

SHRSS AEM Best Practices Library

This folder contains the SHRSS AEM as a Cloud Service best-practices library, organized by role and depth of responsibility.

All documents are intended as **deskside references** and **training material for agentic services**.

Folder: SHRSS-AEM-Best-Practices/

Output format: PDFs generated from the corresponding Markdown sources using

SHRSS_Adobe_Word_Template.docx.

1. Volumes Overview

- **All Roles – Platform & Shared Practices**
./SHRSS-AEM-Best-Practices-All-Roles.pdf
- **Engineering – Developers & Technical Architects**
./SHRSS-AEM-Best-Practices-Engineering-Developers-and-Technical-Architects.pdf
- **Admin & DevOps – Operations, SRE, Platform Engineering**
./SHRSS-AEM-Best-Practices-Admin-and-DevOps.pdf
- **Authors – Content Authors, Content Designers, Product Owners**
./SHRSS-AEM-Best-Practices-Authors.pdf
- **DAM – DAM Architects, Librarians, Asset Stewards**
./SHRSS-AEM-Best-Practices-DAM.pdf

Each PDF goes deeper than Experience League, but **anchors to public docs** for terminology and conceptual alignment.

2. SHRSS-AEM-Best-Practices-All-Roles.pdf

Path: ./SHRSS-AEM-Best-Practices-All-Roles.pdf

2.1 Purpose

This is the **platform-wide reference**. It provides:

- Core AEMaaS concepts (architecture, multi-tenant model, immutable runtime, content repository).
- Cross-cutting best practices that apply to **all roles**:
 - Security, IAM, permissions and governance.
 - Content modeling concepts shared across Jobs, Events, News, Locations, Careers, etc.
 - Indexing & performance basics (with deeper details in the engineering + admin volumes).
 - Common terminology and SHRSS domain language.
- **SHRSS-specific overlays** that explain how the general principles are applied in:
 - SHRSS Jobs/Events/Careers/News/Locations/Shared Data.
 - SHRSS authoring experience and component library.

- SHRSS indexing and caching strategy.

2.2 Recommended audience

- All technical stakeholders (devs, architects, admins).
- Product owners, content leads, DAM stewards who need a **big-picture view**.
- Any agentic service that needs a **canonical understanding of the SHRSS platform**.

2.3 How other volumes relate

- **Engineering volume** extends the “Development & Indexing” concepts from this all-roles volume with deeper code-level practices and examples.
- **Admin & DevOps volume** extends the “Operations & Governance” chapters (Cloud Manager, RDEs, pipelines, observability).
- **Authors volume** deepens the “Authoring & UX” portion with component-level tips, workflows, and editorial patterns.
- **DAM volume** deepens the DAM/metadata chapters and applies them to SHRSS’s Jobs/Events/News/Locations asset flows.

3. SHRSS-AEM-Best-Practices-Engineering-Developers-and-Technical-Architects.pdf

Path: ./SHRSS-AEM-Best-Practices-Engineering-Developers-and-Technical-Architects.pdf

3.1 Purpose

This is the **deep technical volume** for:

- Back-end & front-end developers.
- Technical architects and lead engineers.
- Anyone designing or reviewing AEMaaCS solutions and integrations for SHRSS.

It includes:

- **AEM technology stack deep dive**
Sling, OSGi, JCR/Oak, Granite; how these surface in AEMaaCS with containerization and shared data stores.
- **AEMaaCS development principles**
 - Stateless + cluster-aware patterns.
 - Immutability and separation of code vs content.
 - Run modes, OSGi config patterns (`ui.config`, environment variables, secrets).
- **Component & template best practices**
 - HTL & Sling Model patterns (and anti-patterns).

- Core Components extension strategy and how SHRSS uses them across Jobs, Events, Careers, News, Locations.
- Layout, policies, and responsive behavior from an engineering perspective.
- **Indexing & query design**
 - Oak index internals, Lucene vs property indexes, ordered properties.
 - Customizing OOTB indexes (damAssetLucene) and adding project-specific ones.
 - Anti-patterns that cause performance issues and pipeline violations.
 - Mapping SHRSS query patterns (Jobs search, Events, News, Location proximity) to index definitions.
- **Integration & API practices**
 - External systems (Workday, TransPerfect, mapping, reservations, etc.).
 - Patterns for robust, observable, fault-tolerant integrations.
 - Patterns for headless/API consumers using CF + GraphQL.
- **Testing & quality**
 - Unit, integration, and UI testing patterns wired into Cloud Manager.
 - How to structure tests around SHRSS's modules and domain model.

