebrook 1:00:19 If we can get that those questions added to the confluence, that'd be great. I'll add any more if I need anything so.

Andy Lambert 1:00:24 Yep. Yep. And I'll take a first pass through them as they're coming up and then any that need deeper dive, then we'll get into those with the offshore team and and get them back to you.

Scott Sorel 1:00:28 Thanks.

Don Middlebrook 1:00:28 Yeah.

Scott Sorel 1:00:32 OK, cool.

Don Middlebrook 1:00:37 All right, great. Thanks. All right, appreciate it.

Scott Sorel 1:00:37 That sounds great. Thank you.

Andy Lambert 1:00:39 Thanks everybody.

Lucas Nelson 1:00:40 All right. Thanks. Y'all have a good day. Thanks. Bye.

Scott Sorel 1:00:40 Thank you, everybody. Thanks. Good stuff. Bye-bye.

Session: DAM — 2026-02-18

SHRSS Adobe Knowledge Transfer - DAM Sessions-20260218_130350-Meeting Recording

February 18, 2026, 6:03PM

1h 11m 27s

Andy Lambert started transcription

Andy Lambert 0:18 Uh, it couldn't give me the recording message. Can you guys hear me OK? OK, cool. All right, we'll go ahead and get started. So today's knowledge transfer session follows along nicely with yesterday's topic, which was.

Daniela Tea 0:26 Yes.

Don Middlebrook 0:26 Yes, yes.

Andy Lambert 0:41 Tagging taxonomy and metadata governance primarily around the uses current the the various use cases that are in place now with the the SHRSS input current implementation. Where tags are being used to populate metadata drop down fields in some cases for asset metadata, in other cases is used for other component dialogue. Properties or fields. And so we covered all of that and and said

yesterday that we would and there was some crossover with what we're going to be discussing today, which is going to be heavily focused on all things dam, which will include. A deep dive into metadata schemas and profiles and all sorts of good stuff. So we for today's adventure we brought along Chris Lewis, who has been with Adobe for a good long while and worked with Chris. Danielle and I both have on a number of projects and he and I recently just worked together on, I know at least one LCBO, right, Chris? And then maybe, Oh yeah, also another as well. So he's he's honed his chops and he's here to provide subject matter expertise on on the dam. He and I have met. We met yesterday to talk about today's session and some of the areas where we think.

Speaker 1** 2:07 Yeah, yes.

Andy Lambert 2:25 Where I think he will be able to jump in and far surpass my level of knowledge, the assets and the art of the possible and the art of optimizing, you know, evaluating what you have today and and looking for ways to optimize it, say say hello, Chris.

Speaker 1** 2:40 OK. Hey, hey everyone. Good to be here. Hopefully I can, uh, provide some meaningful insight here. So yeah, get started and I'll jump in wherever I can.

Andy Lambert 2:56 OK. Oh, can everyone see my screen OK?

Daniela Tea 3:09 Yes.

Andy Lambert 3:10 Everybody's good.

Speaker 1** 3:11 Yeah.

Andy Lambert 3:12 All right, so oh one admin matter before we get going on this session is I did upload the reference docs that I talked about to the. Compluent page for tagging and taxonomy and all that. Uh. Those are I'll show you real quick. There's a PDF. These two are basically different views of the same thing. It's the lists or inventory of where all the pages that where you're you currently using the content fragment card list component. So you have it in PDF where it kind of has more like narrative based and then an actual spreadsheet for your use. You know, I don't know how much Don you in particularly that that rocks your world, but it may be of use to Lisa and and my pay is there. Working through things and just just having that holistic bird's eye view of the content. And then there's also this PDF is the agenda that you saw me walking through with all of the detailed information underneath each section, so.

Don Middlebrook 4:23 Thank you.

Andy Lambert 4:36 Oh, that's this one. And then this one is a spreadsheet of all of your where everywhere that tags are being applied to a page or experience fragment or content fragment. Those are all things that we touched on yesterday. As we get started, yeah, I'll ramble. I'm hopped up on caffeine like you wouldn't believe. So definitely jump in and raise it. Use the hand, raise hand tool and teams or you know.

Don Middlebrook 4:55 Thank you.

Andy Lambert 5:10 Danielle, just call me out if, uh, somebody has a question and I'm walking all over. He loves that. That's why she gave it some. All right, so today we're talking about we're gonna get a DAM training and usage guide for admins. And here's the JIRA ticket that was created that sort of spawned off this KTR defined. KT session and so as I went through and built out the agenda, I just constantly referred back to this to ensure that along with all the other information that we've got planned that we covered these essential asks. And. So and I I you know, where it made sense, I actually copied and pasted the. To make sure that I had it accounted for and you'll see in certain places throughout this document where I have it indented like a quote where I'm quoting directly from one of the goals for that section or where where it's pertinent. So yeah, if we look at the objective for the session, we want to. Facilitate Hardrock's understanding of how to properly use the dam to effectively manage assets, maintain governance, and support property teams without risking misuse or disorganization. That came right from the objectives from the JIRA ticket. And I sort of encapsulated the line items from a JIRA ticket in these bullet points. We're going to start out by reviewing the current state of the dam structural architecture, IE you know, the folder structure. And then Don, I I know that you had said that for right now the trying to migrate over to SSSSHRS primary dash primary was on the back burner at least. And that we didn't really have to focus on that today, but I did, I want to touch on it not if not that just not not that specifically though I think we will come to it, but just talk about what optimal state, where we are now, what optimal state looks like from your perspective.

Don Middlebrook 7:16 Yeah.

Andy Lambert 7:30 From others perspectives and you know how do we get there and that would include taking a look at of course the folder structure and any metadata and tag clean up. We touched on the need to do some. Some sanitizing of the the tag structure yesterday and then talking about we'll talk about dynamic media readiness. Um.

Don Middlebrook 7:50 Mhm.

Andy Lambert 8:00 And we'll we'll also walk through the admin authoring processes. A lot of this like Don may be totally familiar like do it in your sleep, but you know if there are other folks that aren't in the dam as much and are really looking at it from a sites perspective and working with the assets from the dam for pages that they're able to talk about. That and then, um, well, I don't know what this word is.

Don Middlebrook 8:21 Yeah.

Andy Lambert 8:25 I think it's supposed to be holistic. There we go. Well, I don't know how that's got in there. I guess bothly how? There we go. We'll go with that. We'll talk about, we'll revisit tags and then we're really gonna get,

I know I was gonna restructure the way that that was worded or rephrase it to be more all-encompassing of of the level of depth that we're gonna get into as far as even conceptual notions behind. A, you know, asset metadata and tagging and AEM and then we'll capture any follow-up work for any items that need to be go into the gap analysis as missing. Right now or or not working as expected or a new feature enhancement and you know as we're going definitely keep track of your questions like we've been doing and and those items for gap analysis.

Don Middlebrook 9:26 Yeah.

Andy Lambert 9:30 Oh, by the way, I seriously doubt we're going to get through all of this today because each one of these topics is an hour discussion. It could be. I think that we can touch on it and then or not touch on it, but we'll get in deep where we need to. And we'll manage time and then we'll see what follow-up looks like. Does that look like discovery, you know, or what? What does that look like?

Don Middlebrook 9:49 Yeah. Yeah, I I figured there's. I didn't realize we didn't think we could get everything done in, you know, just an hour time. But yeah, if there's a potential if we need to. Yeah. Have another session if if that's possible, you know, make sure we cover everything.

Andy Lambert 10:12 Yeah, well, like we definitely want you to feel, have the keys to the Kingdom in terms of understanding the current implementation and like we talked about yesterday, where you can feel comfortable making changes and then where?

Don Middlebrook 10:20 Yeah.

Andy Lambert 10:29 You know that there may be coding ramifications or at least configuration changes that need to happen on the back end to to support like for example I and Daniela can speak to this move on content fragments, right? Like let's say you did wanna move forward with. SHRSS primary, one of the first things that we would need to look at is

the way that content fragments function. So you know, that's just one I can think of off the top of my head where it wouldn't be just as simple as merging it in, you know?

Don Middlebrook 10:47 Right. Mhm. Yeah. Yeah. Well, and just to give you a little bit of background, so that SHRSS

primary was only set up decided that last August because of the way the assets were originally migrated into the SHRSS directory. At that time I wasn't aware that we could move asset without breaking reference, so it was and because I wanted to rename all these assets, but because I didn't know that we could move it without breaking and renaming assets, I was like let's just keep everything in SHRSS as it.

Andy Lambert 11:19 OK.

Don Middlebrook 11:38 Is and let me figure out what to do with that. And then we were going to go and say SHRSS primary would be where all the new assets go. But I think it makes more sense that we reclaim the SHRSS as the main directory where we will move forward with. That way you don't have to move those content fragments and it was the original plan in the architect workbook. That's what was what we were planning on doing originally, but it seemed like it was going to be a lot of work to do that from either both mine or and Adobe's side.

Andy Lambert 11:57 Any.

Don Middlebrook 12:16 To do that work. So we came up with that plan. I believe Daniela, you were on that call or we had that conversation before, but now that I know that I can move assets around without really breaking, although it has broken some, but.

Andy Lambert 12:20 I see. Uh huh.

Don Middlebrook 12:34 I I just want to keep everything simple, keep it at the SHRSS. Anything that's in primary I need to move over and then we need to we can, you know, deprecate, you know, get rid of the primary at some point. And then just move forward with having that. And I've been working on all the directories and trying to get everything in. So cafe's mostly done, hotel also have a lot of work to do on, but that's where I am right now, so.

Andy Lambert 12:50 But. OK. Yeah, thanks that. That definitely helps to level set on, you know where things stand and the background on on how all that came to be. And I think I So what we're gonna touch on, I keep saying touch on, we're gonna get into.

Don Middlebrook 13:15 Yeah.

Andy Lambert 13:22 Maybe a path forward that would. So we're going to talk about, you know we're looking at what we have today and then what where we might like to be and that could be like if your goal, if your North Star well is in fact. And it doesn't sound like it necessarily is like maybe there's some middle ground, but if it was SHRSS primary, like what what a path might look like to get there. And one idea that Chris and I went back and forth with full disclosure is mostly his idea and may just going, yeah, that's a good idea. Is having a and we've seen this on a lot of projects actually where you might have a a folder called a root folder called legacy assets, legacy dash assets or migrated of dash assets. Right. And just for the sake of of levels that clear and clear in the slate and starting fresh, all of those migrated assets we we take for example everything out of and Daniela don't freak out. We pull some thought into this and. Not this is all just up in the air. I can see Daniela. Evil eye, there she goes. Now, but so for example, you've got this under corporate, you got the photography folder as part of the content migration process and for other reason that I wasn't around then that you've got all these assets 1000 plus.

Don Middlebrook 14:42 Yeah.

Andy Lambert 14:57 You know for corporate in this folder, so it would you could and should move those out of there and organize them in a form or fashion that makes sense, but if if you. If you couldn't, if there isn't a a happy path to getting them exactly into the damn structure that you want right now, but there is a path for all new stuff, just like you said for the primary folder you had, you could have like, OK, this is where all the legacy stuff lives. We know that someday there may be a cleanup or some.

Don Middlebrook 15:25 2.

Andy Lambert 15:32 Scripting. It could be done with scripting for sure to migrate it all, eventually clean it up. But you know, moving forward as of this date or as of the launch of this site, everything or development of this site, everything goes under the new structure.

Don Middlebrook 15:32 Right.

Andy Lambert 15:48 Um, Chris, you want?

Don Middlebrook 15:49 Yeah. But if you look under cafe, I mean, I've been actually working on that structure to get it the way it is, you know, compared to the architecture workbook that you know what we have aligned there. So I've already moved things around. So that that one is.

Andy Lambert 15:51 Yeah. Yeah.

Don Middlebrook 16:05 Fairly to the way I need for cafe. I haven't worked on anything else as far as moving things around. So if you go into properties, if you click properties and then I'll you know everything's there the way it was. Originally it was just.

Andy Lambert 16:20 I see.

Don Middlebrook 16:22 Cafe and then the list of like the properties and then underneath properties was a language folder and then each language folder were assets and there's there's duplicates all over the place. There's so many duplicates in the system right now. And then under Amsterdam, then you'll see the types of PDFs and you know, so I already have it in the structure that needs to be for cafe. So I think I'm OK if we just move forward, I mean and put new assets in there, it's.

Andy Lambert 16:50 And let me ask Chris a question real quick, just to sorry to cut you off, but I wanted while we're right here in this context. So Chris, I know from a site's perspective and with content fragments and when we're dealing with localization like multi-site manager translations.

Don Middlebrook 16:56 Sure.

Andy Lambert 17:07 That you want your you need in order to take advantage of a EM like automated translation capabilities that you need to have your page content structure such that it has. Or to open up a site, for example, you would see it's under content SHRSS EN and I can't remember Danielle or anybody right off the top of my head if there's AUS in between or not. Yeah, I know, OK. Um, but the while I'm browsing through it to show the example. No, I don't want to do a user survey. Give me alone Adobe. Um. We gotta incorporate. I got it. And then you can see here that we have English ENFR and ES and then in the dam you'll see that under CS under each of these.

Don Middlebrook 18:04 Right.

Andy Lambert 18:15 Skype Cafe maybe. You'll have. So actually this works out. Yeah, you'll have your translation folders. And so Chris, where I'm going with this is if I it's been a while since I did MSM with like translating actual assets. Can you speak to that thumb? Like would you want to follow the same structure?

Don Middlebrook 18:21 And.

Speaker 1** 18:33 Mm-hmm.

Andy Lambert 18:40 Sure, or multilingual support with assets besides content fragments.

Speaker 1** 18:43 OK. Yeah. So for typically for any automated language support, you know, like AM guides or anything like that to do any kind of swap out of assets based on, you know, localization language, that language folder typically resides at a top level, right? It's usually under, you know, maybe under the very first. Level of SHRSS somewhere in there. You typically have a language starting here, not US and you're in sights, right? So if you go to the dam, yeah, if you go there, I mean you typically have a language here and then all these separate folders underneath the each language, right? So that.

Andy Lambert 19:15 Yeah. Oh, sorry. Mm-hmm.

Speaker 1** 19:25 At a top level, you can easily have the software automatically swap out language versions if that's a requirement. I'm not sure if your assets have language versions or not. You can go down lower levels, but typically what that kind of winds up doing is.

Don Middlebrook 19:35 Yeah. I mean, we're.

Speaker 1** 19:44 Is creating a very complex and convoluted folder structure, which may not be an issue. It all depends on how you're working and how your organization is in there managing assets. So I mean, you certainly can do that. It makes the automation a little more difficult because then you've got to be more specific as to where you're pointing to what assets you.

Don Middlebrook 19:55 Right.

Speaker 1** 20:04 Want to translate, you know, with the along with the site pages. So that's why it's mostly it's more universal and easier to put that language at a higher level, right? So yeah.

Don Middlebrook 20:05 Right. I think in general for photography or anything like that, we're we're trying to move away from having any kind of copy baked into the actual graphic or image. So yeah, the only thing I can think of translated, you know, we have our our PDFs or menus and things like that.

Speaker 1** 20:16 Yeah. Mm. OK.

Andy Lambert 20:27 That's good.

Don Middlebrook 20:35 Be translated, but I would probably more rely on metadata to assign if it's a English or Spanish whatever to manage that rather than having all the assets in.

Speaker 1** 20:36 Yeah. That's fine. Yeah, that's definitely, that's definitely one way to go about it. If that works for you, all the folders do is drive automation, right? So if you have automation software such as AM guides, that's one example. It it doesn't look at languages on assets. It can't like do that, you

know, because.

Don Middlebrook 20:56 Yeah. Right, yeah.

Speaker 1** 21:09 Know where to look for the corresponding version. It could be anywhere technically, right? Even if it's in the same folder the way you're storing it, it doesn't know that, right? So it's not gonna do some granular search throughout the DAM for a comparable asset with the different tag on it. It relies on a folder structure to find.

Don Middlebrook 21:13 Yeah. Yeah.

Speaker 1** 21:28 A specific folder structure that's guiding it. OK, so that's all you're missing out on. Not doing it that way is any kind of language translation automation. That's all really. Yeah, so that's fine. And really some of the use cases for that is not.

Don Middlebrook 21:30 Yeah, I see what you're saying.

Andy Lambert 21:43 Chris, well.

Speaker 1** 21:48 Just text or language. Some organizations have actual different imagery for different languages, right? It might be an image of, you know, a local, you know, area or spot or city or town, and they want to swap out the actual imagery, right?

Don Middlebrook 21:51 Mhm.

Speaker 1** 22:04 Not, you know, text aside, right? Yeah, right. So that that's usually what that's built out for. But if you don't have a use case for that, then it's irrelevant to you.

Don Middlebrook 22:07 Right, right, right. I I can't think of right now. Maybe someone else has a use case for it, but yeah, because I'm really just trying to get to where we're utilizing a single asset for, you know, across the board rather than having the same asset.

Speaker 1** 22:27 Yeah.

Don Middlebrook 22:30 For English, for Spanish, you know pages where it's, yeah, so you just have one asset that filters across all the sites and pages, so.

Speaker 1** 22:30 What?

Andy Lambert 22:31 No.

Speaker 1** 22:33 That certainly makes it easier, yeah. Yeah. Sure. Yeah. So that that's pretty much all the.

Andy Lambert 22:42 And move in the direction of your having rendition profile or profiles for generating all the renditions you need for your components and then eventually move into dynamic media and doing all that with with preset.

Don Middlebrook 22:45 But. Yeah. Yeah. Yeah, and we're gonna talk about renditions right today.

Andy Lambert 22:57 And. And actually Daniela pinged me on that earlier and I have not look at the massive agenda that I created and I have not put renditions in there. So I think but but.

Don Middlebrook 23:09 Yeah 'cause I've tried to create them and I just, I think I've fallen short on something and it's they're not applying so.

Andy Lambert 23:16 But. Because it was called out like it's a hot topic then, but let's let me step through with your. So for everybody that's on the line, I know that Don, you're familiar with the current structure of the dam. Just touch on it for I don't know how to anybody that's not been working on this. You've got your s s, your Hardrock support root folder in the dam, just like you do under forward slash content for pages.

Don Middlebrook 23:39 Yeah.

Andy Lambert 23:48 And under forge live content experience fragments slash SHRSS for experience fragments. And then at the root level you've got a folder dedicated to content fragments which you guys are using extensively, which is great. Recommend doing even more of it. Basically, anytime you got a structured data element that's going to be reused and displayed in different ways throughout the site, the content fragment is the way to go. That's good, and those are treated as assets. You might think that's odd that they're treated as assets in AEM as opposed to something like an experience fragment, but. took a long history behind that. They used to be straight up text files a long time ago. Totally different. Um So and then you've got your top level site level, Daniela, maybe you can probably speak the better than I can, but you've got your corporate which right now pretty much everything from the content migration using the promo was put into here. And what you know, we just talked about that it would be ideal and and really I would say required at some point down the road to move this stuff out of here. You're not going to have like from a performance perspective on the end user side, a performance issue. But you're certainly going to have from an authoring perspective, difficulties navigating, you know, trying to get through thousands of of images and one or assets in one folder. So and there's just all kinds of taxonomy that we talked about yesterday, governments.

Daniela Tea 25:23 Yes.

Andy Lambert 25:35 Who can upload images that you know to what sections of the corporate site. We'll talk about permissioning as part of this there in a bit. So one thing that is we're getting the other work stream besides the knowledge transfers that is obviously it's a career site going live and this is 1 case where under a corporate. Yeah, the careers assets live underneath of corporate, you know, it's a

separate site, yeah. And then the other live site reverb. And then I guess these are all where work was started on hotels, etcetera.

Lisa Cardia 26:12 Could we actually acknowledge, I don't know what happened with careers, migration of assets, but they all have like very odd names and at least I can confidently say in site core, which that's where these assets came from. They did not have these names.

Andy Lambert 26:12 And. Yep.

Don Middlebrook 26:19 Right.

Lisa Cardia 26:31 So is there?

Andy Lambert 26:32 Assets uh, content fragment specifically or just the all these asset?

Lisa Cardia 26:35 The the photography that we see, I know that Don did some renaming on his end, so there are a few that have been renamed. But I know like a lot of these didn't have the the same naming conventions. I think Don, didn't we call that out that like some of the logos had like a really weird chain of letters and numbers instead of.

Andy Lambert 26:38 OK.

Don Middlebrook 26:52 It. Yeah, I mean if you look at the file name for any of these, you know you might have the title that might be OK, you know and then but the the file name is like C2D5, you know like.

Lisa Cardia 26:55 Just the theme of it.

Andy Lambert 26:57 Oh.

Lisa Cardia 26:59 Yeah.

Andy Lambert 27:05 You got like I I see.

Lisa Cardia 27:05 Yeah. Yeah. And so we've we've noticed that for the image sources on the page. So obviously that's an issue that it it inherited some odd string of numbers.

Andy Lambert 27:10 Yeah, I see it. Whoa.

Don Middlebrook 27:19 Yeah, yeah. And that's for a lot of them.

Andy Lambert 27:19 Yeah. That's a unique identifier, probably from the prior, um, the prior CMS system.

Speaker 1** 27:26 OK. It looks like whatever, whatever tool they use to extract that asset from its original location pulled out some sort of like internal reference number that you know what they use on that platform and and kind of appended it to the name, unfortunately.

Don Middlebrook 27:36 Yeah.

Andy Lambert 27:38 Yeah. Yeah.

Speaker 1** 27:43 There there is a bolt tool that you can use in AM where you can get an export of all these assets, edit the names in a spreadsheet, a simple spreadsheet and and you know possibly even apply some sort of Excel formula to remove that front end part of it and then.

Don Middlebrook 27:44 Yeah.

Lisa Cardia 27:45 I.

Don Middlebrook 27:54 Yeah. Yeah.

Speaker 1** 28:02 Re upload the spreadsheet in the AM and then a bulk operation won't name everything. Yeah, yeah.

Don Middlebrook 28:02 Hey. Yeah, it's that renovator.

Lisa Cardia 28:07 I I do want to say though like my my concern is that this was the first Sitecore site to get migrated. So whoever made the decision of whatever application you use to migrate them that like this needs to get flagged or else Don's gonna be cleaning up assets for the rest of his life.

Don Middlebrook 28:07 Yeah, I've I've.

Speaker 1** 28:15 Mhm. Yeah. Yes, that's right. Yeah.

Andy Lambert 28:22 Yeah, I think that I don't know if it was.

Don Middlebrook 28:23 Yeah, there's, yeah.

Lisa Cardia 28:23 So, like, we're lucky that careers is such a short, a small amount, but this is still like, not really acceptable.

Andy Lambert 28:29 Here.

Don Middlebrook 28:29 But there's and there's still a lot of assets that aren't even referenced, you know that were pulled over. So I mean I already identified most of those and I used a metadata, I exported a metadata sheet and then just re uploaded it to identify the in the title. So I knew what you know what it was but.

Speaker 1** 28:39 Yeah.

Andy Lambert 28:43 Yeah.

Speaker 1** 28:49 Yeah.

Don Middlebrook 28:49 Which ones could to move out, yeah.

Andy Lambert 28:49 Yeah, on another project I used, actually got copilot to do some of the heavy lifting. The copilot's not as good as other some other, you know, LL NS, but.

Don Middlebrook 28:58 Yeah. No, I mean, we have to use copilot here, but um, now.

Andy Lambert 29:02 But do even with just like some if you use a regex tool or if you're familiar with regex like you can do a lot just with like exporting CSV, put it into like copy it, put it into a text file and then do.

Don Middlebrook 29:08 Mhm.

Andy Lambert 29:18 A search and replace on the file without actually having to open it if it's huge for example and then use red tags.

Don Middlebrook 29:22 Yeah, I I do some vibe coding with. Yeah, I do some vibe coding with with Copilot to create Excel automations that will can do that for me. So I know how to.

Speaker 1** 29:35 Mm.

Don Middlebrook 29:38 I I can do that. Yeah. And then

Speaker 1** 29:38 That's the easiest one, but the the nice thing, the nice thing about renovator is it'll update. You know you don't have to actually physically move the file, it can. It can just update the name that under underlying name and republish it and update all references within AM all in one swoop.

Andy Lambert 29:39 That's cool. Yeah, I got it.

Don Middlebrook 29:44 Yeah. Yeah. Yeah, yeah. The only the only problem with that is if there's anything that has the same file name. So in case I wanted to move it to another everything to a the similar folder, it won't do it. It can only do. So you have to do it in batches, but.

Speaker 1** 29:56 Right, so. Oh yeah, yeah. Yeah, yeah.

Andy Lambert 30:11 Mm.

Don Middlebrook 30:12 Yeah, yeah. I I just recently found out about the renovator a couple weeks ago, so I've been kind of using it somewhat, but yeah.

Andy Lambert 30:13 No.

Don Middlebrook 30:20 Yeah.

Speaker 1** 30:20 That's a good tool for damn clean.

Andy Lambert 30:21 Yeah, Chris ought to get paid. Chris ought to get paid by somebody for advertising that thing every project.

Speaker 1** 30:25 Hey, as much Dan clean up as I've done. I mean, you know, you you gotta use the best tools that are available to you and that's definitely one of them, yeah.

Don Middlebrook 30:29 Yeah. Yeah. Yeah, and and when I, you know, I mentioned that there's like a lot of things with the same file names because we did have all of the structure of the the different language. Well, some of the same assets are, you know, in there multiple times and you know with with the previous bulk.

Andy Lambert 30:34 Hello.

Speaker 1** 30:40 Yeah. Yeah.

Don Middlebrook 30:50 You know, migration, you would have, you know, hundreds of the same asset in there. So, so and on that note, how can we clean up the dam with those duplicates easily?

Speaker 1** 30:53 Yeah, it's. Well, that's why it might be good to.

Andy Lambert 31:02 Yeah, so.

Speaker 1** 31:06 With duplicates.

Don Middlebrook 31:06 'Cause there's there's the same asset with different, you know, that we're.

Andy Lambert 31:10 Let's take a look at you got.

Speaker 1** 31:12 With the same asset name or you're talking about the exact same?

Don Middlebrook 31:14 Well, it's the same asset and we're, you know, I've been trying to rename everything the similar, but it would be the same asset. So in Sitecore I believe or Visigy, the sites would be set up to where you would have. You know, like here's a cafe site and there's multiple languages in it, so there'd be different pages and that same asset would I guess would be added to each of those folders. So when they were migrated over, they all had unique file names for each of those. And then you multiply that across all the cafe sites, you would have in some cases hundreds of assets that are the same.

Speaker 1** 31:53 Mm.

Don Middlebrook 31:54 So.

Speaker 1** 31:55 Got it. So, uh, so it's different.

Andy Lambert 31:56 Yeah, think of an example right offhand to search. I just wanna kind of search and have a business.

Don Middlebrook 31:58 Just just click on caffeine, go to search and then hit enter.

Andy Lambert 32:09 And then list them.

Don Middlebrook 32:11 Yeah, probably start seeing them right away. Well. Yeah, you probably have to. So if you go all the way down, so that additional FOBG, the background image that's in there so many times, this placeholder 1080 by 1920 is in there a lot of times and there's certain, you know, photos and other files. It's just.

Andy Lambert 32:24 Oh.

Speaker 1** 32:28 Right.

Andy Lambert 32:31 Mm.

Speaker 1** 32:33 Oh.

Don Middlebrook 32:34 On and on and on like and to give you a back story, there was 130,000 assets brought over. There's only like 25,000 that are referenced right now and a lot of those are duplicates. So it we probably only have really half of those that should be.

Andy Lambert 32:35 Wow. Yeah, I saw it. It looked like you had pulled the use the assets reports tool to get a sense of what is that what I saw on prod you were using.

Don Middlebrook 32:50 In the dam right now. Yeah, I I've I've done metadata exports to get all the metadata and then yeah, and I did that. I did that to that to get information.

Andy Lambert 33:03 This would be. Yeah, yeah. So I ran one last night to pull all assets on pro. Yep, this was the. So this one, Chris, was just for the photography folder. And actually, you know, let me jump back for a second. That's a good segue back to we're gonna need so many more damn sessions.

Speaker 1** 33:14 The one below that. Oh, OK.

Andy Lambert 33:28 But so the thought that Chris had yesterday, maybe Chris, you want to walk through this like this path of doing like a legacy or migrated assets folder and.

Don Middlebrook 33:28 Yep.

Speaker 1** 33:39 Yeah, right. From that for, for as an example, I was looking at was that photography folder that had well over 1000 assets. We were even unsure how many assets were in there. You know that which is, you know, I'm sure has a ton of duplicates to your point. So the way to typically handle that is to create a migrated assets folder First off, so that you can start to clean up and have a place to put the assets you do want to keep, right? So by using that renovator tool, getting an export of all the assets in that folder, you can then start to move these in groups. I would recommend by. Like we've we've done out here A through Z, put all the A, you know, assets starting with the A in one folder, B folder, C folder, so on and

so forth. And then number for any assets that's starting with numbers or something like that, right? Because what you really want to do ideally is get these folders down to where they have less than.

Andy Lambert 34:29 Mhm.

Speaker 1** 34:34 And and and I mean less than like probably more in the neighborhood of like 500 assets per folder, no more than that because the user experience of browsing folders with anything more than that is is hoard, right. You don't want to do that right and and find assets and so on and so forth and we can get to more into that searching and finding assets.

Don Middlebrook 34:36 Yeah. Yeah. Right. Right. Yeah.

Speaker 1** 34:54 Process later, but so and then if separating them by first letter doesn't do enough, well then maybe you start separating them by file type, like put all the PNGS or all the JPGS in one folder or another within those letter folders. Or maybe you do it by second letter AA, AB, AC, so on and so forth. You can get as granular as necessary. Hopefully you don't have to get too granular, right? Hopefully just that first level, the 1st letter or character of a asset name is enough, right? So that's just in the clean up of that and in that process to your point, overriding images that have the same name and the same folders.

Don Middlebrook 35:18 Mhm.

Speaker 1** 35:33 And this whole huge migration effort, you know, that would kind of help with that because you'd be putting them in a different folder. You'd be starting net new in a in a folder that's designated saying here's all these assets that were migrated and they're separated out, you know, somewhat, you know that we can.

Don Middlebrook 35:36 Yeah.

Speaker 1** 35:50 You know, manage them and look at them and kind of go through them in groups, you know? Yeah, that that's what I've seen done before. That's been the most successful. I mean, it kind of like whittles it down. It doesn't make it so overwhelming and just so, Oh my God, I just have a folder with, you know, 50,000 assets in it or whatever the case may be.

Don Middlebrook 35:53 OK. Alright. Yeah. Yeah.

Speaker 1** 36:09 You know so. You know, and then kind of helps you with that.

Don Middlebrook 36:11 Chris. I guess the the thing just kind of throw out there, but since we have multiple of the duplicates like each of them might be referenced on this page. So that's where the cleanup is I need to worry about is like.

Speaker 1** 36:16 Yeah. Uh huh. Each other. Yeah.

Don Middlebrook 36:29 How do we combine all of that into to reference that one ***? One version of that asset is on all of these pages instead of 20 versions of the asset are on different pages. You know what I'm saying? It's.

Speaker 1** 36:33 Yeah. And maybe, maybe you know this better than I would actually Andy, in terms of sites, because I don't know about the tools that are available for sites, but is there a bulk way to reassign like you want to say that that one on line four image medium width, maybe you want to reassign every occurrence of that asset across?

Andy Lambert 36:44 Yeah.

Speaker 1** 37:02 All pages to a different asset. Can you do that as our tool for that?

Andy Lambert 37:08 No, you would typically do it with a script and and or if, but if you were to.

Speaker 1** 37:10 No. Yeah.

Andy Lambert 37:21 Thinking I'm trying to think of a way, a clever way that you could do it by moving things around, right? Like if you had the correct image with the right name or something like that where you didn't actually have to update the page, the components.

Speaker 1** 37:28 Yeah, not.

Andy Lambert 37:36 File reference on the in the page config.

Speaker 1** 37:39 Not that I'm aware from a damn perspective. I mean, if you delete an asset, you know if every single one of these image medium with JPEGs, wherever it lives is being referenced in a different page location. They're all different sizes though too, but so I don't know if that is the.

Don Middlebrook 37:55 Yeah, not all of this, not, yeah, not all the solid solid sizes are referenced. So you see the no reference there. So yeah, in a lot of cases it's really the large version, but sometimes it's the medium version that's referenced.

Speaker 1** 37:56 It's not even really it's not. Oh, right, you see no reference, but even.

Don Middlebrook 38:11 We also have Web P and AVIF assets in there too that we need to replace with a JPEG version.

Speaker 1** 38:19 Hmm.

Andy Lambert 38:20 Yeah, so you could start to clean it out.

Don Middlebrook 38:21 So.

Speaker 1** 38:21 But even those ones with the same name, like like row four, row six have the same asset name but different sizes. So it's even though it has the same asset name. Oh, it's got a slightly different name. It's got the little number in front of it. 1219419 OK.

Andy Lambert 38:32 And a 41, but the sizes are different.

Don Middlebrook 38:35 Yeah, there's, yeah. And it still could be the same asset, same photo. That's that's The thing is in these other systems they, you know, whatever folder I guess is put in, it generated a unique name.

Speaker 1** 38:39 No. OK.

Don Middlebrook 38:51 For that asset in that folder and then the next time it was loaded a new a new file.

Speaker 1** 38:51 Right, OK. So AM does have an out-of-the-box duplicate detection that detects kind of what you're talking about, even if it has a different asset name and it detects similar the same asset. Exactly pixel for pixel, the same access asset, even if it if it looks the same, but let's say it's cropped slightly different or has an extra row of pixels.

Don Middlebrook 39:01 Mhm. Yeah, I've used that. Yeah. Yeah.

Speaker 1** 39:16 Pixels, or even if the metadata inside is different, it'll it'll treat it as a separate different asset, right?

Don Middlebrook 39:22 Yeah, I I enabled that and I got like about 200 reports, so I don't have time to go through all of those right now.

Speaker 1** 39:27 OK. Right. Yeah. But it has to be identical. Like everything about the image needs to be identical. Yeah.

Andy Lambert 39:29 E Easy peasy, no problem.

Don Middlebrook 39:31 Yeah. Yeah, yeah. And that's the other thing. And some of these might be cropped or there might be a version that is edited slightly. Or yeah, I've been working with Lisa's team to help clean up some of that, but it's all manual right now.

Speaker 1** 39:40 Yeah, no easy way around that.

Andy Lambert 39:46 Uh.

Speaker 1** 39:46 Yeah. And and that that's the only way when it when the images are different like that and they're cropped different and all that, that that's a manual cleanup.

Andy Lambert 39:50 Yeah. Yeah, there's some some of it you can do. So a lot of times when we're doing a a massive down like restructure, we'll treat it like a content migration project where we and just like with a content migration project you're gonna have like one off scripts that you use to.

Speaker 1** 39:59 Yeah, absolutely.

Don Middlebrook 39:59 Yeah. Mm-hmm. Mhm, mhm. Mhm.

Andy Lambert 40:37 Want to try to use AEM's ability to when you move assets to pick up on that and update all the references and the referencing pages, content fragments, etcetera. Then for those, there's a section in this doc. We're not gonna get to it today, but there is a section in this document. That talks about the exact case scenarios when AEM doesn't automatically update reference paths. So you'll have that as you know if and when we get back together we can dig into that, but you'll have there's a a lot of information.

Don Middlebrook 41:04 Yes. OK.

Andy Lambert 41:14 About like what's going on under the hood and you know what case scenarios that that automation is going to work and when it doesn't stuff like that. But I wanted to step back to this. So Chris, correct me if I'm wrong, but does does the renovator tool, is it similar to the? A bulk asset tool of days of old where you you'd start with a spreadsheet and you do your mappings inside of it? Or does it work totally different where you do it all through the console? And I'll ask real quick.

Speaker 1** 41:45 No, you do it. I do them all in the spreadsheet and it only works with two columns. You have that the column A with the path source and destination. That's it. But your destination you can have a different file name and it will rename it.

Don Middlebrook 41:48 The stores and destination.

Andy Lambert 41:52 OK, nice. Oh, cool. So.

Speaker 1** 41:58 Right. So if you're row two, if you put a column C with a destination and you call it just, you know, something different, it'll rename that file name in column B to whatever's in C Yeah, and the path.

Don Middlebrook 41:59 Yeah.

Andy Lambert 42:11 Yeah, so.

Don Middlebrook 42:11 And if there's another, if you wanna move it to another directory, as long as that directory's there, you can change the path too.

Speaker 1** 42:18 Yeah, yeah, I I'm not positive, but I think it'll also create a a a directory that doesn't exist, but I could be wrong on that. Yeah, no.

Andy Lambert 42:18 Alright.

Don Middlebrook 42:27 I don't. I haven't been successful with that.

Andy Lambert 42:27 So what you could do is basically so you would start out by generating like Chris we talked about just starting with this this report right where you we generated it for the photography folder under this in this case it was corporate right and then.

Speaker 1** 42:31 OK. Yeah. Yeah. Mhm.

Don Middlebrook 42:44 Mhm.

Speaker 1** 42:46 Yep.

Andy Lambert 42:47 You would take that spreadsheet. That would be like your master working workbook, right? And inside of it, maybe create another sheet where you're doing the mapping that you're talking. Maybe add your destination column here or create a backup sheet that's just for migration.

Speaker 1** 42:52 Mm-hmm.

Don Middlebrook 42:53 Mhm.

Speaker 1** 42:59 Yep.

Andy Lambert 43:03 Data and then you know you start like going through it exercise by exercise, using AI where you can to get things where you want them to be. Identify these outliers. For example, you know there are things like where if it doesn't have a reference at this point, you know maybe it's again it's a duplicate name. That's a pretty.

Speaker 1** 43:03 Yeah.

Don Middlebrook 43:11 Yeah. Yes.

Andy Lambert 43:22 Solid candidate for getting 86, right?

Speaker 1** 43:26 And what I would do is like for instance like row two and three, I would move only one of those, right? Not both. Even if it's both reference, I would just move from one and put it in your destination folder. So then at the end of the entire exercise, whatever is left in your original folder.

Don Middlebrook 43:27 Yeah. So.

Speaker 1** 43:44 After you're all done, you know it's a duplicate and should be deleted. Then you can look at all those assets and get a reference report and see what is actually being linked somewhere. Go update it to the new one that you have in the new folder. Then you can safely, once that's all done, come back and just wipe that folder, right? Because no longer are there duplicates in there.

Don Middlebrook 44:00 Mhm.

Speaker 1** 44:04 They've all been, you know, dealt with and all the references have been dealt with. So that's how I would go about it, you know, and it's a long exercise. It's going to take a long time, a lot of work, but it's.

Don Middlebrook 44:09 Right. Yeah. I, well, I I've been doing some of this for the last three months. So yeah, it's I'm on the right path. It's just there's different ways to do things. And yeah, and I I'll take a lot of this in consideration and.

Andy Lambert 44:17 Yeah.

Speaker 1** 44:20 OK, good. Yeah. Sounds like you're on the right track. Yeah.

Don Middlebrook 44:30 See what we can do. In in most cases, since there was 130,000 assets, like most of those were moved to the archive that were were not referenced. And then there are certain files that I knew I didn't need anymore. I got rid of so I did X.

Speaker 1** 44:39 Hmm.

Andy Lambert 44:42 Where's that archive folder?

Don Middlebrook 44:49 Get rid of about 30,000 assets.

Speaker 1** 44:52 OK.

Andy Lambert 44:52 I don't. I don't see the asset folder. Is it like under the damn root or where is that located?

Don Middlebrook 44:57 The the archives. Yeah, it's under SHRS. There's a top of the.

Speaker 1** 44:57 No, it was under the SHR. Yeah, it was under the the.

Andy Lambert 45:02 There it is.

Don Middlebrook 45:04 Uh, it's not. Yeah, it's, you know.

Speaker 1** 45:05 Yeah.

Andy Lambert 45:09 Oh.

Don Middlebrook 45:10 Not as organized as the other upper directories, but yeah.

Speaker 1** 45:10 In the I. And the idea of that archive folder is to have specific group access to that archive folder of whoever needs to see that, right? So the general, you know, damn browser population, you know, does not have access or visibility to what's in there, yeah.

Andy Lambert 45:15 Hey, Chris.

Don Middlebrook 45:20 Yes. Yeah. Yeah, and and to that point, because definitely do not want this to be searchable in the content, the the sites rail. So is that really just by the setting the rules to that?

Speaker 1** 45:37 Yeah.

Andy Lambert 45:40 Yeah.

Speaker 1** 45:42 The. Whatever ACLS the user has when they you know who when they log in, whatever groups they're assigned to, if they don't have visibility or access to that folder, any search they perform won't show anything at that. Yeah, Yep.

Andy Lambert 45:48 Yeah.

Don Middlebrook 45:56 Yeah. OK.

Andy Lambert 45:59 There's that and then there's also you got at the at the RBAC role based access control level with what Chris is talking about. And then you also have page template policies that can also define what what Dan paths are allowed and then you have it at the component level, right?

Don Middlebrook 46:17 Yeah, OK.

Andy Lambert 46:18 In the component dialogue. Hey, hey Chris, can you talk about before? Well, let me see if there is one last thing and one on this. Oh, two things. I actually have to step away for just a minute, but I'll be right back. But Chris, you can take the con and talk about.

Don Middlebrook 46:20 OK.

Andy Lambert 46:35 In terms of this restructuring and knowing that the customer, they have dynamic media provision that they bought it, they're they're at some point ideally going to be implementing it and using it in their authoring.

Speaker 1** 46:38 Mhm. Mhm.

Andy Lambert 46:51 Can you talk about like as far as restructuring and stuff like considerations for dynamic media? And then the other thing if I'm not back in time is renditions. So if you want to share your screen or maybe talk about renditions, I'll be right back.

Speaker 1** 46:59 OK. OK, yeah, all right. So dynamic media. One of the things I'm seeing right off the bat with the what you have going on here is duplicate file names. Even across different folders, you can't have duplicate file names with dynamic media. I mean, you can, but it just gets complicated and confusing because what's happening under the hood.

Don Middlebrook 47:14 Mm.

Speaker 1** 47:24 Is when you know for as an as an example logo dot JPEG, which a lot of people have, you know at least one asset that's name that right? You know. So if you have that in folder A and then in folder B of another logo dot JPEG, but they're different when you go to dynamic media, what's gonna happen is you know one of two things depending.

Don Middlebrook 47:33 Yeah.

Speaker 1** 47:44 Depending on your setting, the default setting is the latter time. You know an asset is synced to dynamic media is going to append a dash one to the file name, so you'll have a logo dash one dot JPEG for instance, right? So. And you won't see that in the dam. But what that will what will happen is is when you use that asset in a dynamic media component on a page, Dynamic Media just handles it in the background and knows this is actually named logo dash one in dynamic media and it'll link to the correct one but.

Don Middlebrook 48:08 OK.