3.2 SHRSS-specific overlay

This volume includes a **dedicated “SHRSS Overlays” chapter** that:

- Maps **SHRSS domain models** (Jobs, Events, Locations, News, Careers, Shared Data) to:
 - CF model structures & relationships.
 - Index design decisions.
 - Custom Sling Models & components.
- Walks through **real SHRSS examples**:
 - A Jobs listing query and its custom index definition.
 - An Events listing driven by CFs and GraphQL.
 - A Location search with facets or geo-like filters.
- Documents **custom code patterns**:
 - Shared libraries/utilities used across SHRSS features.
 - Custom validators, schedulers, workflows, and integration services.

3.3 How to use this volume

- As the **primary deskside reference** for engineers implementing or refactoring SHRSS features.
- As core source material for **agentic code assistants** working on SHRSS repos.

- In combination with:
 - SHRSS-AEM-Best-Practices-All-Roles.pdf for shared concepts.
 - SHRSS-AEM-Best-Practices-Admin-and-DevOps.pdf when designing deployment & operational characteristics of code.

4. SHRSS-AEM-Best-Practices-Admin-and-DevOps.pdf

Path: ./SHRSS-AEM-Best-Practices-Admin-and-DevOps.pdf

4.1 Purpose

This is the **operations and platform engineering volume**, aimed at:

- AEM administrators and platform owners.
- DevOps / SRE / Cloud engineers.
- Technical architects responsible for **environments, pipelines, security, observability, and incident response**.

It covers:

- **Environment model & topology**
 - Dev, Stage, Prod, RDEs, specialized environments.
 - How Author/Publish/Preview, CDN, and Dispatcher work together in AEMaaCS.
- **Cloud Manager & CI/CD**
 - Pipeline types and steps.
 - Quality gates (code quality, security, performance).
 - Promotion flows and rollback strategies.
- **Security & access control**
 - Admin Console IAM → Product profiles → AEM groups & permissions.
 - SHRSS role mappings (authors, approvers, admins, technical accounts).
- **Operations & observability**
 - Logs, metrics, Developer Console.
 - Troubleshooting workflows for slow pages, errors, cache issues.
 - Backup/restore, content copy, and operational constraints in AEMaaCS.
- **Indexing & performance (Ops view)**
 - How to monitor index health and query performance.
 - How to respond to “query without index” alerts and performance regressions.
 - Operational side of deploying new/changed index definitions reliably.

4.2 SHRSS-specific overlay

The Admin/DevOps volume includes an overlay section that:

- Documents **SHRSS environment topology** (per environment) and:
 - Intended usage per environment.
 - Which SHRSS features are enabled/tested where.
- Captures **SHRSS Cloud Manager setup**:
 - Branch → pipeline mapping (how code flows to DEV/STAGE/PROD).
 - Where integration tests/UI tests run for SHRSS features.
- Provides **incident response playbooks** specific to SHRSS:
 - Jobs/Events pages loading slowly or returning incomplete results.
 - Search/index issues impacting Jobs/News/Locations.
 - Problems with external integrations affecting content or author experiences.
- Clarifies **operational guardrails**:
 - What SHRSS admins are allowed to change directly vs what must go through code.
 - How SHRSS-specific configs (e.g., external endpoints, feature toggles) are managed per environment.

4.3 How to use this volume

- As the **runbook and governance reference** for administrators and SREs.
- As training base for **agentic operations assistants** (e.g., pipeline triage bots).
- In conjunction with:
 - SHRSS-AEM-Best-Practices-Engineering-Developers-and-Technical-Architects.pdf to understand how code decisions impact operations.
 - SHRSS-AEM-Best-Practices-All-Roles.pdf for shared concepts.

5. SHRSS-AEM-Best-Practices-Authors.pdf

Path: ./SHRSS-AEM-Best-Practices-Authors.pdf

5.1 Purpose

This volume is for:

- Content authors.
- Content designers and UX writers.
- Product owners who curate and review content.