Speaker 1** 48:17 It can lead to confusion, especially like troubleshooting the road. It's like OK, I'm updating logo dot JPEG, but it's not updating and that's because it's now named logo dash one in Dynamic Media and it can get to be a mess. Another setting is across all folders. The latest one will just overwrite the other, so the last.

Don Middlebrook 48:20 Right.

Speaker 1** 48:36 Last time you uploaded logo dot JPEG, it just overwrites the previous one in whatever folder it is, but that's a setting that you set, right? But it's gotta be something along those lines. You can't have two logo dot JPEGs in dynamic media because dynamic media does not pay attention to the folder structure at all, right?

Don Middlebrook 48:47 OK. Right, OK.

Speaker 1** 48:57 It's a flat structure, right? So you just have an image URL that has a domain prefix to it and then the asset name and then modifiers after that. That's it, right? So there's no folder reference. So keep that in mind when building all this out. You don't have to worry about folders and naming. A lot of organizations are worried about the.

Don Middlebrook 49:07 Oh.

Speaker 1** 49:16 Folder path being in the image URL, you won't have to worry about that, but you do have to worry about duplicates and and that is definitely a a concern based on what I've seen so far and what you guys have going on here. Yeah, so yeah.

Don Middlebrook 49:23 Right. Yeah, yeah, yeah. I I I think that might not be, you know, a future issue once everything's cleaned up because the duplicate names that I was talking about are are the same image, not really the same, you know, two different images with the same name.

Speaker 1** 49:35 OK. OK.

Don Middlebrook 49:46 Because we we we will, you know, work on on that naming structure. But right now it's like I had moved all of those into the same directory and whenever I used the move tool, it appended A1 or a two or a three at the end of it, not a dash, but.

Speaker 1** 49:54 OK. In the dam, yeah, yeah.

Don Middlebrook 50:05 Um, just a in the dam. So yeah, but you know, in the end, but.

Speaker 1** 50:09 It's not, so it's it's not as bad when it happens in the dam, you know, because the assets, AM assets will allow you to have, you know, the same file names in different folders, right? Logo to JPEG exists and all over the place, right?

Don Middlebrook 50:14 Mm-hmm. Right. Yeah. Yeah. Right, right.

Speaker 1** 50:41 That's good. The other thing too is to think about your folders in a sense of what you want to be in dynamic media and what you don't, if that's in fact a situation, because you can set it to where everything in the DAM syncs to dynamic media and then whatever's published is published. Facing. Publish in dynamic media as well, right? So there's two layers to dynamic media. There's syncing and there's publishing, right? So when you put a dam in the, when you put an asset in the dam, it can either not sync or sync the dynamic media, and then it can either be published or not published in dynamic media based on this published date.

Don Middlebrook 51:03 Mhm.

Speaker 1** 51:21 In the DAM, right? So you just want to keep that in mind, right? It's much easier if you just have everything sync, everything just syncs to dynamic media, but it's only published in public facing when it's published in the DAM, right? That way because let's say you have a 50 MB or larger couple GB image for whatever reason.

Don Middlebrook 51:31 Right. Right.

Speaker 1** 51:41 Reason. You know, and you want to get it published. If in fact it's not synced to Dynamic Media and you hit publish, then it's got to sync it, which may take a little bit of time and then it's got to publish it, right? So, but if it's already synced, then the publishing is instant, right? So you know, so that's one thing to think about and that's the setting, you know, once you.

Don Middlebrook 51:55 OK. OK.

Speaker 1** 52:02 If you get to the point of configuring dynamic media in your prod instance, which I saw is not done, then yeah, you would, you know, we can walk you through the setup and configuration around all that, right? Yeah, yeah, yeah.

Don Middlebrook 52:09 Right. OK, OK, 'cause I'll need that, yeah.

Speaker 1** 52:19 Yeah, dynamic mean is a whole other beast for that. And then you know you have your your dynamic renditions that are served on the fly in real time, right? You know you don't have to worry about, you know, setting up.

52:23 Oh.

Don Middlebrook 52:30 Yeah.

Speaker 1** 52:34 Any static renditions, but are you guys using static renditions right now?

Andy Lambert 52:39 I was thinking, Don, if you want to share your screen real quick and just show like what how you've been going about trying to do these renditions and maybe Chris can give some pointers here in the last few minutes of the call.

Don Middlebrook 52:39 Yeah. Yeah, I just created one and it didn't really apply, so I have to remember how to get there. Hold on a second.

Andy Lambert 52:54 You got the master on the line with you. He can tell you in two seconds.

Don Middlebrook 52:54 Come on.

Speaker 1** 52:56 Yeah, OK. Where you going?

Don Middlebrook 53:00 Um. I gotta get in there. Um, I think there's on prod. OK, let's see. It's not. It's not the right screen.

Speaker 1** 53:24 Seeing your Yeah.

Don Middlebrook 53:25 Sorry. Not too many things open here.

Speaker 1** 53:31 That's common, yeah.

Don Middlebrook 53:32 All right. OK. That would be. It was under assets, right? Um.

Speaker 1** 53:39 Yeah, to set up renditions, that's that's under the processing profiles there. The second panel, yeah.

Don Middlebrook 53:46 OK, yeah, yeah, so. Did I create these? OK, this is maybe not where I created something.

Um. Oh yeah, let's see create. Is this the right place 'cause I don't remember this.

Speaker 1** 54:02 Yeah, yeah, this is where you create renditions, the test, and then you'd add a new rendition there, and that's where you put in the width, the height, and the format you want and the quality of the suit.

Don Middlebrook 54:03 Alright, let's do test. OK, I went OK. I went around a different path to do something, so I'll

have to like go through this again on my own I guess. But if I created this one right here, go ahead.

Speaker 1** 54:23 Yeah, so you create your rendition. Like for instance, for rendition name, just put, you know, sample or something like that, you know, just put a name in there, you know. Well, that's your profile name, but as a rendition name. But that's fine too. It's fine. Doesn't matter.

Don Middlebrook 54:30 Yeah, sample and oh, OK. OK. All right. Sorry.

Speaker 1** 54:40 Just walking it through you so you know how to to build it out and apply it.

Don Middlebrook 54:42 Sample choose JPEG, say it's 500 by 500.

Speaker 1** 54:46 Yeah, exactly. And then if it's a compression format like JPEG, then you can do those settings there. Just leave that. You want all images. You don't want, you know, videos or applications. So that's all set up for you up the, you know, by default there. You typically don't have to mess with these.

Don Middlebrook 54:49 1280. Oh yeah. OK, so leave that there.

Speaker 1** 55:04 Yeah, and the JPEG compression right now is set to 85 quality, if that's good for you. I mean, you can adjust that obviously. So, so then what you would do for that rendition, you know you can add as many as you want. Then you hit save and then you go to the folder level, the parent folder level that you want to apply all those renditions to.

Don Middlebrook 55:05 OK. Yeah, it's it's fine, yeah. Mhm. Alright, so. That means. Alright, so let's just say to it on corporate whatever. I'm not gonna do it right now.

Speaker 1** 55:42 Yeah, so let's say you wanted to do corporate and everything, all the child folders and everything. You do that and you select properties.

Don Middlebrook 55:43 Yeah. Yeah. And is it here? No.

Speaker 1** 55:53 And then Yep, processing profile right there. See the second one to the right? Yep, that one. Then you select the. Well, why is it not showing up? Hmm.

Don Middlebrook 55:58 Uh, OK, yeah. Yeah.

Speaker 1** 56:06 That's weird. Go back over to the other tab that you have open.

Lucas Nelson 56:11 Hey, real quick, Chris, do you do you have a hard stop? And and and Don, if if you're getting value out of this with Chris, totally fine. If y'all stay on Andy, Daniela and I need to drop for the next call, OK.

Speaker 1** 56:15 Yeah. No, I don't.

Don Middlebrook 56:23 OK. Yeah, yeah.

56:26 Yeah. Thanks, Luke.

Don Middlebrook 56:27 OK, yeah.

Lucas Nelson 56:28 All right. I I we're we're gonna drop, but you guys can stay on. OK. All right. Thanks.

Andy Lambert 56:29 Thank you.

Don Middlebrook 56:32 Alright, thanks, Luke.

Speaker 1** 56:32 Yeah, OK. Yeah, do it that way because that that that's kind of odd.

Lisa Cardia 56:34 And the rest of the content team is gonna drop for that one as well. Most a lot of the attendees are dropping for that one.

Don Middlebrook 56:42 That's fine. Thank you.

Speaker 1** 56:42 OK.

Lisa Cardia 56:42 Thank you.

Speaker 1** 56:44 Yeah.

Don Middlebrook 56:45 I mean.

Speaker 1** 56:46 Yeah, so do it there. Go to apply to profile to folder and navigate to that. Any of those just do like cafe or.

Don Middlebrook 56:55 Yeah.

Speaker 1** 56:57 Corporate whatever you whatever you were doing. Hit apply. Yep. Now go back to the other tab and go to that folder and go to properties and see if it applied it 'cause it should.

Don Middlebrook 56:58 Yeah, and then just apply. We could cache properties.

Speaker 1** 57:13 Go to asset processing. Are you in prod on both? Is the first time in prod?

Don Middlebrook 57:19 Oh shoot, it stayed. That's why. That's why I just thought it was wrong. Too many, too many things here. OK, now this should work.

Speaker 1** 57:21 Oh, there you go. That's why. Yeah, OK. Yeah, now I like to navigate to the folder and set it there, but you can do it in either place. But yeah, and then go to properties and asset. There you go. So now you have that sample and then what what happens is any asset you add in that folder or any child folder from this point forward would get those renditions.

Don Middlebrook 57:31 Uh. I did. Yeah.

Speaker 1** 57:50 If you want assets in that folder that are currently in there that have the renditions, you have to reprocess. Yeah, yeah, you have to do that.

Don Middlebrook 57:53 You have to reprocess. OK, so. Let's see, photography. Reprocess.

Speaker 1** 58:06 Yeah. Yeah, another thing real quick too, just to kind of let you know that under that the root level when you're navigating the folders that has that bind similar that if you've got smart tags on all your assets and you process them with smart tagging.

Don Middlebrook 58:22 Mm-hmm.

Speaker 1** 58:28 That's helpful in finding all the assets that are similar but crop different.

Don Middlebrook 58:34 Yeah, I I've used that. It it doesn't OK job from from what from our asset perspective. So um, it doesn't do all of them.

Speaker 1** 58:40 Yeah. Yeah. The only way that works though is if the all the assets that you're you're hoping to find have been processed with smart tax.

Don Middlebrook 58:51 OK.

Speaker 1** 58:52 Sample dot JPEG. So there's a rendition, yeah.

Don Middlebrook 58:53 Right, right, right. There's that render. OK, OK, that's where I was. OK, I'll have to go back and see what I did before cause that wasn't OK.

Speaker 1** 59:03 Yeah, you might have been editing. There's another way that used to be a legacy way to do it in the workflow for asset processing and but you don't want to do it there.

Don Middlebrook 59:12 Yeah. Mhm. OK, so just right.

Speaker 1** 59:16 Yeah.

Don Middlebrook 59:19 Yeah, was it first? OK, all right, sample. OK, all right, that's good to know. And I guess that with that said, we now we create these. Now how do I apply them to an asset that's an?

Speaker 1** 59:20 Processing from file. Yep. Yeah. Well, if you're using the component, if you're using an AEM component, a default, not a custom component. And just because I can't speak to whether the custom component supports it or not, but a default out-of-the-box image component in AEM site building will automatically select the rendition that.

Don Middlebrook 59:34 But.

Speaker 1** 59:50 That is appropriate for the placement.

Don Middlebrook 59:53 Oh, it automatically do it. OK.

Speaker 1** 59:55 Oh, Mac does it. But if you have custom components where you didn't utilize that functionality in the code, then it may or may not do it right. So that's kind of you have to build in that support into the component that you're placing it on. There is a direct URL that you can manually do to get to that.

Don Middlebrook 1:00:03 Yeah.

Speaker 1** 1:00:14 To that rendition, but it it's not straightforward.

Don Middlebrook 1:00:15 And then. OK.

Speaker 1** 1:00:18 It's a little cryptic.

Don Middlebrook 1:00:21 OK, alright, so just reiterate. So if I created a bunch of different renditions here and this says it's it's still static, not OK, OK.

Speaker 1** 1:00:23 Yeah. Oh, oh. Yeah, it's static. Because it it actually creates a binary file, a separate binary file under the hood and stores it for that rendition. That's what it means by static. You're actually the more static renditions you create, the more copies of that asset you're creating under the hood.

Don Middlebrook 1:00:41 Oh, OK. Mm-hmm. All right.

Speaker 1** 1:00:50 OK, that's what's so good about dynamic media is there's no binary stored as generated on the fly. Yeah.

Don Middlebrook 1:00:53 Right. OK. OK. So yeah, when we get dynamic media implemented and then that's probably what we need to be doing and then we'll have to have that.

Speaker 1** 1:01:04 Yeah, and utilizing image presets because image presets function a little bit like what you're kind of used to with with the static rendition where you can name a preset sample or whatever. Or typically you name the preset for the the use case or where it's being consumed on your site like a carousel or a banner or something.

Don Middlebrook 1:01:15 Mhm.

Speaker 1** 1:01:23 You name that preset and in that preset you define all the width, height parameters and the format and the compression and all that stuff, right? So then in the image URL you can just reference that preset because the other way to go about it is actually hard code all the modifiers and the parameters into the image URL into the component. But if you do that.

Don Middlebrook 1:01:24 Yeah. OK. K.

Speaker 1** 1:01:43 You wanna make changes and you have to update the component code and do code deployments and all that. But if you reference a preset name, if you reference a preset name and then you need to make changes, you just go edit the preset and republish it and done. Everything referencing that preset gets the new parameters, right? So yeah.

Don Middlebrook 1:01:47 Yeah, we don't wanna do that, yes. OK, OK, alright, so.

Speaker 1** 1:02:02 Yep. But yeah, for time being, I mean static renditions should help you out in in a lot of cases and as long as you're offering in in AEM, you know it'll it'll just do it for you.

Don Middlebrook 1:02:15 OK. All right. That sounds good. Yeah. OK.

Speaker 1** 1:02:16 Yeah. Cool. Any other questions? I'm sure we'll have a follow up calls and talk more about all this good stuff, yeah.

Don Middlebrook 1:02:21 Yeah, that's cool. Um. Yeah, I think, I think it's good for today. I appreciate your time and then looking forward to us having the dynamic media because that's really what I wanted to really wanted to cover, but since we don't have it implemented yet.

Speaker 1** 1:02:31 Yeah, no problem. Yeah.

Don Middlebrook 1:02:42 Then we just wait.

Speaker 1** 1:02:43 Yeah, I mean it's it's it's connected on your lower environments, but your prod just isn't connected. It's not set up.

Don Middlebrook 1:02:50 Yeah, yeah. So, OK. All right. Well, thank you so much.

Speaker 1** 1:02:53 Alright. OK, talk to you soon. Bye.

Don Middlebrook 1:02:57 Alright, alright, bye.

Session: Shared Data — 2026-02-19

SHRSS Adobe Knowledge Transfer-20260219_130217-Meeting Recording

February 19, 2026, 6:02PM

1h 31m 52s

Lucas Nelson started transcription

Lucas Nelson 0:09 All right, we're off and running. Daniella, if you want to kick us off, thank you.

Daniela Tea 0:12 Yep, thank you for that, Luke. Hey everyone, good afternoon. I wanted to start today's session with going over just a couple of updates from yesterday's meeting and I am planning on sending an e-mail reply. To the landing page meeting from yesterday, just so that way anyone who wasn't able to attend will still be able to see those answers. But want to provide a few updates. So yesterday there was a question about the component specs page that our team had provided and. I just wanted to share my screen so you guys can see this here. Our team is reviewing this page. You might notice if you guys are looking at the title of analysis under review 219. Just so the team is aware, we are taking a look at this to essentially verify all the information. That's put here and then if you know anything needs to update, we will be making those changes to the information here. But I will be letting you all know when our review is complete. So right now it's in progress. So more to come on this, but just want the team to be aware that that's. Something that we are currently doing. The next thing I wanted to share with the team is there is a question about how to handle vanity URLs for that specific page and I want to show you guys how that is done after I talk to the tech team. So right now I'm in the product environment I'm going. To navigate to the International Women's Month page that I believe the authoring team have been working on. So let's just take a quick look at that. So this is my copy. Let me find the other, the actual version. Here it is. OK, so you can see it's still not published. So we did not publish these changes, but we did add the beta URL and so I just wanted you guys to take a look at how this process is done. O I'm going to select the page and click on properties. I'm going to scroll down here. So after talking with the team and I and we confirmed what was the original rule that was captured for slash woman. So you'll notice that's not here present in the Vandy URL section of EEM because that's already being handled. At at the dispatcher level. And so for our best practices, typically you

know if something is being handled somewhere else, you don't want to replicate it or duplicate it with an AEM. However, since this is a brand new rule for this empower women URL, that's why you see this one here. So the way that we added the beta URL as you can see is you need to put essentially the complete page path. So you'll see content SHRSS corporate Hard Rock EN. That's the exact same section that this specific page is, although it's hard to see with the percent twos 2FS. But it's in the same exact location. But then at the very end that's where we put what we want the VAD URL to be empower dash women and then also putting that extension of dot HTML. The reason why you need this dot HTML and there's as I mentioned yesterday there were some. URL shortening rules that were put in place and so that's why because that rule is looking for an extension to then remove. That's why the when you put this bid URL in place here, you do meet this extension in order for it to also pass that rule. So moving forward, as the team needs to add additional van URLs, this is the format it should be. Again, the page path is here of where the page is located and then also just the desired URL of the page with the extension. And yes, I can add multiple. In the case, as mentioned before, the reason why I didn't put the women one here is because that's there's already a rule, existing rule that we saw that was in place that is active right now. So I'm going to pause here to see if there's any questions about vanity URLs, the process to do it and essentially where to go for. Accessing this.

Edwin Aquino 4:28 Yes, Daniella, can you explain what the redirect vanity URL checkbox does as well?

Daniela Tea 4:33 Sure. Let's see. I noticed that my tech team member did not put this in place. Let me get back to you on that one, Edwin, I believe. I don't want to give you the wrong information, so I'm going to. I'll get back to you on that. In this case here though, it was not needed and that's why we didn't put it there, but I'll confirm the exact. Reason and the use cases for when you would use that.

Edwin Aquino 4:55 OK. Thank you.

Daniela Tea 4:57 Yep. Anything else? OK, all right. So to be clear, this one is in place. So whenever that page is ready to go and ready to be published, you will not need to add any additional data URLs. However, of course, if there's something else, another one you need to add, please do so and then make sure to publish the page. All right. I'm gonna hit cancel. All right. OK. And then the last update, there is a question about the card. Yes.

Lyon, Rick (Director of Digital Experience)** 5:25 Hey Danielle, sorry I had to click all the terms and everything on that

last screen you had with the my understanding correctly, you can have multiple vanity names for that page and they'll all link to it. Oh, that's pretty cool because they I ironically with this one.

Daniela Tea 5:28 Yeah, go ahead. Yes, that's correct. Yes, that's correct.

Lyon, Rick (Director of Digital Experience)** 5:43 We had noticed one URL was in the PDF and a different URL was in the in another image. So it's like in how many different iterations are there possibly floating around, you know, before the program launches. So if we had the ability to add multiples, that would be pretty cool.

Daniela Tea 5:55 Hmm. Yeah, you are able to add multiple. I don't. I think the only other I'm trying to remember what we had saw. So to be clear, there are there's another location where like redirects of ADRLS can also potentially be managed those individual roles that have been. Available in Visorj, I believe had just gotten migrated over and they're in our dispatcher and that's where I believe like the tech team would be managing those. So I think there are actually additional redirect rules are probably in place right now, Rick, but but for like the ones that you, you know don't exist that this is the location.

Lyon, Rick (Director of Digital Experience)** 6:29 Mhm.

Daniela Tea 6:39 Where you would want to put them.

Lyon, Rick (Director of Digital Experience)** 6:41 Yeah, the landing page kind of thing, because that happens some you know where they want, you know, it's a really long page name, but in print they don't want to print that. So it's just like an abbreviation, 3 letters or something. So be able to add that quickly here as people.

Daniela Tea 6:47 Yeah. Right. Absolutely. Yeah. Yep. So yeah, sure thing. All right, so the follow up I have is for the use cases for redirect bid URL checkbox. I'm gonna hit cancel for right now and then we wanted to talk about the updates.

Lyon, Rick (Director of Digital Experience)** 6:56 Thank you.

Daniela Tea 7:10 To the card carousel. All right. OK, so previously it was asked about what the Adobe response was for why the UI was getting cleaned up. After talking to my team, what we had noticed is that, excuse me, based off of the requirements. That we had seen previously and I can get the exact ticket number in a second. As mentioned before, desktop and desktop and tablet typically would have the same sort of view and mobile would be handled separately. This particular component previously had this separated, however. After that specific requirement was made, what we did was we our understanding was that card carousel and tablet should always be two if it's not a full width carousel, if it's a full width carousel, which I will. Let me see if I can show you when I say full width carousel, I'm talking about within the hero banner. Let's see if I can find an

example. Something that looks kind of like this. If it's full width, then you're only going to show one at a time. However, for this instance here, the fact that I have one this, this particular number does not actually do anything for tablet. That's the reason why our team had responded saying that this particular. Field doesn't actually need to be here because there's already logic baked in without the author having to configure anything. So if I were to take a look at this page here, we see three here, we see two and this would technically be tablet and then we see one. So what's being respected is the. Three and the one that I've put into place, but that middle number for tablet, there's nothing like this does not take into consideration what this value is. So if I were to put this as five, you can see nothing will happen. It'll always be too. And so you know, totally understand if that's not something that is desired, that's where during the gap portion, if that if that specific functionality for a tablet needs to be added again. So that way this actually, you know, a tablet can have something different. That's something that we would want to make sure is covered in the gap. But when we said we were going to clean up the UI, we were saying we were going to remove this field because currently it does not have any bearing on how it's displayed to the end user and there's already logic that was added to always show as to. All right. OK. So those were the updates that I had from yesterday. And any any questions? Yeah, Don, I see your hand up. Not sure if that was intentional or not.

Don Middlebrook 10:00 It was not intentional, sorry.

Daniela Tea 10:02 I just, I just happened to glance and see and I was like, oh, OK.

Don Middlebrook 10:06 Well, I was gonna do the React thing and I hit the wrong thing, so never mind.

Daniela Tea 10:09 No problem. Thank you. OK. So yeah, any other questions about the page and actually with regards to the author team, you know, I know that yesterday it was said that there could be some additional changes. So I was just wondering if. There is anything else that you guys wanted to talk about with this specific page for today?

Edwin Aquino 10:36 I believe there's not been any large changes yet. It's still possible for it to be changed, but I I don't. I'm not aware of any large changes yet, so we should be OK for now.

Daniela Tea 10:38 OK, yeah, understand. OK. OK. Thank you very much, Edwin, for that. All right. OK. So let's jump on over then to the, the, the agenda that I had prepared for today. So as I've been talking to you guys over the past couple of weeks, you know I.

Edwin Aquino 10:47 OK.

Daniela Tea 10:59 I definitely understand that there's going to be a lot of instances with shared data. So essentially if something on the hardrock.com website, you might want to also see that on the careers website. I think we've identified a couple of examples of that and so I think that it would be good to understand like how to identify. These particular pieces of data that are going to be shared across multiple websites. Which is the best time to use a content fragment? What's the best time to use an experience fragment? Once you use a content fragment with an experience fragment or even experience fragment with an experience fragment? And so I just wanted to review some of the things that I've identified that could potentially be useful as the team is authoring pages moving forward. As you guys know, we had a set number of content fragment models that we had created. However, that doesn't mean that that's all you. You guys will end up using. There's gonna be a lot of times where you're looking and you're seeing, oh, this data has some sort of structure, it's repetitive. We should create a content fragment model. So I just wanted to show you guys like some of the things that I identified and how I would make that into either an experience fragment or a content fragment and how that could potentially be. Used across multiple sites. In addition to that, you'll notice here I've called out the components that are used specifically within the header and our footer, which are some very obvious examples of experience. I believe we actually have gone through these in a previous session before when we were reviewing the home pages for corporate, but we can certainly just take a look at them again today since we are trying to review experience fragments. And if you guys have any questions about those, we can certainly get into those too. All right, so I'm going to actually start now with showing just two examples of what I could think would be some good shared data. Last week we talked about this particular page and and there's actually a very similar page here on the. Careers website. However, there are also some differences that we noted. Some things might be shared, some things might not. So now obviously this is going to be more of a a hard rock would need to decide are these pictures truly supposed to be different on this page or would it make sense for them to be a one-to-one match? So depending on that answer, that would actually depend on whether or not this would be a good candidate for a content fragment or an experience fragment. If these were obviously one to one match, say you always want to be in this card format, you always have the image and this text here that would make sense to be an experience fragment. You would then. Use the experience fragment wherever you need to show this particular card, and then you'd only change it in one location. However, because I'm seeing that there are some slight differences, but some of it's shared, what I would say if that was indeed intentional is that it might make sense for this. To be actually a content fragment with a content fragment model. So let

me open up down here and I went down to the integration environment just so that way people aren't accidentally using this and what I did was I actually created a. New content fragment model called bio. I'm just gonna navigate to where I have put my information. Was it careers? Oh, oops, sorry, I'm not in the DM. Here it is. OK, so going to my CF folder and here I have a folder called Biography because I created something called a biography content fragment model. I'm going to have you guys just take a quick look at it and then I'm going to show you how I actually created it. All right, so clicking edit. So you'll see here I was taking a look.

OK, what are some things that are relevant, you know, that are shared across all these different pieces of of content on that other page? So I'd identified the name. I split it up in first name and last name,

but that could certainly have just been one field. I identified the title, the bio, and then also the image. So you can see here exactly how I split it up. This is the shared structure that I would imagine all biographies. Would use and so all that information that's on here I have now captured as a content fragment. So when I create when I created that content fragment model, here I am in the content fragment model editor and you can see the exact fields that I selected for this. So for my first name I have my text field and I believe this and correct

me if I'm wrong. I do believe you you all probably covered some of this within the training in terms of how you can have different types of fields and also different types of validation. So I'm not going to get too deep into like what each of these fields mean. However, I just wanted to just show, for example, like you know, using the different types of field and what makes sense in this case for an image using a content reference, setting my root path to the dam so that way whenever someone. Creates a new content fragment based off of this model, it will always default to the DAM. If there's a specific location that you know these images always are based off of Don's new structure, then it would make sense to set it exactly where you need it, but just trying to show you how. When creating these content fragment models, the important thing is understanding that the structure needs to be shared across everything that's going to use this, and you want to make sure that you know you're putting the proper validation in place. For example, in this case, I don't want someone to necessarily select like a content fragment here. I want them to only be able to select images. So you can see I I've like essentially put some guardrails in place as I was making this fictitious content fragment model and as additional. If there's additional fields that I need and maybe they they aren't necessarily required, I can add those. In this case I only set the. First name to be a required field, but certainly it's possible that I

would imagine you might want to have first name, last name and title all be required. So that of course is a decision that would be coming from the, you know, the SHRSS team, probably the product team or so on

determining. When, when should something be required, what should these fields be, etcetera, etcetera. But this is the way to essentially build it out and to make sure that you're essentially guiding your users to be able to fill this out properly with the specific validation and things in place. So I'm actually going to pause here as we take a look at this editor to see if there's any questions about how I essentially built this fictitious model. All right. OK. All right. So let's jump back then to the actual content fragment I built based off this model. All right. So if this were a real life scenario and say we this particular content fragment model has been approved by everyone as in like these are the. Exact fields we want and the way we want them. Simply as a content author, what I would be doing is I would be getting all that information for each one of these, creating a new content fragment, filling out the fields, etcetera, etcetera. And so then these would all be stored as content fragments as opposed to right now. I believe these are probably either card or. Text components. So moving forward, what I would need to do is instead of editing anything on the page, I would be editing it from a content fragment perspective. So right now on the hardrock.com corporate site, I believe you have to edit directly in the page. But if you were to use a content fragment model, as you guys know, you would be editing the information here, saving and publishing, and then that is what would determine what content is being displayed on the page. So looking at. This here we can see one of the reasons though why I chose a content fragment model versus doing an experience fragment is because there's things that are not exactly the same. So in this case here again, this is a card. This is instead showing the shared fields. These two and the shared fields here you know is right here. The image is different. There's a read bio button here so that none of that is shared between these two. So within my let me show this here. How do I display these fields on the page though? All right, so I'm going to navigate to just creating a test page where let me see if I can find it. Uh, here we go. All right, so out-of-the-box there is a a content fragment component, and its purpose is to essentially surface information from a content fragment, a stored content fragment. So you'll see here I have a content fragment component on. Here and what I've chosen to display is a the bio field from the selected content fragment that I have. So you have the option of choosing a single text element or multiple elements. This is an out-of-the-box component, so there's been no customization to this. And so this is something that yes, you can use. However, there are certain fields that are not going to work out-of-the-box and would require some some some customization too, for example the image field. The image field is not going to display the actual image right now without any customization. It displays the location of the image. A typical use case though would be for a developer to essentially create a

custom component that is relying on that content fragment. So when we have our content fragment card, if you guys remember, this is a custom component that our team made and surfaced and so it's calling in content fragment models here. And what we're able to do is we're able to pull in the same information that's stored in the content fragment, but we've included a. Additional code to say, for example, display the image or style things a certain way. So I want to be clear that just because you create a content fragment model, it's not going to magically look like a card. There's going to have to be some discussion amongst how you would want that information to be displayed. But out-of-the-box, what you can do with the content fragment model component is display different specific fields that are stored within the content fragment. So I'm just going to call. This content fragment again and just show how if I were to want to display say the title, I could do that here and it it displays my title. If I display let's say a bio, I'll display my bio here. So I can. I also do have some control when it comes to paragraphs. Right now I'm showing everything. Say I just want to show the first paragraph. I should be able to do that. So this is the content. So the content fragment component again is a way to display pieces of text from your content fragment. However, if there's obviously like image fields or things that need to be displayed, that does require some customization.

Edwin Aquino 23:13 Daniela, with this text that we're seeing here, will this at least inherit the the stylings and everything that we have of the website?

Daniela Tea 23:17 Hmm. But inherit the style. So I believe this is. Let me check what that field was one second. Let me go back 'cause there is actually a rich text editor that can be used within the. Content fragment model, but let me check what I have that set to. It should be I believe the body text, right? So like right now this this font should be. Let's see what the font is. It should be whatever the body font is saved within the in the style sheet. Yep, so font family, font family. So Lato, I believe is what the font family is. So when you say inherit, that's it is essentially inheriting whatever was in the style sheet. Does that make sense? OK, Yep. But yeah, let's take a look at this really quickly. I believe I just create. Yeah, so this here is a multi multi line.

Edwin Aquino 24:00 OK. OK, yeah, yeah, I just wanted to make sure.

Daniela Tea 24:16 Text field. However, there is the ability to change it from plain text to rich text, but in this case I didn't necessarily want like the styles to be, you know, people putting whatever. So and again this is an example, but also another decision. Um, or something to consider when you're planning out building out your content fragment models. Right. Um, so with what we're seeing here, any questions about why I would use a content fragment for this and and essentially the shared pieces versus an experience fragment?

Edwin Aquino 25:00 I do have one question regarding the actual creation of the content fragment. Now is there any way for us to include a default image for that? Like let's say when we're creating the content fragment model, are we allowed to create put in a default image that's going to be there no matter what and we have the option to override that image?

Daniela Tea 25:03 Sure thing, Yep. Mhm. So we do have a default value that can be set. So I believe you should be you should be able to select like a. In this case this is keeping in mind this is a content reference which I'm using for image. I should be able to set that default value and then as it as I'm creating new content fragments that would be there. And then I would be able to replace it. But because again, there's no custom component associated with this content drag model, you wouldn't actually be able to see it right now. But yes, you are able to put default values in place.

Edwin Aquino 25:51 But any specialized content that we have, any kind of a special components that we have would be able to show that defaulted image.

Daniela Tea 25:59 Any special oh oh, so it's like, um, you're saying like if they're.

Edwin Aquino 26:03 Like if we're using a card component or something that references this content fragment, it would show that default image.

Daniela Tea 26:09 There's a card to put. So the what would happen is that say this image field would essentially inherit whatever was stored in the default value. Does that make sense? Yeah, I think that answers your question, right? OK, perfect. Yep.

Edwin Aquino 26:18 Yeah, yeah. It should be good.

Daniela Tea 26:25 OK. Uh, any other questions about the content fragment model? OK. All right. OK. So let's take a look now at another example that I had identified as I was reviewing the sites. So I think it's probably the same day when we were reviewing careers, we had noticed that. There are benefits on, of course, the benefits page, but then also on the home page. However, you'll notice there's a slight difference. While essentially the image and the title under each benefit is the same, you know there's some text that's present here, but not present on here. So what is the best way to handle something like this? Since the presentation is essentially the same with just one thing removed, this seems to be a good candidate for an experience fragment. So let me show you guys how I would do something like this. Now I'm going to go up to the stage environment since I have some examples there. Previously again, I was on int just because I didn't want anyone to actually use this thinking it was real. So when you're on stage or prod, you're not going to see this, so don't be alarmed. It's just this is for training purposes. But now that I'm in stage, let's go to our Experience Fragment

section. OK, where's my training stuff? OK, here we go. So I started making just one example, the annual bonus eligibility, and let's take a look at what I have done. OK, so here you can see I have my image, I have my text, I have my other text which is essentially what we see here. So I've identified all the all the parts to like what this benefit would require however. I also know that I don't necessarily want this piece to be on the homepage, but I do know that if I were to change, say, the title or this particular title portion for annual bonus eligibility, I want to make sure that gets pulled out to both pages. So what I've done is I have created a variation as live copy. So what that does is once I decided what I want the original to be, I then have created a copy. We can do another one create variation as live copy. Let's just call this test. And then it's going to be test and I've created. I've hit done. So here's my copy of test. It's the exact same thing. So if I don't want this portion here, but I want everything else to be the same, I'm going to select this. And I see that there's a button called Cancel Inheritance. What this means is now if I cancel this, I say yes, I don't want that. If I cancel this, anytime I make an update to annual bonus eligibility, this part will not be updated. The other parts will be, but this portion won't. So let's actually test that and we're going to put this is not inherited and see what happens. OK, going back to my original copy, the annual, I'm sorry, the original experience fragment annual bonus eligibility. Make a change to this text. And I'm going to hit done and right now nothing's going to change because I haven't rolled anything out. But if I select this, you'll see that there's this button that says roll out. I have the option to be able to roll it out to all the variations that are essentially inheriting from this or. Hit roll out to and I can select exactly which ones I want to have rolled rolled out to. So in this case I was messing around with my test one, the homepage one. I think that's something I probably made earlier, so I'm just going to uncheck that because I don't. I personally don't want that to be updated right now, but I do want test to be updated. O I'm selecting this. I'm going to hit roll out. I just happened now, so I'm just gonna hit now. I'm gonna hit continue. Alright, so if we were to go to annual bonus eligibility, the update I made for training is here and I go back to test, you'll see the training has been updated and this text was not touched because I canceled that inheritance. So what I'm trying to show is that for this particular section here, right now everything that I believe is probably just on the page, so you're editing it there. However, one thing to consider is this could potentially be moved to an experience fragment. You would use the experience fragment that's that's here to be displayed on this page and then on this page here the home page you would likely want to use the experience fragment for test. Pretend this is this part doesn't exist so that way it displays exactly the same and then as as say on you know something changes like. The image here or say the title here, you only have to

change it in one location, that original experience fragment and then roll it out to anything that's copying from it. I'm going to pause here to see if there's any questions about this or any thoughts about, say, some other use cases. I've identified some other use cases I think could be good for this. I just want to hear any questions first.

Edwin Aquino 31:58 So regarding this component, is there any way we can break the entirety of it being a variation? Let's say for example we have it as a variation where you have one that doesn't have the text, one that does, but we decide to change the order on one page. So we'll have annual bonus eligibility on the 2nd row instead of the first, but we want to keep.

Daniela Tea 32:05 Mhm. Mhm.

Edwin Aquino 32:18 Bit the same on the other page. Is there any way to undo that and break that connection so that we can just use it as a regular component itself or we would have to redo the component?

Daniela Tea 32:26 Let me let me confirm what you said, just to make sure. OK, so taking a look at this, we're saying what if we actually want this to be underneath? Is that correct? For like a variation of this to be underneath.

Edwin Aquino 32:40 Um. Let's say we wanna change the position on the page itself, right? So we're not changing the component, but we're changing the position. Um.

Daniela Tea 32:46 Oh, the page itself.

Edwin Aquino 32:53 Is there any way we can just maybe break the component itself or there's no reason to break it? We're OK with the way it's set up.

Daniela Tea 33:02 When you say component, to be clear, the experience fragment is containing right now it's containing 3 different components, right? So I have my image, my text and my text. I can drag. I actually can drag pretty much anything into here. I can even actually add an additional experience fragment and we can talk about when this would be a good use case for this. So I guess I just wanna confirm what like what you're asking because this is essentially like a mini page, right? Like you're adding your components here, you're able to adjust it. And then what happens is on the actual page that you're authoring, you would add your experience fragment component.

Edwin Aquino 33:30 Yeah.

Daniela Tea 33:41 Let's do that right now. I'm gonna find a test page and just add the experience fragment component. Experience fragment I just built. I think it's.

Edwin Aquino 33:50 Basically, to clarify it, but if we just wanna break that connection from the experience fragment and have it as its own component, would we have to recreate the component?

Daniela Tea 33:52 Yeah. As its own component, as in like do I? If you want this stuff here that's stored here to just appear on a page without being an experience record, what would you need to do for that? I see. OK, one second. So going back here.

Edwin Aquino 34:08 Correct. Yeah.

Daniela Tea 34:16 1st I'm just gonna add the experience fragment so you can see that reference on a page and then we will address what you just asked. So I added my experience fragment component. I'm going to then find the specific variation that I built. Where is it? Uh, yes, here. OK. OK, so here's a variation I built. So you're saying, oh, but I actually want this to be, you know, not with an experience for everything. I want everything to be here. So I guess one way you could do that is you could theoretically copy out the different parts and just put them on the page, right? You would have to likely do some formatting, but you can. And certainly because again, this is all actually for the ease of use, I'm going to put everything within a container and then copy out my container. So one second please. This one here. OK O for the ease of use, I'm going to copy out my container. I'm going to put this here. Yeah, so you could see this. This is actually now. Here we go. Yeah, let me refresh the page just to make sure that I'm able to access. Here we go. So now instead of me editing it within my experience fragment, I just copied over the components, slapped it onto a page. This now has no. Inheritance associated with the experience fragment. It's, you know, like this could be anything, right? So any rollouts and anything that's made to this, it's not going to affect us at all because now it's just three independent components within a container. Is that what you were you're asking?

Edwin Aquino 36:07 Yeah, that's exactly it. Just wanted to see if you can break the association. That's all.

Daniela Tea 36:09 OK. Yeah, yeah. So two ways. Again, there's two ways. One is when you have a variation, you can. If you do not, if you actually don't create variations live copy, then there's actually no inheritance. It's essentially like grouping things together of of. Like like experience targets, but variations live copy. There is that ability to break the inheritance within the variation by cancelling it or like I just showed, just copying out the components, slapping on the page and now it's local on this specific page only with no inheritance. OK.

Edwin Aquino 36:45 OK, perfect.

Daniela Tea 36:45 Yep. Any other questions about this specific experience fragment? And for the purpose of this, I actually want to show. Sorry, I'm going to add the other variation as well. So we can see how both of these, how this would essentially work. Where is it? That is test, right? Yeah, OK, so you can see how like in this case this would go on one page, this might go on another page, but again. Anything that was marked as inherited will only have to be changed in the original experience from it, OK. All right. OK, let's take a look at. Some other examples that I was noticing that could be potentially good candidates. Sorry, trying to get my bearings straight on here. OK, so I had mentioned earlier, hey, you might actually want to use an experience fragment with an experience fragment, which sounds crazy, right? However, not always. As we know, footers and headers are all experience fragments. I believe that the the authoring team, you guys have probably had to edit the headers and footers on maybe the corporate page and probably also when you review the careers page, there might be some. Updates and you would do that by going to the Experience Fragments section. Now something that I was noticing as I was reviewing is that sometimes the copyright here I notice it's not shared across all the sites. There's some different variations of it, however it seems like the. Lines of businesses all seem to have the shared copyright for it. So like, for example, hotels might have a certain copyright, like it might say like something about privacy in this statement here, but then I noticed on cafes might be a little different. So when I saw that, that to me seems like it would be a good case to make, say like. Different disclaimer experience fragments and then within your footer, adding that experience fragments to the footer. Since right now the way we have this structured is that every single every single cafe, every single hotel, each one has their own. Header and footer, right? So as an example, but each one has their own individual header and footer. So right now what you would have to do with this not being an experience wagon is you or the property owner, I suppose would have to make sure that the header and footer is updated. With the correct text. So anytime a year changes or anytime if something ever changes here, you'd have to update that for every single property. What can be done instead is say we had in our hotels, we had another experience fragment that was just called disclaimer. That disclaimer would have one text field this and then what would happen? This would require some updates, but it would only be one time is within the footer. I'm just going to open this for an example instead of having this text component here, adding that experience fragment there and then pointing to that disclaimer and then. Moving forward from then on, you would only have to change it in one place and then everything that's using experience framing would then be updated. So that's something that I noticed. Again, it seems like you know. You know that that obviously like right now the text, yeah, it's pretty

easy to change it, but if you're changing a bunch, that might take a little bit of time. So just want to call up another example and a way when you might want to consider using experience fragment within an experience fragment, in this case the footer. So while we're taking a look at the footer right now, just out of curiosity, is the team aware of like, you know, any other say any other examples of places where you know, maybe it makes sense to make a content fragment or maybe it makes sense for an experience fragment. Is there anything that? Perhaps at the top of y'all's head that perhaps we can take a look at right now.

Edwin Aquino 41:04 Experience fragment within an experience fragment. Same thing here, just in general.

Daniela Tea 41:07 No, just I guess just in, yeah, just in general like I know for one of the things that I believe will be handled in the future is like say say these these cards. So here this is an example. I believe we identify as experience fragment. I know there's additional logic. However, what would happen is this carousel would be put in experience fragment and then replacing the carousel that's on the page for the experience fragment. So this is a perfect candidate for experience fragments. So I'm just curious. If there's any examples that you guys like to take a look at.

Edwin Aquino 41:54 Believe one experience fragment was wherever we have a specific card on the cafe pages, it would be pointing toward a promotion.

Daniela Tea 42:00 And. Let's take a look at that. Are you talking? Oh, OK, sure. Does that land? Yeah. OK, Yep.

Edwin Aquino 42:05 So if we go to a specific property, like if we go to a specific property page, sorry. Yep. So that third card that we see right there that says Captain Messy, this is shared across multiple properties and it changes for some, but not for all. So that's something that we definitely wanna consider as maybe something along the lines of an experience fragment.