It goes **beyond standard Experience League author docs** with:

- **Practical authoring workflows** for:
 - Jobs, Events, Careers, News, Locations, Shared Data.
 - Dynamic listings driven by filters, searches, and shared data.
- **Core Components tips & tricks**

- Component-level nuances and “pro” authoring patterns.
- Common pitfalls and how to avoid them (e.g., overusing rich text, misusing layout).
- **Template & policy usage in SHRSS**
 - How SHRSS templates and policies constrain/enable authoring.
 - What can be adjusted with configuration vs what requires development.
- **Content Fragment authoring**
 - Job/Event/Location/News CFs and how to maintain consistency.
 - Best practices for structured content, reuse, and headless scenarios.

5.2 SHRSS-specific overlay

The author volume includes a rich overlay section that:

- Walks through **real SHRSS pages and content types**:
 - Jobs/Careers: how to create, update, and retire job postings; how Jobs tie into listing pages and search.
 - Events: how to create event content, control visibility, and manage past vs upcoming events.
 - News: how to publish news items, manage promotion positions, and link related content.
 - Locations: how to keep location information consistent and accurate.
 - Shared Data: how to use shared data sources to avoid duplication and ensure consistency across pages.
- Provides **pattern-based guidance**, e.g.:
 - “If you want X, use Y component with configuration Z.”
 - “Avoid doing A, instead use B and C for better maintainability.”
- Highlights **authoring anti-patterns** and their consequences:
 - Overriding shared components with one-off configuration.
 - Embedding structural layout within RTE content.
 - Overuse of manual “linking” instead of shared references.

5.3 How to use this volume

- As the **primary training/enablement asset** for new SHRSS authors.
- As a **just-in-time deskside reference** for solving day-to-day authoring problems.
- As a specification for **agentic author helpers** (e.g., prompt-driven bots that guide authors through component selection and content modeling).

6. SHRSS-AEM-Best-Practices-DAM.pdf

Path: ./SHRSS-AEM-Best-Practices-DAM.pdf

6.1 Purpose

This volume is for:

- DAM architects and librarians.
- Asset managers and producers.
- Any role responsible for **asset structure, metadata, and governance**.

It provides deep guidance on:

- **DAM information architecture**
 - Folder structures and conventions for SHRSS assets (supporting Jobs, Events, News, Locations, Careers).
 - How assets relate to pages, CFs, and shared data.
- **Metadata & taxonomy**
 - What to capture, where, and how it's used in SHRSS (e.g., BY department, location, campaign, usage rights).
 - Governance for tags and controlled vocabularies.
- **Renditions & performance**
 - Rendition usage patterns for SHRSS components.
 - Best practices for optimizing asset size vs quality.
- **Lifecycle & governance**
 - Ingestion, review, approval, and archival processes.
 - Rights management, expiration, and auditability.

6.2 SHRSS-specific overlay

The DAM volume includes overlays that:

- Map **SHRSS content domains** (Jobs/Events/News/Locations) to:
 - Expected asset types (hero images, thumbnails, icons).
 - Required metadata/fields critical for search and filtering.
- Document **SHRSS-specific tagging schemes** and how they are expected to be used by:
 - Authors (for search and display).
 - Integrations (e.g., export to other systems).
- Provide **real examples**:
 - How a News image should be set up (naming, folder, metadata) to appear correctly in all its contexts.
 - How Job or Event imagery is managed, reused, and retired.

6.3 How to use this volume

- As a **governance playbook** for managing SHRSS DAM.
- As reference for **DAM automation and agentic services** (e.g., bots that suggest tags or detect misfiled assets).
- Together with:
 - SHRSS-AEM-Best-Practices-Authors.pdf for end-to-end content + asset workflows.
 - SHRSS-AEM-Best-Practices-All-Roles.pdf for high-level metadata and taxonomy intent.

7. Recommended Reading Order

For a new team member:

1. **All-roles overview**
 - ./SHRSS-AEM-Best-Practices-All-Roles.pdf
2. Then role-specific deep dive:
 - Developer/architect → ./SHRSS-AEM-Best-Practices-Engineering-Developers-and-Technical-Architects.pdf
 - Admin/DevOps → ./SHRSS-AEM-Best-Practices-Admin-and-DevOps.pdf
 - Author → ./SHRSS-AEM-Best-Practices-Authors.pdf
 - DAM → ./SHRSS-AEM-Best-Practices-DAM.pdf

Agents (LLM-based services) should also ingest **all volumes** to understand:

- Cross-cutting constraints (all-roles volume).
- Role-specific patterns, anti-patterns, and SHRSS overlays.