Daniela Tea 42:16 Mhm. Mm-hmm. Yeah.

Edwin Aquino 42:28 That we can customize dependent on the property.

Daniela Tea 42:28 Mm-hmm. Yes, yeah. So like you're like you're saying something that's shared. You said something that's shared, but something that may change but not for all. Is that correct? So like Atlanta might have this. However, the fact of the matter is what can happen is you would replace this card with the experience for.

Edwin Aquino 42:41 Correct.

Daniela Tea 42:50 You would reference the specific experience fragment variation that contains this. And then if you're saying like, say, at least decides they need to change that to something else, and at that point they could, they could replace experience fragment with this instead of this one pointing to something else. However, anything that's still referencing Captain Messi would. Still have that and anything that gets changed in the text here would also get rolled out to all the sites that still reference this. So yes, this is definitely a good candidate for an experience fragment, absolutely. Yeah. OK. All right. So let's take a look now at our. Let's take a look now at the remaining agenda. So we talked about experience fragments when you want to use them, why you'd want to use them. I didn't have that here, but the content fragment model we talked about, you know, like an example of one that I created. And essentially how that could be used for say a custom component that displays content fragment information. Or if you need to just display a portion of text or something, how that would work with the out-of-the-box content fragment component. Let's take a look at some of these other components that we have here, starting with our content fragment card list. I'm going to navigate to my test page. And I believe we are using the content fragment card list. I don't know if we're using non careers, but we can perhaps make up our own. OK, all right, so here is an example of a content fragment card list component. Right now, since this is a custom component, right now we are able to display news and events I believe we had mentioned. I think when we were going over promotions that one of the one of the things that would be beneficial would be to have promotions to be added here of course and also something to consider as you start to identify additional candidates for content fragment models this particular component. Component would likely have to be updated to take that into account. So with the Contra Fab and Carlos component though right now it's just news and events and this is saying OK, I can use a news model or an event model. For my cards layout style, I can display it in 1-2 or three columns just like we have for the card carousel. If you're doing events, you would put your event page based path. This is something that I know you guys are are aware of how it's just that one event page and then it passes in the ID of the event. So this is just that field that says well where's your event page so I know what to pass in and display when someone clicks on on learn more which is the CTA in this case. So I have my learn more text here as a placeholder, no results message I'm able to put. You know there are no news, there's no events, so something custom. So it's this field is open to whatever you have decided to choose for the type number of cards to show at a time. I know we have here. The column layout and so of course depending on what you choose here, 18 cards would make sense for say like a three card layout or a two card

layout, but you know perhaps something like like like. I'm just trying to think of like 99 would only probably make sense for a three column versus 2. So just some flexibility in terms of cards that you want to display in the list and then selecting the list type. We have our fixed list, our root path and our tags. I believe typically what we've been using across the site is root path. So when I select that, that just tells me where within the dam I can pull in those content fragments. So as we remember from our structure in the dam, currently things are set up for content fragments based off of. Of the content fragment model and then the line of business and then the location. I understand though that there could be instances where you might want to show multiple locations. So if there was a certain certain things that you knew you want to show, fixed list might be your best. Option you can select the individual content fragment you want to show here, and so while that may be a little, you know there's like 200 or so, this of course is not going to be something that you would want to do. However, if there's a limited number that's crossing multiple folders, this is certainly a viable option. And then finally, tags. With tags, of course, you're able to select which tags you have applied to those content fragments. So that's certainly another way to be able to show things across multiple folders, as long as you select the root path to be something that's a little higher than. Obviously the obviously higher than on the specific like location. Like right now if I wanted to show Barcelona I could show it at this level. But say I want to show Barcelona and say there was another thing that I want to show that was within Spain. Then I would of course select a higher level. So as long as things are tagged, choosing the tag list type should be able to pull as in. Gonzalo, I see your hand up.

Gonzalo Calasich (SHRSS)** 48:33 So on um, I think on the first option that you have on the selected list type you have the CTA.

Daniela Tea 48:38 This sorry on the select the list type we have fixed list, root path and tags.

Gonzalo Calasich (SHRSS)** 48:44 I think was the first one.

Daniela Tea 48:47 this one here.

Gonzalo Calasich (SHRSS)** 48:48 No, there was one that you were you were talking about the root path.

Daniela Tea 48:55 Let's see root path.

Gonzalo Calasich (SHRSS)** 48:56 That one, that one is this can can the root path needs to be an internal page in Adobe or it can be external?

Daniela Tea 49:05 So this keep in mind that this list is saying I'm building things based off of content fragments, right? So the root path is since our content fragments are stored in AEM, it would be you know a folder that's within here with content fragments, right? So what I'm saying here is I'm building, pretend I'm building this news content fragment card list. Now where are all those news located within the dam? So I would select, yeah, so it's not so much like something you it wouldn't make sense for this to be an external link in this case because I'm just basically saying I want.

Gonzalo Calasich (SHRSS)** 49:32 Gotcha. OK.

Daniela Tea 49:42 To choose, say, all corporate news, or I want to choose all news across all sites by choosing this folder. So what's the root path of content fragments that you want to display? That's what that means. Yep, all right. News default image. This is essentially you know what would display if you didn't have an image for your news. And then here we have some check boxes and so these are gonna be kind of.

Gonzalo Calasich (SHRSS)** 49:53 Thank you.

Daniela Tea 50:09 Conditional. So for example, you can see here location is applicable for events. So if you were to check this and you have me selected, nothing's actually going to display. However, if you were to switch just to events and reset up this component, that's when location would appear. Categories again only applicable for news doesn't matter for events, at least in this. Instance and then if you need a secondary CTA button to appear, that's when this is checked and then we would check to see if there's any information stored in the content fragment. So I know it's a lot, so we can take a look at an example of a content fragment card list that has already been set up with content fragments and such. So what I'm going to do is I'm just going to navigate to the live usage. So if you're ever looking for examples of components and like where they're being used across the site so you can see like how did somebody else set this up? The way that I do this and the way that you can find where this be used is by clicking on the top left Adobe Experience Manager, clicking on our little hammer and then clicking on components. So in this case I want the content fragment card list. So I see that that is here. Click on that and I'm clicking on live usage and this is not going to list every single page that it's being used in because that would likely slow down this site. However, this is going to give you a very good. Representation of pages that are using this. So let's take a look at this cafe page. I'm just choosing one at random. Once I click on that, it's going to navigate me to where this is and then I would select here on the content tree to see exactly where is that content fragment card list being referenced. So I can look at it and I see it right here. So in this case, with my event calendar section, there's no events found. However, if I wanted to find, say, another example of one that's using this, I could go back

to exactly where I was and just take a look, but we can see for Foxwoods Cafe. In this example, the way that they have set up, we have our event page based path. We have our CTA labeled more details which would be displayed if there are events. We have set the route path of where those events are all located and in this case all we have is a secondary CTA to be displayed when there are events. I want to find an example where there's actually events. I'm curious if anyone has any suggestions of a cafe and stage that would likely have any events. Let's try Valley. That's the an Asian one. Let's try this. Just take a look. Uh, perfect. OK, so here's an example where everything has been set up.

So let's take a look. Here's our CTA label of more details. So you can see this is what's populating this button here. So we have our news default image. In this case, it looks like. Each of these specific content fragments had an image that was stored within it. That's why this is not displaying. Actually, no, this is a news default image. My bad. So this this has no effect on this here. But then also you'll notice I do have my secondary CTA. Let's take a look at. While it's all being displayed, if there's no secondary CTA info stored with for this particular event, then that button's not going to display, but we can look at that within the content fragment section. That's Cafe Valley and and let's check out February 19th. OK, I think this one is it. Alright, OK, so here's our event image and you can see a secondary CTA link is indeed blank. That's why there is no button that actually appeared here. Um, let's see. And so yeah, the image there's an image event placeholder image that's being stored here and that's what's displaying. And if I were to click on the more details, this operates just the same on my bent details page which I had inputted or which was inputted in the configuration window had been set and then it just passes in the ID. And so the information all displays here just as expected. OK, so this is the content fragment list. The other places there you can see this in action today I believe would be on the Hard Rock website when it comes to news. That's also again another available model. Moving forward though, it seems like as as the team is coming up with additional content fragment models, it would make sense to enhance this component to be able to reference those models and then display it as a list. Moving forward, I'm going to pause here to see if there's questions about this content fragment cart list component.

Edwin Aquino 55:48 With this component, I've I've seen it before where if we only have two cards, it's not really centered, it's it'll show the two cards to the left. Is there any way to center those cards or have it like fit configured to where if it's just two cards, it'll show centered or one card?

Daniela Tea 55:53 Mhm. Currents. Right. I think that's something, right. I think that's something that we also were talking about when it came to the careers website and I think that was noted in Jira and that was identified as a gap. Definitely understand that you know as there if there's. One or two having that centered. So we understand what the ask

is

currently today that's not available, but that was something that was captured in JIRA and we would bring up again during our gap analysis.

Edwin Aquino 56:29 Perfect. Thank you.

Daniela Tea 56:30 Yeah. Any other questions about the CF card list component? Alright. OK. Yeah.

Edwin Aquino 56:45 Actually, one more, one more. What if there is no CTA for the event? Is there any kind of additional functionality that any settings that we have to check off or change if there's no CPA for just a specific event? Yeah.

Daniela Tea 56:55 If there's no CTA for the event, oh, I see. So to be clear though, the CTA that's here for these events is specifically to take you to that event details page. Are you saying that there might be an instance where this page doesn't exist?

Edwin Aquino 57:12 Correct. So a lot of times we would host events where there's not any additional information to share with the guest. It'll just be the the act, the time, the date, that's it. So there's no reason for the Learn More page. So we generally keep that CTA away because there's no reason to have a guest click on something that's not going to show them.

Daniela Tea 57:22 Hmm. OK. I see. Let's see how trying to see where the model is and if we actually have that as a required field. So I think, I think the way that the component has actually been set up is that the expectation was that all.

Edwin Aquino 57:32 Anymore.

Daniela Tea 57:52 Events would have additional details. I understand what you're saying that not all events would have, but that's when we were creating it that like whether it's the ability to say like share it or post, you know, like this has the social media portion, right? Or if there was some information that would be captured within this detail section, that's why the. Default is that all of them would have an event details page. So I think what you're saying though sounds like that would also be a gap where the desire would be to not have this displayed at all. So right now that functionality is not available, but that can certainly be identified as one of the gaps.

Edwin Aquino 58:33 Thank you.

Daniela Tea 58:34 Yeah, OK, all right. OK, so that is the content fragment card list component. I'm going to now go on over to the header and footer specific components since those are related to shared content. So we are actually within a footer right now for San Diego. I see this

is an open tab, so let's take a look at this one. Um. OK. And actually, yeah, that's right. I remember, I remember we talked about this when we were talking about, you know, experience fragments and experience fragments. Gonzalo, I believe you and the team had wanted when when you guys were putting in like the forms and such, correct me if I'm wrong, but you guys had updated. Experience fragments in order for for this form to appear. Is that correct? Yeah.

Gonzalo Calasich (SHRSS)** 59:27 Correct, correct. The goal was that we needed to have this form on every page and that is why I think the experience fragment was the right choice. And because what's on the bottom of the of the page would say like why don't we reuse the footer to make it happen and it it came out really nice.

Daniela Tea 59:33 Mhm. Yes. Uh huh. Yeah, so yeah, this is a absolute perfect example of experience fragments within experience fragments. So now if if Gonzalo, if you and the team, if you guys ever need to like change anything within here instead of changing it within the footer experience fragment, it would just be within this location. So glad to see. That we see in a live example in action. That's wonderful. All right. So moving on to some of the different portions of our footer. Again, I know we talked a little bit about this, but wanted to make sure that we covered some of the footer specific items, for example. When actually creating a footer itself, there is a specific footer template that needs to be used. So I'm I'm here at this root level. I'm not actually going to create it, but if I were to create experience fragment, typically when it comes to headers and any of those examples that we talked about like this. This one here when I was making up that fake benefit card, you would use the SHRSS blank variation. The reason why is because this is going to this is the specific experience fragment template that we created which has all the components that you guys are accustomed to seeing. However, when it comes to footers and. Only you want to use the footer variation. The reason for that is because the footer variation experience fragment template actually wraps the content with the footer markup, so that's going to be visible within the actual like markup code, so there's no real difference. Or change in what you would see when you're interacting with the experience fragment, but it is specifically so that way there's that footer markup available to you. Additionally, when it comes to the footer, there was, I believe when we were discussing how the footer should be set up, there was. An original requirement to essentially restrict some components from the footer. So that's why when you add something within a footer experience fragment using that template, you're not going to see the full list of items because that was requested to restrict what was shown. So in this case here you'll notice there's there's, you know, certainly less than the components that are available. However, if you are creating a regular experience fragment. This here and I'll make sure I delete it. So this is my regular

experience fragment using that SHRSS variation. This is where you'll see the full list of things because essentially this is this could be placed anywhere on the page and not not just like a footer. So I want to make sure the team understood why this you see a smaller list when you create footers and also what you would need to do if you wanted to create something that had additional components in it. It would just be a regular experience fragment. OK, so let's take a look then at some of these footer specific components. I believe the only one here that would be footer specific is the footer image list. This is something that is. Believe visible on our hotels, but not all of them. So can someone give me an example of a hotel that has like the footer images at the bottom? Does anyone have an example at the top of their head? It's like the, I guess, like the awards and such for a hotel.

Lyon, Rick (Director of Digital Experience)** 1:03:24 You can try Cancun. Can. Yeah, New York, Cancun or Madrid. Try one.

Edwin Aquino 1:03:25 New York. New York has one, I believe. New York has two.

Daniela Tea 1:03:28 New York. Let's take a look at. Yeah, cool. Let's let's take a look at New York then, of course.

Edwin Aquino 1:03:35 And how? OK.

Daniela Tea 1:03:39 OK, well actually yes. So this is here we go. Here is an example. In this case this only has looks like it only has two. We can take a look at the others, but for this specific one we can see here this is. All right. Um. And actually yes. So you can see here are required fields, images, alt text. However link is not and my understanding for that is because sometimes they don't actually link to like a an external URL and it's just simply to display the image. However with the image list as you can see multi field can add as many as you want. We'll take a look at. Another hotel where we can see how that's in practice, depending on how many images you do add. I believe the display of images. I think I can't remember if it's restricted to three. Or if it's two, I can't remember exactly. Let's take a look at another one. Then you guys said Cancun, Madrid, maybe, which would have a ton of awards.

Carlos Aldana 1:04:43 I think that the brand page highrock.com and the hotel it it has a bunch.

Daniela Tea 1:04:48 Uh. Which one? Sorry.

Carlos Aldana 1:04:50 The main page for the hotel.

Daniela Tea 1:04:51 Oh, OK, let's take a look at the main page then. Not header, footer.

Carlos Aldana 1:04:55 Yeah.

Daniela Tea 1:04:59 OK, let's take a look at this. All right, perfect. Yeah, great candidate. All right. OK, so for this one here, we can see that I'm going to view this as published. So I guess is there only five? Let's take a look. Let's find out. And this is in stage, guys. This is not, this is like not in. So if you guys were really expecting this to look different, this is all like stage content. So I have 12345, all right, Yep. So I don't think we had put a limit within for this particular component. So of course as Hard Rock continues to win more wars. And such. This could certainly grow with just like with all of our other multi fields, the ability to change the location or the I'm sorry, the position of where that image is. And we'll notice here this image Max height. So this here is as you're having some images I guess. It depends on if you guys are pre-formatting your images or resize them in advance and then uploading them to the DAM. But in this case here we were trying to put some sort of height restrictions I believe to the the carousel itself. So that's what that field is. We do have the image position tab just like we have everywhere else. As we've talked about, you can see in this instance it's not being used, but this particular component, I don't know if we're actually using it outside of the footer, but this is one of those specific components that we have allowed for use within the footer itself. So that's where you have it here, the footer image list. OK, let me see what else is here. So we footer, footer image list, social media. That's also something that is captured here within the footer, although this can certainly be used in other locations. In this case, I think we are aware of of how you know this component works since we had seen it before. The main thing though I think that can differ and and what you'd see be different across properties is the two column view or the inline view. Inline of course. This means it's just one line, and that would probably be something you would want to consider if there's like, say, an odd number of social media icons here. And so as you're reviewing the footer experience fragments for some properties, you might see a different style variation being selected. OK.

Edwin Aquino 1:07:33 And Daniella, for these, for those award images, 'cause I know we currently have them set up a specific way, is there any specific specs that you may recommend or anything that we can use for these images?

Daniela Tea 1:07:33 So those, yeah. Mhm. Mhm. Let me see if that's so that's as we're reviewing the component spec list. Let's see if that's on there. I know we had put a logo on here. Let me talk to the team about. Oh, here we go. Image list, awards, carousel, Flutter, 96 pixels. So I it looks like we have provided that, but again, we're reviewing. This page to confirm the information on here so you can see that's already here, but we'll confirm that for you.

Edwin Aquino 1:08:12 Perfect.

Daniela Tea 1:08:13 Yep. All right. OK, going back to our confluence page. Any questions though about the footer in in general that a lot of these components with the exception of the ones I called out, you're you're using it already across multiple pages on the site. Um, but anything you know about footer in general that that you guys have any questions on?

Edwin Aquino 1:08:40 Nope.

Daniela Tea 1:08:41 All right. OK, let's move on to the top where the header is our other main experience fragment that's been established. OK, I'm gonna go to actually, let's go to since we are reviewing careers. Let's take a look at careers and see how what's being set up there, OK? OK, so here is our careers header and we know that there are different parts to the header. We have the header in general, which is this whole entire component. So this is this encompasses the entire component which is made-up of our crowd navigation. Our crown CTA and also the main navigation. So clicking on the crown navigation as we can see here, in the case of the career site, we know there's only one label and that's why this has been, excuse me, that's why there's only one thing here. However, for say like the. Corporate page. I believe there's multiple labels that are being displayed, so this that's why this particular component is using a multi field. So if you need to ever change this and say link it to something else, this is where you would go crowd navigation. Crown CTA, which is this ortion here on the right. We have our different labels, returning applicant login, team member login and then the search for jobs button. And you'll notice here the different experience selectors CTA with the color of this. You also see CTA with color of this. And then this here is a CTA, but no color has been selected because by default CTAS will display with this background. So what I'm trying to highlight here is that the experience selector is all the same a CTA. However, if you need to change the appearance, you do have some flexibility with that by using this color selector field. OK, each of these within the Crown CTA we have the different link types, so you have a link. So of course a link would link to whatever is located here, but you also have modals, modal small, so depending on what size you want the modal to be. These would be selected and then what would be put within the URL field would be the specific experience fragment that you say would want to display in the modal. So in this case here. And careers, we don't have that. I will look for an example where we do have that since I don't want to mess this up, but just showing that links are typically I believe what you guys are using across most of your sites. However, when it comes to like hotels, I think that would be the book your experience model. So we can take a look at like a hotel navigation to see how. Modals being used with our experience selector. CTAs, as we all see, are

basically going to be buttons or links that take you to a location, but you also have the sign in functionality. The sign in is actually what calls the modal for Unity. As we know on the hardrock.com website, this particular button displays this iframe of Unity within here that was set up by actually clicking on the sign in. Experience selector. You also have your drop down which can be displayed as a CTA, a map marker or a language selector. So these are the different icons that would display and then you would be able to add list items underneath that. Cycle. The map marker and then I can create a list that would appear after I clicked on that map marker, I click on the language selector icon and then I would put the different languages that I want along with the URLs, etc etc. So these are being used across I believe some of the other sites, not this particular one, but just wanted to make sure the team was aware. Like when these would be used and how to access that. Then we also have help which displays a help button and then the help button would link to whatever is here and then finally an author unique ID. Which in this case we don't have that, but this would be a way to be able to assign an ID that would then be added to the markup for this. OK, so let's take a look at. Actually, I want to. I want to show one that has a modal. I want to show one that has a modal. So let's go to hotel. I would assume this one has one. OK, this has a lot. All right, it's perfect. Alright, so as we saw exactly what I mentioned Unity. In order to display the Unity modal, I'm sorry, iframe sign in is selected. Learn more about our best rate guarantee. We've used the image. Oh yeah, there's an image field here which you can see is clearly being used. This best rate guarantee image. We're saying it's a CTA so that way when you click on it, it takes you to this page. Our book now button also a CTA. It has the modal. You'll see the modal is pointing to the book now experience fragment. Unity loyalty program. This looks like it's just a link to the Unity website, so that's why CTA was selected. And yeah, so this essentially is this is showing the majority of the items, you know, like a combination of the different items that we just reviewed. And we can actually take a look also at this ground navigation. Just to show, I think there was a small change that we have made where the pipe no longer shows that there's only one items that's now being reflected in the careers websites. There's only one link, but of course if there's additional items to the right of that, the pipe will appear and then anything underneath the first item. We'll just display to the right of the pipe, right? Hey. All right, and finally for the header, main navigation is a big one. This is essentially where you would put your everything that's in this section, including the drop down menus that will appear under each individual links. Of course on this logo tab, this is where you set your logo and also what link you would point to. We know that location address and reverb is reverb. This is something that we would see for the reverb headers, so it's just using the same component but with with this checkbox essentially in place. So it's styled that specific way. For the main navigation, this is where we are putting all of

our links

here along with secondary navigation, also tertiary navigation. I'm trying to remember which sites use that, but essentially as I hover over destinations. This is where I'll see anything that's here in this portion, and if I need to go a little bit deeper, I can. However, I believe in most cases I think we're only using secondary navigation for most navigations. So yes, a lot of multi fields in place in here since. There's a lot of links that need to go in the navigation, but essentially you know this is I think where you would likely have to spend the most time to update links when you're adding new pages or removing pages, and also if you need to prioritize ordering. Of these different pages, finally the mobile slash tab. What this is showing here is I believe when you're actually just in like a smaller break point, there's going to be a. Let's actually take a look. So if I were to expand this. You can see that text. So if you want to put say like back or back to main NAV or whatever, that's where that text is appearing for that specific field. Alright, OK. Any questions about the header in general? Because I know that you know this is the headers already header and footer are both already being used on say the reverb site, the corporate site. Not sure if the team has had to update anything as of yet, but just wondering if there's. Any questions about the authoring portion of that? It. OK. OK, so let's see here. OK, so tabs.

Lucas Nelson 1:17:52 Did you did you cover everything, Daniella?

Daniela Tea 1:17:54 I think I did. I didn't put. So we talked about content fragment models. That's not something that was listed here. It was more like general, but we did go over content fragment card list as well. Frage fragment, yeah. So these are all the items that are essentially within.

Lucas Nelson 1:17:58 OK.

Daniela Tea 1:18:14 Your header or footer. So I yeah, so I covered what I wanted to. So turning it over to the team, anything in particular that you guys had questions about. Carlos, I see your hand. Go ahead please.

Carlos Aldana 1:18:29 Yeah, Daniela, I have a question related to the content fragment events. Is it possible to copy one event, one content fragment in order to create a a new event?

Daniela Tea 1:18:35 Sure. Is it possible to create? Sorry, let me I'm gonna. I'm gonna just navigate to our. OK, you're asking if I'm just gonna oops, didn't mean to click on that. I'm just gonna change the view here back to column view. You're asking if you can copy an event content fragment, is that correct?

Carlos Aldana 1:19:04 Yes, because what I understand is that we are going to create the events, let's say for our content calendar events. And then if if I have a similar or the same artist presenting the same show but in a different date, can I copy and paste that?

Daniela Tea 1:19:08 So. Mhm.

Carlos Aldana 1:19:24 Enter.

Daniela Tea 1:19:24 Yeah, so you should be able to copy and paste and you'll notice that now there's two versions. If you look at the name, wait, but one second. OK, sorry, I zoomed in. If you look at the name, you'll see that the name says day one, right? Whereas the original version does not have.

Carlos Aldana 1:19:36 Ha. Yeah.

Daniela Tea 1:19:44 So this is indicating that this is a copy and then if I were to open this up, so I'm going to click on this and I'm going to click on edit. It's going to have the exact same information and then obviously you know like say this is a new date then you would want to change whatever you know you want to change.

Carlos Aldana 1:19:59 Mm-hmm.

Daniela Tea 1:20:02 And I would recommend though, you know, like for ease of use, you can also don't forget you can also rename your content fragments, right? So hang on, sorry, this isn't the way. Yeah, so you can rename your content fragments by selecting it, clicking on move and then.

Carlos Aldana 1:20:10 Yeah.

Daniela Tea 1:20:21 Changing the title to whatever you need. You can also actually change, you know, like we saw the one because that's a copy. You can also change that too. You just need to make sure that this is, you know, not the same as like a different content fragment, right? Or else that's that's not going to, it's not going to work. But yes, you can certainly copy things as like a starting point.

Carlos Aldana 1:20:35 Yeah.

Daniela Tea 1:20:41 or whatever and then changing the relevant information and also even changing the title after you copy it.

Carlos Aldana 1:20:47 OK, awesome. Thanks.

Daniela Tea 1:20:48 Mm-hmm. Any other questions?

Edwin Aquino 1:20:53 I got a few questions here Daniela for the for the main navigation is is there any? Can you explain like what the is reverb does exactly again?

Daniela Tea 1:20:56 Sure. Yes. Yeah, absolutely. Let's navigate to our experience fragments and I'm actually going to open up reverb one. I think Atlanta might be a good should have it. Alright, so. This has OK, so first to this field location address you can see how that translates to reverb right? And with is reverb the navigation for

reverb is slightly different right? So like our navigation and keep in mind this is the experience fragment so if. We actually view the site. I'm gonna pull the site over as well from stage. So you can see how it actually looks. No, not that. I'm at Atlanta, I think. Yeah, I'm at Atlanta. OK. OK. All right, OK, so just to be clear, you may be like, wait, why is it styled this way? This doesn't look the same. So the experience like the theme has not been applied to the experience fragment because if you guys recall, you set the theme at the level in sites. So that's why some things might look a little bit different, but as you can see, like the font is pulling in what's correct for the reverb theme, etcetera, etcetera. So don't be alarmed when it doesn't look the same, it's because the theme is applied at the site page level. All right, so the is reverb, essentially what it's saying like the navigation for reverb is obviously different from the navigations from like the Hard Rock website, et cetera, right? So like this is just saying when I have is reverb checked everything that I'm putting. You know, like in the main navigation and such is going to be structured this way and like you know, like appear like as in the hamburger versus like across the website, etcetera, etcetera, right. So that's why is reverb was specifically made because while the reverb navigation, you know it's it's a navigation just like every other site, there are some different. Differences between reverb and like corporate or reverb and hotels, etcetera. None of those need it because their navigation is pretty pretty much the same and how the component you know like is technically built, but reverb just had to be an exception. That's the only reason why this checkbox is here specifically for the reverb sites. So you're not going to use this outside of anything that's not reverb.

Edwin Aquino 1:23:36 OK, cool. And then you just mentioned something about how the child, the child pages inherit the the main theme for the site. Is there any way you can change it to where we can have the child page have a different hero, I mean, excuse me, main navigation or footer?

Daniela Tea 1:23:44 Yes, yes. Let me confirm what. Yeah, let's confirm what you're saying. So let's take an example of like, say, actually the Hard Rock website, right? OK, let's see. Is it set at this level? One second. OK, so at the Hard Rock.

Edwin Aquino 1:23:54 Or is that just basically manage? Yeah, how how would you manage the? Mhm.

Daniela Tea 1:24:10 Level. I'm sorry, the Hard Rock EN meaning the language, the English language website, the home for that. I have my theme set Hard Rock and then also have my header experience fragment and my footer experience fragment. So what this means right now is that anything underneath here, all of these are going to have that same experience fragment you're asking for like. Say our history to have something different. Is that correct? Like a page like this?

Edwin Aquino 1:24:34 Oh yeah, or just the just for the header or footers to be different on a child page versus the actual prior page itself. So let's say you'll have a subpage cafe that'll have a different header or just an as an example.

Daniela Tea 1:24:44 Hmm. So. So right now, so based off the structure of this, because this child page is underneath this home page where the theme and the navigations are set, it is going to inherit. This is using the open page template, yeah. What it sounds like you're asking is instead of it inheriting, what might make sense for like the future is to have a slightly different template which doesn't necessarily inherit the information that was put in the properties of this page. And so that template could be built to say, you know, have an experience fragment built directly into that page templates. That way the user would then select which header and footer to use. So right now, because you're using, we're using page templates for all of our child pages, you don't have to. What I'm saying is. The thing is you could theoretically create a new page template to essentially have the requirements that you just described to me. We just don't have that right now.

Edwin Aquino 1:25:53 OK, OK.

Daniela Tea 1:25:53 Yeah. So it sounds like what you're describing would be a could be a new template in order to be able to to kind of break that inheritance, but still live amongst the same level as the other topic. Does that sound right?

Edwin Aquino 1:26:05 Yeah, that sounds about right.

Daniela Tea 1:26:06 OK. OK. Yeah, that's what my recommendation would be for that then. And I think we are going to be going over page templates. So maybe what I can show kind of similarly to what I was doing for that bio biography contact factor model I was just demonstrating earlier. I can perhaps demonstrate like you know like a template and like some of the decisions you would be making when creating a template and how that could potentially be built out.

Edwin Aquino 1:26:38 OK.

Daniela Tea 1:26:38 Right. OK. Um. All right, so let's take a look now at. So we've covered this, so some other items we're talking about future sessions I did have on the radar since I wanted to make sure we covered as many of the content fragment model related components possible. I did have on the radar news. I believe the team is probably already used to news, but can certainly cover you know different the different components again as well as the the specific templates. I also had locations which I think we were going to try to cover sometime next week. This is for the location content fragment, menu content fragments. Since those are currently existing in the system, we're going to go over how

these specific content fragment models relate to some of these components and then also some components you guys are familiar with with the hotel websites. Like booking widget offers destination search and filters. And then also I think we've seen the Google map, the location list used on certain other parts of the the corporate site as well as potentially using the Google map on the careers website. So this is something these are the some of the topics that we'll be covering in some future sessions tomorrow and I think hopefully early next week. And then I think after that we'll move on to things such as like page templates and then also take a look at the other components that are not necessarily content fragment model related. But certainly want to make sure that they are covered. So yeah, this is what I had for today. I do see the time. I think Luke, anything else that you want to add?

Lucas Nelson 1:28:35 No, I don't think so. Thanks for flashing those future topics, Daniella. I think that was helpful as well. I don't have anything else to add. Andy Lambert, I don't know if you're active. Is there any, you know, updates technically that you have?

Andy Lambert 1:28:51 No, I think I'm good.

Lucas Nelson 1:28:54 OK. Yeah, Danielle and I think we're good from our side.

Daniela Tea 1:28:56 OK, sounds good. Then I'm gonna flash the KT calendar again though, just so the team is aware the location of it and what we have planned. So typically we don't necessarily want sessions on Friday, but we are making exceptions since we weren't able to have it last week. But you'll notice here we are scheduled to begin our technical knowledge transfer sessions, not next week, but the week after. So we'll be getting more into and this will be particularly relevant to you, Gonzalo, if you're still on us, we'll be getting into more of those technical topics starting the week after next.

Lucas Nelson 1:29:34 Yeah, and that's a good, that's a good call out, Daniella, Scott, because those are morning times and the morning can be tough for both of us. I'll work with you asynchronous. Maybe we can get the placeholders on for technical enablement in the adoption sessions so we can get them on the calendar sooner.

Daniela Tea 1:29:34 Right.

Scott Sorel 1:29:53 I would say send it out sooner instead of later, Luke. Exactly. Yeah, yeah.

Lucas Nelson 1:29:54 Rather than later. Yeah. So I'll ping you what my thoughts are for those morning calls and then we'll go from there. Yeah.

Scott Sorel 1:30:02 Yeah, yeah. I think people will make room for to be there. If Gonzalo is here, I mean, you can ask him where we finish early. You know, he's here. Yeah. So like the early ones, Gonzalo, the week of March 9th, would that be a problem?

Lucas Nelson 1:30:03 OK, sounds good.

Gonzalo Calasich (SHRSS)** 1:30:11 I'm here.

Scott Sorel 1:30:18 If we did like 9 to 11.

Gonzalo Calasich (SHRSS)** 1:30:21 No, that's fine.

Lucas Nelson 1:30:23 OK, yeah.

Scott Sorel 1:30:24 OK, there we go. Team player. Told ya.

Gonzalo Calasich (SHRSS)** 1:30:26 Yeah.

Lucas Nelson 1:30:26 Yeah. So Andy and Vinay will be like co-leading those. That's the reason we're doing them in the morning. So Vinay can participate. OK, yeah, sounds good. So I'll work to get those on the calendar, Gonzalo, and you guys can see those and you'll know it's kind of a blitz week, the March 9th week. OK. So thank you for that.

Scott Sorel 1:30:46 Yeah.

Gonzalo Calasich (SHRSS)** 1:30:47 Thank you.

Lucas Nelson 1:30:48 Yep. Alright, cool. Yeah. Danielle, thanks for doing that. Yep, I I have the next action for that stuff. Thanks.

Daniela Tea 1:30:50 Alright. Thank you very much. OK.

Scott Sorel 1:30:53 Cool. Beautiful.

Edwin Aquino 1:30:54 And Danielle, for for next week's session, for next next session we have, would you be able to provide us some examples of possibly a footer with a search query and a footer that uses the tag as a component as the options?

Lucas Nelson 1:30:54 Alright, thanks.

Daniela Tea 1:30:55 Yes. Sure. We're talking about for the footer like what? Like, oh, are you talking about like for the list of links?

Edwin Aquino 1:31:09 'Cause I I think. Like in the list component settings when we have, yeah. Is there any way we can maybe explore that? I'm not too sure if you have one off hand already.

Daniela Tea 1:31:20 Sure, yeah. So let me confirm. We say footer with list that shows tag query and then also what was the other one?

Edwin Aquino 1:31:29 One was the search query and one was for tag.

Daniela Tea 1:31:32 Search query and text. Got it. Awesome. Yeah, no, I'll take note of that and try to either find examples or create some new ones, certainly.

Edwin Aquino 1:31:40 All right, thank you.

Daniela Tea 1:31:41 Alright, awesome. Thank you guys very much. Hope you guys have a good rest of your day then. Thank you everyone. Goodbye.

Lucas Nelson 1:31:46 Thank you, Daniella.

Edwin Aquino 1:31:46 Thanks. Thank you.

Lucas Nelson 1:31:49 Thanks.

Scott Sorel** stopped transcription

Session: News — 2026-02-20

SHRSS Adobe Knowledge Transfer-20260220_130127-Meeting Recording

February 20, 2026, 6:01PM

1h 19m 41s

Lucas Nelson started transcription

Lucas Nelson 0:08 All right, Daniella, I think we're we're off and running on the recording. If you want to start by just sharing the agenda for today's call, we can get started.

Daniela Tea 0:15 Yeah, sure thing. OK. All right. Good afternoon, everybody. Let's see here. OK. So for today, since we are continuing to cover anything that has a content fragment, I was moving on to the news content fragments. Related components. What I'm hoping to do today is actually show you guys how you would go about creating a brand new news homepage. So this is going to be relevant for say like for example if you guys had career specific news that you wanted, you want to add a careers news page specifically to the career site. We've seen how that works in the corporate website, but how do we start that from scratch? So going to walk you guys through that and I also want to spend a little bit of time at the very beginning though to address some of the questions that came up yesterday. Starting with I think Edwin, you had asked a couple of questions, especially at the very end with regards to showing a list that pulled in tags and also a list that pulled in based off of the search in query. So I wanted to go over that really quickly first. OK, so if I'm not mistaken, you had asked specifically for the footer, but I did want to confirm we are talking about the list component. In

this case here the list component is in the footer, but of course the list component can be used outside of the footer and so just wanted to confirm that is like that's what you were.

Edwin Aquino 1:49 Correct.

Daniela Tea 1:49 You're asking about the list component in general, is that right?

Edwin Aquino 1:51 Yeah, that's correct.

Daniela Tea 1:53 OK, sure. OK, so this is my little fake footer that I have in my training folder. So I made a copy of the an existing footer. What I'm doing here is in my list component I have shown an option for tags. So I created two training tags, one called events and one called calendars and you can see here that I have selected the parent page of this location and I'm saying OK anything that has this these two tags applied to it underneath this location I want you to just. Display it within my list. So I've selected match all tags and so right now you'll see I have one page that's showing up and we can take a look at that page and see what's actually applied to it and why it's coming up. If I were to change this to any tag, now it's saying OK underneath this section here, find anything that either has this. Events tag that I added or this calendar tag. So I'm going to click done and so now you can see I have 3 pages so they either have one or the other tag. So let's take a look at where I created the tags as a refresher for the team. I'm going to click on Adobe Experience Manager and then the little hammer and then tagging. I created a new namespace for training just so that way it's not something that you guys would you would because you guys won't be using these are just for training purposes. So I created a new namespace for training and then I created these two tags. One called Events and one called Calendar. So now that those are available here in tags, when I go back to the sites section where all the pages are located, I'm just going to navigate to my training pages. Under corporate and then under careers in English. So these of course are the pages that we've kind of been going over. I'm going to open up, I think it was calendar test and I'm just going to click on properties and you'll notice here under tags in the basic tab, I had added those two tags. One for events and one for calendar. I can, you know, add whatever I want and I can also add multiple at a time to this page in this case. So I've just selected these two. So that's why when you. Where's my page? Oh, here it is. When I selected this tag and this tag and I said match both tags, that's why only this page calendar test is what we're expecting to see will show up in this list. However, if I have selected any tag. That page will also still of course show up because it has one or the other tag, but then these additional pages showing up because it has either the event tag or has the calendar tag that I created applied to

it. So any questions about the tagging, how tagging works with the list component?

Edwin Aquino 4:56 Yeah, so when it comes to tags, we occasionally have some pages or events or any, you know, content in general sometimes has tags where we want to exclude them from a list. Is there any any option that we can maybe exclude certain tags from this list from appearing?

Daniela Tea 4:57 Mhm. Hmm, so let's see. So let's take this for example. Pretend that it has another tag like I don't know, like something silly like do not use right? But it still has events in calendar. So what you're saying is I want to show anything with events in calendar but nothing with do not use. Is that an accurate like?

Edwin Aquino 5:31 Correct, correct.

Daniela Tea 5:31 Um, useless. OK, OK, um, so hmm. I don't think out-of-the-box it works that way. What this is doing is is like I just showed it's building it based off the tags. It's not. It's not excluding, it's more matching. Let's see. I'm trying to think of a. Can you give an example of um like like like what's a real example like of A tag that might be something you want to exclude but it would still have the other tags?

Edwin Aquino 6:05 So for an example, we would have a promotion pages set up where one promotion page is specifically excluded from appearing on the landing page just because it's something that maybe the property uses off off site, so they don't want general public to be able to view it. So they won't show it on the website, but it'll still be up here in the back end. Um, but it'll still be elicited as a promotion. So like, that's one of the things, yeah.

Daniela Tea 6:31 So is it to confirm, is it a pub? Would it be a published page and and something that would be indexed or is it OK, so it's it's published, but just not something you necessarily want to feature on the home page, but it would still have these appropriate text to it. OK, let me take that use case back.

Edwin Aquino 6:39 Correct. Correct.

Daniela Tea 6:51 To the team right now, the way that this works as we just showed is based off of matching the tags. But I I understand though what you're trying to look for with regards to excluding. So I'll I'll see what we can, what we can do if that's something that's possible currently with this. All right, yeah, OK, so let's now go to search. OK, so with search, what search query is doing is you are putting any text here and it's actually going to match or look within.

Edwin Aquino 7:09 Awesome. Thank you, you know.

Daniela Tea 7:25 The title, the description, the page properties, but it's also going to be looking on things that are actually on the page itself that might match this query. So in this case here I'm saying OK, search it in this specific folder, anything that has KT in it. And I hit done and so you'll see OK, it makes sense that these KT ones are appearing. However, why is KT appearing on calendar, calendar, test and test page if we were to take a look at these pages and we can do so right now. The reason why is because somewhere on this page there is something referencing KT on it because the query is looking for any sort of text or any anything like a component or something that's referencing the phrase KT. So that's why and if if you guys want to see actually. I realized it's because this folder path is pointing to my KT folder path. That's the reason and it's also pointing the KT event this particular page. That's the reason why this page is actually appearing here. The search query is specifically looking again for properties and anything on the actual page itself that is referencing this. Specific term. So if you need something that's again a little bit more specific, tags is a good way to be able to make sure it's only things that you have tagged. Of course, we're going to look into that other use case Edwin you mentioned if you need only say like very, very, very specific things to show like a list of five. You have that option of course for your fixed list and then for child pages. This of course is you would select which page at what level. In this case I'm going to show at my. English level is going to show a list of everything and it's going to of course list every single page here, and it's not going to list the child pages because I only said only take the first level. So there are a couple of options where of course you know you're able to show whether it's all the child pages in the location. A very, very specific list of pages that you want to show anything that might match a certain term, but keeping in mind it could pull in things that you might not intend if that particular text is on on the page itself, and then tags in order to pull in anything that was tagged at the page property level.

Edwin Aquino 9:51 No, Daniela, with the listing function, is there anything that dictates how many elements up here before it splits into two columns? Or is this is it just?

Daniela Tea 9:54 Mhm. Um, so let's. So yeah, so we have a number of columns for list items. In this case we have two. Your question is if you were to have like say like 6 or something, how would it display? Is that what you're trying to?

Edwin Aquino 10:02 How was? How was that? Yeah. Yeah, how is it? How are you dictating whether you know what items are appearing in what columns? Is it just a?

Daniela Tea 10:21 Oh, I see. OK, so this is actually going to be going. So you'll you'll see this list calendar, test KT calendar, KT career. So this is in alphabetical order. I am able to order it by the last modified date. So it's looking at the title of the page. I have selected order by. Title or I could do by last modified date depending what your use case is. So based off the column, if I were to do this as three columns, this might look a little wonky. Yeah, you can see it's still it's still in alphabetical order based off of the title, right? So 123 and then the next one would be underneath here in alphabetical order. Does that make sense? Yeah, based off the columns.

Edwin Aquino 11:02 OK, got it. And then one final question, since we're on the footer still, there's one thing regarding the image icon right there that we saw it. There's an option for logo styling. Could you explain what that is? If, if, what's the use case scenario for that?

Daniela Tea 11:06 Mhm. Oh, let's see. Oh, my bad. The oh for this right here. Yeah, so logo image. If I'm not mistaken and I will check the ticket for this one. I believe logo image was supposed to apply a specific.

Edwin Aquino 11:17 Uh, not for the social, not for the social media, but for the the logo. Excuse me. Yeah, it.

Daniela Tea 11:35 Is there a specific height or specific padding? Let me see if I can find that. Um, let's see here. And I think let's take a look though at when I'm pulling that up in, let's take a look at what we have in corporate. I I can't remember if that's actually set or not. Mm. Yeah. OK. So it's not set. I I think that this is something that's actually not necessarily set for the footer. I think it's set on the pages where you guys are displaying multiple logos. What is it? Maybe the, is it the Heels Foundation page perhaps? Let me see if I can find that, but I believe that's supposed to make it like a certain height and width. So that way if you have multiple logos on a page it it displays in a certain way but showing a logos. I think it's the heels foundation page. Oh, maybe not. Hmm. Hmm, let's see. I think I need to look into that one. I need to check the JIRA ticket to see exactly what that does, but that's not something. Just to be clear, it's not something that's specific to the footer, it's for the image component in general. I will provide additional information as to when you would want to use that. That and the reasoning for it, OK.

Edwin Aquino 13:17 Thank you, Danielle.

Daniela Tea 13:19 Yeah, sure. All right. OK. So this is the list. Let me get out of some of these live pages. I don't want to touch anything in the corporate. Go back to my training and let's see. I think you will. There was another question, Edwin, that you had that I wanted to show really quickly. Just about the transparent backgrounds for what was it? The content fragment card list and I just wanted to show the content fragment card

list is actually inheriting all the actually no, I have something for this already. It's inheriting all of the styles from the cards itself, so it's so it's not something that's unique to the content fragment card list. Just to be clear, it's um. It's one of the styles that's on the cards and the purpose for it. Uh, here we go. OK, so if you have and excuse the crazy colors, but I was trying to show it. If you have say a default card, I'm sorry if you do not have like a specific card style. So like with tertiary, like you can see that the background can be set to transparent. If I uncheck transparent background, you'll see that it's white. If I set this to default and let's say transparent red. So it's not it's not with default, it's with I believe primary button so you can see a transparent background affect that. Hopefully you can see that. Sorry. Yeah, hopefully you can see that. And then also with the tertiary tertiary style, if you need to have it be transparent for whatever reason, you have that ability to do so. So I think what if you were looking at a list, it might have had certain things. It might have had say like the default overlay horizontal. To apply and transparent background is like it doesn't do anything. So transparent background is specifically for like the primary button and the tertiary link styling that's here. If you need to have say like a different background color coming in and say you don't want that default white, that's what the purpose is for. Yep. All right. OK. So I also know I saw the the list of questions for the shared data page. I had only taken a look at a couple, so we'll continue to review that and if there's a.

Edwin Aquino 15:24 OK, got it. Thank you.

Daniela Tea 15:40 Anything else we can show for that? I can certainly do that. But oh, sorry, Edwin, there's one more thing I know that you asked. It was about the redirect made URL. I did want to provide some documentation on this that you'll be able to see so. The difference between a redirect vanity URL and just adding the vanity URL entry is that the redirect vanity URL will cause the vanity URL to behave as a 302 redirect. So this is something that like I I guess it's dependent on what you're trying to do with the page like is this? You know, like a permanent redirect you're trying to do or is this like a short-term redirect you're trying to do? So there there is information on here. However, I realize this might be a more like technical topic. So I don't know if Andy's on the call, but I believe our plan is to talk more about the dispatcher and like redirect. Management and such in our technical enablement, but I did want to provide, yeah, thank you, Andy. Yeah. So I did want to provide you some information, Evan, from the direct documentation exactly what it does. However, we can certainly get more into like redirects and such during the technical enablement sessions.

Andy Lambert 16:38 Yep.

Edwin Aquino 16:53 Perfect.

Daniela Tea 16:54 Yeah. And I can, I can pass along this link to you in the chat. OK. All right. OK, then. So now let's jump back over to our agenda for today, which is news. So as mentioned earlier, we're going to go through all the different news templates, the news content fragments. And the various news components. And just to confirm, the authoring team right now is currently adding news to the corporate site, is that correct?

Edwin Aquino 17:25 That is correct, yes.

Daniela Tea 17:26 OK, perfect. So in terms of like setting up any new news articles within the dam, I I just wanted to confirm like the team, you know, like like I don't think I saw anything for. So I didn't see a 2026 folder here, so I wasn't sure if there was. Like anything new that had been added or like exactly how the team was going to be handling news for the new year. So this isn't staged though. I didn't want to go and prod mess anything around, but just wondering, you know, like if the team has been adding anything new for the year 2026?

Edwin Aquino 18:05 That is a good question. Carlos, would you be able to answer? Yeah.

Carlos Aldana 18:06 Yes, I think, sorry, I think that we added probably one, but we are that is on prod.

Daniela Tea 18:15 Yes, that's on prod. Yeah, don't worry, this is stage. I just because I couldn't, I didn't want to go into prod to look around and actually do something. So I just wanted to. OK, perfect. So yeah, so you know as the team has been practically doing it that we can we know what the set structure is for news.

Carlos Aldana 18:16 Yeah. Yeah.

Daniela Tea 18:32 At least for corporate, I believe in pride you would see the similar structure except for my KT folder which I only made on stage. So we set up that same sort of structure also for the hotels based off of the property name, course and language and then the year and then the month and then the actual content. And so not certain if you guys are planning on changing that structure, but this is again of course a way to organize your content to make sure you're editing exactly what you want for the property that you want. In my case here for my KT folder, you know I was also following a very similar structure. I have my February item right here. So First things first, when we are creating new news articles for say a new line of business like careers or something, what you would need to do is in the dam, which we are here under CF and under news, you just want to create your. Folder for your line of business and then just set up something very

similar to what I have here and then you can start creating your content fragments under the specific month that you have. So I'm going to go ahead and click create and click on content fragment. So as the team is familiar with, when I do that, I see the different types of models available to me. We're going to select Muse, click next and put my title, and I'm just going to hit create. All right, so here's my news content fragment model. You can see the highlighted fields or anything that's required. There are certain things that are not required but could still be useful. And as we had mentioned yesterday when we were talking about content fragment models, I did. I want to call out of course in the future as you guys are perhaps identifying say other fields that you might want to add here or maybe you're going to use some of the things that are previously not required is required. That can certainly be done. Once you guys make that decision, you can certainly. Certainly update the content fragment model. One thing to keep in mind though is of course if you are say making like the author field required suddenly and then there's content fragments that do not have that value, that's the kinds of considerations you need to make. So certainly a new field making a required that's not. Don't necessarily cause issues, but definitely want to plan and make sure that before you create a content fragment model and before you edit one that you have a clear understanding of of what field you want. Some other things that you can do as we saw yesterday is say for your author, say you know that right now it's a text field. And it's not required. However, say in the future you have a Bank of authors that you might want to, you know, set as your own content fragments with like their bio or something. This could potentially be updated to say a content reference field to then be able to select an author and all their information. Versus typing in the same name over and over again. So just trying to give you guys some ideas of like what can you do to essentially create additional models, like what are some considerations to take and how to make it, you know, more like shared content, which is what we were discussing yesterday. Carlos, I see. No, go ahead.

Carlos Aldana 22:05 Yeah, I I see that the image field there. So can can this content fragment include the default image?

Daniela Tea 22:08 Mhm. And the content fragment create a default image. OK, so yeah, as we saw yesterday, so I don't think a default image was set. However, let's see here. So that can certainly this is what I mean. Like this is certainly something that that can.

Carlos Aldana 22:19 Just. Yeah.

Daniela Tea 22:33 Be added in the future. Right now it's it's it's not a required field, but what you're saying, Carlos, is that the expectations that all articles would have an image. Is that accurate?

Carlos Aldana 22:44 Yeah basically because when when you publish A blog article then there is the this feature that display that the new one on the website on the landing page on the main page of the site. So it requires to have an image if if we if we publish A blog without without image then.

Daniela Tea 22:49 Mhm. Uh. So are you talking? Yeah.

Carlos Aldana 23:03 And we have to do, we have to add something.

Daniela Tea 23:06 Just so Carlos, just to confirm, are you talking about this? Let's take a look at the Hard Rock website and I just want to confirm which section you guys are talking about. So I'm here on the news page, the blog page. Are you talking about like these images here?

Carlos Aldana 23:19 Yeah, that one. Yes.

Daniela Tea 23:25 OK, so just to be clear that so this here, this here is a new search result component and I'm going to jump back over to my page. That's this this component. You can set a default image at this level.

Carlos Aldana 23:38 Yeah.

Daniela Tea 23:42 And so that would appear for any content fragment based off of what I've what I've like configured here. Any content fragment that doesn't have an image will automatically display this image within this view. Is is that so is this what you're this is what you're referring to correct cause like.

Carlos Aldana 23:57 Oh, OK. Yeah, that that would be a solution, yes.

Daniela Tea 24:01 OK, OK, cool. Because yeah, we can take a look. This is the test article I had made earlier. So we can take a look at that test article. Let me pull this up here. So my test article, I believe, was my was my training article. I think it was this one. Oh, Nope, sorry, it was my. News article so that so you'll notice my title is is slightly different from what my title of my actual article is. But yes, so this is the test article and you'll notice here I left the image and the image alt text blank, but I set the image at that component level so that way something would. Appear here in the new search results. So hopefully Carlos, that answers your question on how to have like a default image for anything that doesn't. If you don't fill it out, as long as this is set with something, then that would display within this page.

Carlos Aldana 24:53 Yeah. OK. Thank you.

Daniela Tea 24:55 Yeah, sure. OK.

Edwin Aquino 24:57 So Danielle, with the with the images, just to expand on Carlos, sometimes we have it to where we have default images on categories. So let's say we have A tag and the tag is, you know, it'll say casino, it'll show an image, a default image of the casino, unless if we override that with something else or if we have.

Daniela Tea 24:59 Yes. Mhm. Yes. I see.

Edwin Aquino 25:17 Have the A tag that says hotel will change the image just so that The Newsroom is a little bit fresh. It's not constantly the same stale image over and over again. Um, is there kind of any kind of functionality we have here that can imitate that?

Daniela Tea 25:23 Mhm. Mhm. I don't think we have the default image set based off a category like based off a tag. I do have a question though. So like is there ever any use case where like for example say you had tagged Hard Rock News and you had tagged like gaming? Are you saying that perhaps like there would be a default image for gaming and a default image for Hard Rock News?

Edwin Aquino 25:44 Mm-hmm.

Daniela Tea 25:50 Is.

Edwin Aquino 25:51 There would be and in this situation where you would have multiple tags, it would pull that first tag's default image rather than the second one.

Daniela Tea 25:55 Uh. OK. So it always based off of the oh, oh, based off what you selected or based off the outcome order. OK, OK, so like.

Edwin Aquino 26:03 Correct. Or we would override it to whatever we wanted if if there was a unique image that we can use for that article.

Daniela Tea 26:11 OK, so yeah, so right now the default image is based off of what what's set in here. So clearly you can see it's not based off of categories. I do understand what you're saying, but I think that this would one, this is a gap, but I think we would also want to discuss like the requirement that you're. Saying because like I can certainly see like you know if you have plenty of categories selected, now the author has to make a choice as to which specific default image should be prioritized to show for here. So that's gonna, you know that that to me is like, OK, yeah, want to dig deeper into that.

Carlos Aldana 26:45 Mm.

Daniela Tea 26:50 So want to make sure that we capture that as a gap and then also want to make sure that you know there seems to be some sort of requirements and logic that are that would be required for us to like jot down for that one since yeah, the multiple of these articles probably would have

multiple default images selected. So want to understand how we would want to make that work. Work. So no right now, but could be in the future, yes.

Edwin Aquino 27:10 Got it. Yeah, got it.

Daniela Tea 27:15 All right. OK, so let's go back to my news article that I did not fill out, and let's go aptly to this category section here. So I'm clicking on my little field. You can see it's showing a list of. Tags here. And so to be clear, this specific field, if we were to look back in that tagging section, all of these tags are tags that are listed as news categories, so. Let's see how this was mapped, going back to tagging and I'm clicking on some of Hard Rock support. I'm gonna click on news categories, cafe, news, casino, featured gaming, etcetera, etcetera. So this particular field has been mapped to our actually is it this field? It's either this field or it's one of these fields. Actually, yeah, no, I think it is this field. OK. No, hold up please. Uh, here we go. It's been mapped directly to the Seminole Hard Rock support tagging section. So this namespace is showing all of these. Of course, in the future, if that's something that you want to change so that way it defaults to just news categories only, that's of course something that that could be. Configured by editing the content fragment model. In this case though there were some I think flexibility involved so that way I could choose other tags, but in this case I'm just going to choose some specific news categories and just hit select. All right, all right. So now I have three tags associated with this, of course, my article's title. And then my publish date. And my image I'm going to leave blank my excerpt this text excerpt. This is my description. This is additional content, a different page. I'm going to fill in the author field, but I don't think we're currently using that. And then we also have here some additional tags which are different from categories and then we also have the page path which is. When you create your new news article, all all this particular content that we've stored here will be displayed on that. So I don't have the page path yet, so I can't put anything. And again, the LD JSON field is something that's on our content fragment models, I think all of them. This was a requirement, I believe, for SEO purposes, so I'm going to leave it alone since we're just like training right now. But I do believe that there are instances where you guys have filled this out, so we could potentially take a look at that in a bit. All right, I'm just going to go ahead and save since I filled out my required fields. And now I'm going to go back to my KT news page. Age. And see how it looks. So it's not going to appear in my new search result yet. The reason why is because I have not published my content fragment. So this is my previous test article that we had taken a look at when we're looking at the default image. But it's not showing the other one that I had published or sorry that I had just made. So let's go ahead and publish that right now. I'm going to close this. And I'm going to select it and hit my quick publish close. And if I

refresh this I should now see two articles. Here we go. Test article.

This excerpt test. This is a test article. This excerpt. I know this is the right one because I have the tags I selected. So in case like if you guys, as you guys are adding these articles and since you guys are working on these, you know right now, hopefully you guys have not like had that freak out moon where where did my news article go? Make sure that you publish the content fragment and then you should be able to see it on on this page and know this page. Not published, so no one else is seeing it. I'm just viewing it within my author. OK, so I can see this here and when I click on read more. I shouldn't open this in new tab. Let me refresh. OK, when I click on view as published and then I'm going to click on read more. Is it this one or is it this one? Uh, OK, I know what I did wrong. OK, so. So right now read more is not going to do anything yet. The reason why is because if I were to look at my content fragment for either of these, the page URL, the page path that has not been published, the page path is not does not have any value. It's opening up my KT training article. There's no, there's no page path, so there's nothing for me to actually go to. So that's why the read more button's not working. Sorry, I'm gonna close out. Let me close out a couple of these tabs first. All right, so let's stay here. Yeah. OK, cool. Um, so how do we, how do we get those read more's to actually go to a specific details page? Let's go back to our site's view O here, as the chart says Cororate careers EN. Here's my news page. I am going to create a new page and I am going to select news page. So here's all the available templates I have. I'm going to select news page. I'm going to click on next my title. I'm going to call it KT article. Oops. And I'm going to click create an open. And on this page I'm going to click edit the this particular news page template. What it does is it's going to have a the header and footer that gets automatically pulled in. You can see this experience fragment which is pointing to a specific image so. By default it's going to show whatever is in this experience for me. You can change it if you need to to something else, but this is I believe this is what was established for the corporate site. Of course, if you guys are trying to use this in other places, you can certainly customize it to be a different image. We also have our breadcrumb functionality here. We have a news content fragments component. Another experience fragment is just listed here in case you guys need to show, say like specific texts that's shared across articles. This is one place to put it. Then we also have our related posts component which will be pulling in any articles that have similar categories or tags. And then on the right we have this new search component. We have this category listing component and then we have another category listing component, but it's displaying different tags. So let's break down everything that we see on this page. But first starting with our news content fragment, I'm going to click here and I am going to select which content fragment I want to display. Display. In this case I want to display my. Training

article that I just made and you'll see here display mode multiple elements being. I just want to show everything from here. Variation. I'm not going to touch it. There's I don't have any variation for this content fragment. I don't necessarily need to fill out the ID field. The searcher page search result page though I do need to fill out since it's a required field. Since I have not set up a search result page for my little test site. Currently I'm just going to point it to the existing one underneath corporate, but that's that's just for right now because I don't have that set up. Up. And I believe that's located here on log and search. Here we go. So this is just temporary, but we're going to also set one of these up for my little training site. So select. And hit done. So now this is going to show everything that was stored in my news content fragment. We can see here all those different categories that I applied, the date, the social share also automatically gets added and then here is the description portion that I had. And then the additional content, which is something that's only displayed on this page. That's why I put that note to myself. So all that is here. So this portion's configured. I'm going to ignore the experience fragment for right now because there's nothing that I care to display from the experience fragment on this page. For related posts, let's configure that. By default you're going to have the placeholder of related posts as the title. This could certainly be changed to say like related articles or other news or whatever it is that you want. Right now we're going to be displaying up to three cards at a time. I point to my content fragment path. I'm going to choose EN. And then I can have a default image if I want to, but for right now I'm just going to hit done. Yes, Carlos, go ahead.

Carlos Aldana 37:24 Daniela, at some point, for example that path or the one for the search option, those paths at some point are going to be set by default. So do I I don't have to look for that?

Daniela Tea 37:25 Mhm. Mhm. So keep in mind that what I'm showing is if you were to set up a completely brand new news page right for like a say like a hotel or say a like for the career site. Since we don't know exactly what you guys want to do, like where this is located, This is why it's required for you guys to configure this. However, what you're asking though is as you're creating new news pages underneath the same location, you're wondering, can that actually be filled in in advance? So that way you don't have to worry about it. Is that correct? Yeah. So right now it's it's not filled in because again, like we didn't have any default values for this depending on where you're using this. But I can understand what your use case is. I think I would capture that as a gap.

Carlos Aldana 38:18 Yes, yes.

Daniela Tea 38:34 With the desire to have a search result like certain fields, identify which fields would make sense to be essentially have a default value and establish like you know. Obviously if you're like if you're setting something up new for the first time, there can be no default value because it doesn't know exactly where you're trying.

Carlos Aldana 38:43 Mhm.

Daniela Tea 38:54 Where the location is, right. So these are the kinds of requirements that would we would want to understand and that's why we want to make sure this is captured for the gap. OK, yeah, no, but that that's a I agree though. I understand where you're coming from, so.

Carlos Aldana 39:04 OK. Thanks.

Daniela Tea 39:09 OK. Yeah. And so it sounds like also like like related posts, you know, so this is like what I would capture as well. If you know that the CF folder path would be the same for all the related posts and that you would eventually want that to have a default value, that would totally make sense. So we want to make sure that that's also captured. All right. So, yeah, go ahead. Sure.

Edwin Aquino 39:28 Yeah, Danielle, Danielle, sorry. I'm just thinking like if there's maybe some kind of logic that could be applied since we're creating this article underneath, you know, the Hard Rock page, it should note that it's coming from that path directly. That's the kind of thing that is that something that could possibly be addressed in the gap as well?

Daniela Tea 39:38 No. Yeah, that's that's exactly what I mean. Like if you guys know anytime you create this news page under like you're you say, OK, yeah, I know it's going to be in this specific location. That could be the established default value and then that's what you would want to be stored, right? Yeah, that's exactly what I what we would want to understand. Mm-hmm.

Edwin Aquino 39:58 Perfect. Yeah, cool.

Daniela Tea 40:03 Awesome. Yep. OK, so right now you can see I have no related posts and the reason why is because the other section where I was sorry, this particular folder path only has two articles and they don't have any overlapping categories. I'm going to actually change this really quickly to cororate and see if anything OS U. OK, Yep. So you can see now, yes, related posts is working because these particular items match the categories I have associated with this article. So that's, you know, just wanted to show that. So that way you guys understand how related posts like the logic for that in this case though because I'm pointing it to my little. Training folder, which has nothing in it. Basically that's why you're not seeing anything. But of course if I add more articles and such and

had matching tags and this would surely be displaying things up to three items, since that's what's been configured. All right. The other things that you would need to configure on this page would be the search right now again, because this was specifically only for the corporate news. That's why this was the default, but this could certainly be one of the things that would totally make sense. To change this instead to whatever the site that you are in to default there. I kept it this to to this one right now just because I don't have my search result page set up, but this is also something I would envision you would want to capture in your gap. Then here we have our category listing. Open this up and see the titles as categories. My search result page. Again, I'm pointing it right now to an existing one, but this is something I would change depending on where I created this specific page. My listing type. I have the option of either categories or archives. In this case I'm choosing categories and then I'm saying OK, find anything within this path that's been chosen and display all the categories that are in there. So if I were to change this to my. Little training folder. This is this should be a lot smaller. Yeah, so now it's pulling in, looking at all the content fragments in my little training folder and extracting all the tags that were within there. And so if we recall I used three tags in this one. The other one I had applied Caffe News and Casino News. That's why these are appearing here. And finally with this archive section. Same component category listing. It's just that archives is the listing type for my content fragment list path. I am again just going to change to KT and we can see what gets here. So right now you can see it's it's just showing EN like there's like I don't. I don't really, again, I don't really have anything associated with that. So that's why it's it's not actually like showing much. If I change it back to like say corporate, we're going to see where is it? Actually, I don't think it was at corporate level. I think it was at the news level. Yeah, OK, so these specific you'll see here. This is showing Roxino, KT Hotel and corporate. This is showing the folder structure that's listed here. I think if we take a look at the hardrock.com site. And we look at blog, which I have over here and see what it's like currently on production. So the archives are displaying the different years. I don't have the years necessarily set up like that on mine. But let's see. Yeah, so on this particular page apparently is configured a certain way, and then on some other pages it looks like it might have been configured differently. I'm just pulling up some other ones, but this is configured at both the. News article page level on the news on the news page template. This is the news page template and then also on the news homepage which is when you view the news website. So this is the news page. And then this is. This is the this is the news page template, but a lot of things are shared between the two with the sidebar and then of course like the header. So there's gonna be a lot of similarities between those two

templates, however. The news page is for one specific article, whereas the news homepage is for when you were displaying all the news. OK, so that is the yes, Edwin, go ahead.

Edwin Aquino 45:04 So I just wanted to go over a few things on since you know it looks like we covered a bit with the new page template. So I'm just gonna back back up a little bit. When we do the create title, is this impacting anything like is this creating the impacting the metadata or anything like that?

Daniela Tea 45:08 Yeah. Yes.

Edwin Aquino 45:20 What? What is this crew impacting?

Daniela Tea 45:20 When you say. Which title are you talking about? This is a test article or the the?

Edwin Aquino 45:23 Yeah. Let me first create the page, right? When we're creating this page, right?

Daniela Tea 45:28 OK, I see. So if I were to take a look at my properties, so the title of my page is KT article. So ideally what you would do in my case I didn't, but ideally what you would do is this would likely this is likely what you would want the title of the page to be. I would imagine right?

Edwin Aquino 45:37 Yep. Mhm.

Daniela Tea 45:48 Visit as article. So when you're creating the page and I believe I saw you guys were doing this essentially copying whatever you have in the content fragment and then when you create the page with the page title and such, that's where you just, you know, paste it here. So that way everything is all matching for like SEO purposes, right? Like the title of the page as well as like the each one that's on the page. So I think that's what you guys are doing right now. In my case here, I was just putting something for knowledge transfer, but from a practical standpoint, I think you guys are likely just going to copy whatever the title of the content fragment is.

Edwin Aquino 46:23 OK, great. And I'm just trying to go through a few things here under page properties. If we go back to that, the more titles and description, what what is the page title used for and and like where what what is this being used for?

Daniela Tea 46:24 Yeah. Yeah. Yes, sure. Yeah, yeah, sure. And actually I yeah, one second. I want to pull up the documentation for that cause it does a pretty good job. I I hope it, I hope you would think it does a pretty good job of how it breaks down. But I think we saw, I believe I saw in some instances you guys are using.

Edwin Aquino 46:41 Is this the meta?

Daniela Tea 46:59 Different values for here. To be clear, if you leave it blank, it will always default to whatever like the title is. So you'll see here page title is typically used by title components. So when you put a title component on the page, it will take whatever's listed in here and it's going to be the default value for your title component which you can. You can of course change later. However, in most cases, like I think I've seen a lot of instances where this is usually left blanked and then just defaults whatever you have in this section here here for navigation title second. So it says here you can specify a separate title for use in navigation. For example, we want something more concise. If empty, the page title is used, this is empty again, so therefore it's defaulted to KT article. So when we're talking navigation, like if you're like trying to surface up like a list of a list of pages, or perhaps I would say like in the navigation itself and you don't want to have like that long article name. Or something. If you need something different, you could store that value here. And so that way if this, you know if this has anything there, it would it would default to this one versus just looking at the title and displaying that instead. So if you leave this blank, yeah, yes, exactly. That's exactly right.

Edwin Aquino 48:09 Basically like like like a breadcrumb or something like if you wanna use it in a breadcrumb or yeah.

Daniela Tea 48:15 And then subtitle. So I think this here I know the subtitle for your sub page is kind of vague, right? I believe we can actually put something here. This is the subtitle and then let's take a look at the page and see where it displays training, but we'll take a look at that in a second. And then of course the description this I believe would. Would be what's displayed like in say like the like Google search results or whatever if you have something here. If not, I believe it takes like the first, you know, paragraph or however many characters from whatever's on the page itself. So let's take a look at where subtitle shows up. I'm going to view as published and I am going to actually inspect it. And I'm just going to type in subtitle and see what pops up. OK, so in here. Let's view source. Hmm. Well, I did save it here. All right, let me take that one back then.

Edwin, let me get back to you on that one. Let's save it. This is the subtitle training. Yeah, let me get back to you on that one, because now I don't think so to be to be. Perfectly candid with you. Typically like when when I see pages created, most people might fill up page title or navigation title or just the title itself in the description. I don't there's I, you know, I haven't seen subtitle being used on like. A lot of sites, but I want to get back to you on exactly where that is, pinpoint that and then show you that way. If you guys do use that field, you understand what the purpose is, OK.

Edwin Aquino 50:14 OK, perfect.

Daniela Tea 50:15 Yeah, but alright.

Edwin Aquino 50:16 Alright. And then can we go over a few more things with the news content fragment if you can? Um.

Daniela Tea 50:19 Go back to. Back U and we can take a look at the content fragment itself.

Edwin Aquino 50:28 Sure. I just didn't wanna interrupt your flow of, you know, going over the content.

Daniela Tea 50:29 Um. No, no, please. This is great. I just wish I was better organized with my tabs. OK, assets. Let's navigate back to our news. OK, go ahead.

Edwin Aquino 50:45 So with the content fragments, I see that we have a a published date for that. Is that specifically related to when the article will go live on the website or is that just when we want to display that information?

Daniela Tea 50:50 Huh. No, but yeah, that's just so you'll actually notice if I go back here, if I go back to the home page of this. Oops, didn't do that right. OK, if I go back to the home page of this, you'll actually notice this particular article's displaying, even though it says February 23rd, today's February 20th. So it's for display purposes. However, you know, keep in mind that there is that publishing functionality. So for let's see here. Um. Oops. So when you manage publication. You can schedule that, but the actual published date that you are selecting within the content fragment itself is for the like display purpose. Like it's essentially the date of the article, right? So it has nothing to do with scheduling within the content fragment itself, OK.

Edwin Aquino 51:55 It's just for displaying and if we wanted to add the time, we can always update the content fragment model to include the time as well.

Daniela Tea 51:57 Yeah, it's for display. Uh, yes. So right now I think we had defaulted the value to just be date, but if I'm not mistaken, you should be able to set like you know, date, date with time, that sort of stuff. Yep.

Edwin Aquino 52:15 Perfect. Alright. And then could we do a little bit deeper dive on the new search functionality? Um, what exactly is triggering the results here specifically when we use this component?

Daniela Tea 52:20 Yes, sure thing. Yeah, so this particular component and let's create a new search page and then we can see and then I'm going to update this to instead of pointing to this version, this corporate version will point to my new one. Alright, so let's go back to. I'm going to close out of literally everything, if possible. OK, so this is here. All right, perfect. I'm going to create a new page under my KT news home and I am going to select news search template. OK,

next this is my KT search. And OK, right create. All right, the page has been created. So on this particular template. As I mentioned before, things are going to be, you know, shared. It looks very similar to the news page template and also the news home page that we were just looking at just now. In this case here though, what is different is this news search result component. So if I were to take a look at that, I can see I can configure things such as how many results do I want on the page before pagination shows up, right? Older post label, newer posts, the no results found message, the read more text. I'm pulling in the content fragment path where I want all my articles to be. In this case I want it to all be within that KT folder. Yeah, let's do this all right. And then setting that default image here. Um, let's just choose anything. Yeah, sure. OK. And then I'm gonna put 5 results per page. And this is this seems weird, right? The search results page. It's like, wait, am I going to be pointing to myself? And I actually need to check this one here, but for the time being. I'm going to put where I have this page created which is. Select. All right, done. OK. All right, so now I can see that my articles from that specific folder are displaying here and that you may think, OK, well, well like like what is the purpose of that here? Like this seems to look exactly the same as what is on our home page. Let me pull up the home page for reference. This is the homepage for reference and it is using the exact same component. However, as you're searching when you're searching on the new search, instead of it taking you back to the homepage, you can see there's some additional stuff on this homepage. There's. Like the featured news, which you can put here. And then there's also I think, I believe there might be some additional components or text or something that you guys might have present on the news homepage. So instead of having, you know all this information here at the top. Before your users actually get to the news search results. That's why there's a separate page which essentially like see it removed everything else from there and it's literally just showing the new search results. So now if I were to. Change my KT News home new search component and point to my. Age that I just created. Done. And if I were to view this as published. And if I were to try and search up the word. Wish I didn't use the exact same things search. This should take me to the search page I just created and you can see I search for this and it's showing my this is a test article and you can see it took me to A to the search page itself and not like refreshing the home page. And also keep in mind I had selected a different default image. That's why this is here, because this particular content fragment did not have an image associated with it and I said it at the component level. So I guess Edwin for your question about what's the purpose of the search, just to make it clear. Page is slightly different from the whole page in the sense that it doesn't have any of this other stuff on top and it's basically bringing the search results to you like you know, like immediately versus having like the featured news and anything else that might appear on top of this component.

Edwin Aquino 57:31 Yeah, not not necessarily the purpose. I was referring to what is pulling in the actual content. So is this similar to the search query we were looking at earlier where it's checking everything on the content fragment, whether it's the categories, tags, a title, everything? What is it pulling in?

Daniela Tea 57:38 Yeah. I see. So search itself. Oh, like what is the actual this part here looking for is what you're asking. OK, if I were to search an excerpt, I do believe it is indeed showing or pulling in.

Edwin Aquino 57:50 Yes, correct. Yes.

Daniela Tea 57:59 Oops. One second. Oh, did I change it back? I change it back. I don't know if I changed it back or not. It should

be based off of the things within the content fragment, right? So like whether it's in the title or whether this is the, this is the excerpt, and then there's also a description field. See here. This is take one second. One second. Let me go back to my search page.

Oh, I didn't. OK, I didn't configure it on my search page. That's why it's doing that. OK, all right. Alright, so now if I were to go back here and let's take a look at searching for the word excerpt this time to show that it should pull in this result because it's the search is looking also within that field as well. OK, so it's not. So it's not pulling up. Sorry. Must then just be the title. And the description, I believe let's pull in. Let's pull in the description. I want to see what the description is and we can take a look at. We can put actually a specific term there to confirm that that's showing up. Let's say property. I'm just putting. I'm just putting some of a term here that we can reference and I'm going to hit close. All right, let's now publish this. And I am going to refresh this again and we're going to search for the word property.

Edwin Aquino 1:00:02 Can we also see if this is pulling in possibly tags like reverb or or something? I know we have tags that we could just click. I'm just curious what else is being pulled in here.

Daniela Tea 1:00:05 Yeah. No, sure, we can. We can certainly let's let's. I think that's a good, it's a good way to be able to confirm what you're expecting.

Edwin Aquino 1:00:17 And and how are we adjusting this exactly? Like what if we wanted to change how the search is being populated? Is there any kind of is this functionality being built in already into the component or is there any? Yeah, how are we changing this?

Daniela Tea 1:00:30 Let me pull up the ticket really quick. I believe for this one this would be something that's within the components functionality, so that would be like a a a code change, but one second. I'm waiting the search component and we can take a look at what was captured for that. But to your point though Edwin, I think like for this

here understanding exactly what should you know be tailored for the search like. You mentioned tags and like I guess you know that that's certainly something that could be added, but keeping in mind, you know like is that something that you would want to see here? So like you might feel a lot more than you're anticipating if something was tagged a certain way. So I guess identifying you know like which parts of the content fragment model would you want to?

Edwin Aquino 1:01:19 Yeah.

Daniela Tea 1:01:25 Want to surface up in the search, like perhaps just the title and the description or the title and the actual article, the tags and the excerpts. So taking a look at what you guys want, that can certainly be adjusted, but that would that would have to be a code change.

Edwin Aquino 1:01:41 Yeah, and it's just, it's just because it's not very intuitive as to what it's actually doing, right? It doesn't like any kind of like keep a tool tip or anything that's telling us exactly what it's searching for. So if anything, just things to make it more clearer for the end user, that'd be perfect, honestly.

Daniela Tea 1:01:45 Yeah, understood. Mhm. I know, I agree. That totally makes sense. Um, so let's take a look here. I'm just taking a look at at what was captured here. So it's based off of keywords is what it says against the title, the excerpt and the full body. That's what the keyword search should be is title, excerpt and full body. So if I were to. Type in and this is. So if we are seeing that the excerpt text is not appearing on here, Yep, alright. So the fact that this is not appearing is something that I would want to investigate a little bit more. It might be because of the content I have in my content fragment. Because I kind of put, I kind of put like, you know, bare bones test data. But the intention for this is supposed to be those three different fields. So this, this and then also the body. But this is something I'll have written out as a take away for us to investigate and confirm since that is what the search bar is supposed to to. Work against and to your point about a like a tool tip or something, depending on what you guys decide, like how you would want this search to search against, maybe it's more than those 3 fields that can you know within whenever that code change is made, a tool tip could certainly be added with that information so that way the. End user knows what they're searching against too. Yeah, all right, so I have this one as a take away. Anything else but the news search. I also want to cover the news homepage template since that's also a that's a different template and that's something you would need to do to set up a news.

Edwin Aquino 1:03:26 Okay, perfect. Thank you.

Daniela Tea 1:03:42 section in any other site. Anything else about this search page?

Edwin Aquino 1:03:48 Um, finally, one last thing is where do we add the category? How do we add additional categories that we can select from?

Daniela Tea 1:03:50 Yeah. OK, yeah, sure. So categories are going to be added in in the tag section. So if we were to go back to our little hammer and tagging. And I'm choosing Semo Hard Rock support. As we saw, you know when you're creating an article, you have the option to select from any of the tags that are located within this namespace. If you're trying to add a new tag to like say the news category, so that way this is available like one of the options available. You'll click create, you'll create tag and then you would put whatever the title of the tag is here and then that would eventually. When I say eventually I mean like it will be available then to people who are creating new content fragments, you would see that tags an option to select. So anything that any article that has that tag would then appear in this section.

Edwin Aquino 1:04:50 All right, perfect. Thank you. That's it for me.

Daniela Tea 1:04:51 Yep, yeah, sure thing. OK, OK, I'm going to now switch on over to my homepage template. I'm going to create a completely brand new one so we can see, you know, again, the process of if you have to do this for, say, a new site. So here I'm going to just click create and click on page. So I see that option for news homepage and I'm going to hit next. OK. I'm going to hit create. OK, so creating a completely new homepage, this is what's going to look like. It's pretty empty and so it's basically the the portions of the site that you need to configure like we saw earlier, setting the new search categories and archives to point to where you need it to point to setting. New search results to point to the content fragment folder path that you need to when filling out this information. But the main difference between the news homepage and the new search is that you have an area to feature some news. So as we see on our homepage here on the Hard Rock blog homepage, we have this section for the title News and Press Releases. Right now the title is defaulting to what I need it. However, as an author, I have the ability of course to configure that with whatever title I need. And then here in this section this year we had the featured news that again title for you to put whatever you need, featured news or featured articles, whatever it is. And then the ability to select exactly what you want to feature. So in this case here this you can see. That this isn't necessarily going to be the most recent ones. It can be things that you specifically select, or if you did want to be the most recent ones, you could. You could do that too if you always wanted that to show up here. Just keep in mind though that. Whatever. Like if you set it to be like, you know, show most recent, then that of course will change without you intervening with it. So if

you really want to just say like pin a news article, then you would want to select that like fixed list or something like that in order to make sure it's showing exactly what you want versus changing out. Out without your own control. So just some options here to be able to feature articles is really the main difference, but just this is one of the parts of the news portion of your site that you need to take into consideration if you're creating it for a new a new property. So any questions like what the purpose of this news homepage template is? OK. OK. OK, um, let's take a quick look at our agenda. All right, so we have our news homepage template, news page template, new search page template. Then we saw the news content fragment. We saw our new search which is used on a couple of pages, the category listing, the social share which is on the article page enabled by default. That can certainly be turned off if that's something you want to do related posts and how it pulls in based off of the article's category tag and then also the news search results component. So these this here new search this was. Let's see this here is that new search here, whereas new search results is this section here. So I know that might be a little confusing, but if you look at the titles of the component you would see that's what this this is referring to as new search and this here is new search results. OK, um, let's see. So any questions about news, anything that was covered today or any questions about say, setting up a new section for a completely new website or property?

Edwin Aquino 1:09:16 Just one thing regarding the social sharing. How does that information get populated and what exactly? How do we edit this information?

Daniela Tea 1:09:19 Mhm. Alright, let's take a look at social share in one of these pages. Alright, so I'm going to open up one of my knowledge transfer articles. All right, so social share this as mentioned before, this particular component is just part of this this news content fragment component. So when you fill out the news content fragment component, this will also appear. When I configure it, I can see I can enable Twitter, Facebook and Pinterest. I realize maybe you guys might consider wanting to change it from Twitter to X, but keep in mind this is only shown to the authors. But if I were to say what the author can do is if I were to uncheck these. And that would remove those options from displaying to the end user. So if you guys decide, oh, I don't actually want this to be shared on Pinterest for whatever reason, you have that flexibility of removing that specific social media icon. But your question was like what? How does it share? Is that is that correct? Correct.

Edwin Aquino 1:10:32 Yeah, So what is exactly pulling in from the article? Is it pulling the article title? Like where is this information being pulled from?

Daniela Tea 1:10:36 Right. So I wish I could log in. I don't actually have. Yeah, I don't have. OK, so this is supposed to be pulling in from some information that's, you know, within our basic tab. Let me see if I can. For this one, Edwin, I might want to create because I don't. I'll be honest, I don't have X so I can't show you exactly how it works, but I don't mind creating like an account for the purpose of that. But I can show you a screenshot of like how that's being shared and like point that to. The specific properties that's coming from. So for example likely going to be like the title and the description as well as on this images tab you have the ability to set a specific image that's associated with that. So like. These fields are not required because you don't you might not need it for other pages. However, these tabs are available. So I want you to keep in mind though that I am planning on going over page templates a little bit more in depth. I'm trying to see if I can. Put that as to one of the sessions next week. I would like to go over, you know like the the custom tabs that we had added as well as the different page templates and then also like you know how do these come into play when it's like shared across other sites and other platforms. So we'll definitely get more of that. And by then I will make sure I have my X account created so you can see what that looks like when we're sharing these pages across social media. Does that sound good? Yeah. OK, Yep, absolutely.

Edwin Aquino 1:12:19 Perfect. Yeah, that sounds great. Thank you.

Daniela Tea 1:12:24 OK, um. Anything else? Try to take a look here to see what like, since I know you guys are already using news, it's like, yay, you guys, you guys are probably already pros at this. Yeah, so like, you know, I can see this news, new news article February 5th. Yep. So just to keep in mind, and this is what I meant about like, you know, if you guys ever have content, going back to our discussion yesterday, if you guys ever have content that's like potentially going to be reused across multiple articles. That's when we would recommend, you know, using like an experience fragment. Say this, say this here in particular. I know it's probably not going to be shared across all these articles, but say this was something that's a constant on every article. It might make sense to put that within the experience fragment and then just reference that experience fragment with. In the article page itself, and then if this ever changes, you only have to change it in one place.

Edwin Aquino 1:13:26 Perfect. Good to know.

Daniela Tea 1:13:29 Yeah. All right. OK, guys. Anything else before we wrap up? I know it's Friday afternoon, so I don't want to keep you guys too long, but happy to take a look at anything else if you guys have any questions right now.

1:13:45 No.

Lucas Nelson 1:13:49 Hey Daniela, it's Luke. I scheduled the remaining sessions for next week and the three days of the following week for content authoring, and then I also scheduled the adoption sessions.

Daniela Tea 1:13:51 Hey. OK.

Scott Sorel 1:14:04 Mhm.

Lucas Nelson 1:14:06 Uh, starting the end of the week after next. Um, so those are on the calendar. Um, we'll we'll.

Daniela Tea 1:14:10 OK. Let me let me flash up the calendar really quickly then. Luke, one second. OK, I'll pull that up.

Lucas Nelson 1:14:16 Yeah, and we'll we'll owe agendas on the invites, Daniela. OK, OK.

Daniela Tea 1:14:22 Yup, understood. So yeah, let's let's take a quick look to see what we have ahead. OK, Yep. So let's see. We are here. So next week's gonna be all content authoring and then the week after, like you mentioned. OK, Yep. So I see the first adoption session is going to be on Thursday, which also coincides with the beginning of the.

Lucas Nelson 1:14:42 Yeah.

Daniela Tea 1:14:51 Um, technical knowledge transfer.

Lucas Nelson 1:14:51 Yeah, and and the other comment there is Scott and I are working in the background. I'm gonna schedule those technical enablement sessions. So Andy, perk your ears. It's gonna be from 9:00 to 11:00, the 5th, Thursday the 5th through Thursday the 12th. That's the two hour blocks that we're going to cover those technical enablement sessions. So you Yep. So we'll see those on the calendar. And then last but not least, we'll have the platform expansion discussions on the calendar as well for the two weeks on the last part of the schedule.

Andy Lambert 1:15:15 Sounds good.

Daniela Tea 1:15:28 OK. And to be clear, these are going to be in the afternoon as well as the adoption ones. It's just strictly the technical knowledge transfer ones will be in the morning.

Lucas Nelson 1:15:32 Yeah. Yeah, just because we want to include Vinay to to co-lead those with Andy given the context he has. So Yep, I just wanted it was housekeeping at the end of the call. That's all I yeah, I'm, I'm sorry to be the guy to schedule a Friday afternoon call. So you know you can blame Luke for that.

Daniela Tea 1:15:39 Yep. Yes. Yeah, that's good.

Lucas Nelson 1:15:54 Uh, but if there's no other questions, appreciate your time everybody and have a great weekend.

Daniela Tea 1:16:00 Thank you, everybody. Goodbye. Thank you.

Edwin Aquino 1:16:00 Have a great weekend, everyone. Thank you, Daniel. Thank you, everyone.

Shirley Madera 1:16:03 Thank you.

Scott Sorel 1:16:03 Great. Thanks, Luke. Thanks, Danielle. Good job.

Lyon, Rick (Director of Digital Experience)** 1:16:05 Thanks everyone.
